Public Access to the Internet Brian Kahin, James Keller, 1995 This well-balanced collection takes up the important issues in enabling widely available access to the Internet at a time of rapid commercialization and growth. This collection takes up the important issues in enabling widely available access to the Internet at a time of rapid commercialization and growth. The 17 contributions present material that network managers, politicians and other professionals need to know in order to ask the right questions and properly analyze the various proposals that are being considered for the future of the National Information Infrastructure (NII). Chapters are grouped in five parts: the public access agenda, the sociology and culture of the Internet, establishing network communities, accommodating new classes of users, and pricing and service models.

The Internet in Public Life Verna V. Gehring, 2004 The spread of new information and communications technologies during the past two decades has helped reshape associations, political communities, and global relations. Move: How to Rebuild and Reinvent America's Infrastructure Rosabeth Moss Kanter, 2015-05-11 Americans are stuck. Americans are stuck. We live with travel delays on congested roads, shipping delays on clogged railways, and delays on repairs and project approvals due to gridlocked leadership. And when we can't move, when goods are delayed, and when information networks can't connect, then economic opportunity deteriorates and social inequity grows. We don't have to take it anymore! In *Move*, Harvard Business School professor and bestselling author Rosabeth Moss Kanter visits the business leaders, mayors, transportation advocates, and entrepreneurs across the country tackling these challenges through underwater tunnels, instant bridges, road sensors, parking apps, bike-sharing programs, seamless wifi, and much more. It all adds up to a new vision for American mobility, where local leaders and public-private partnerships lead the way. With unique insight and unrivaled expertise, Kanter gives us a sweeping look at the innovative projects, vital leaders, and bold solutions that are moving our transportation infrastructure toward a cleaner, faster, and more prosperous future.

Globalisation and Labour Ronaldo Munck, 2002-07 Intellectual fashion likes to see us as consumers, but the world of production and services still needs workers. Globalization has been driven by the transnational corporations search for cheap labour, but little attention has been paid to the consequent changes in the world of work. Ronaldo Munck argues that the national period in labour history is decisively over.

Swarming Landscapes Rob Roggema, 2012-12-02 This book advocates a fresh approach to planning that anticipates, rather than reacts to, the changes in climate currently in process. Today's spatial planning procedures rely on historical evidence instead of preparing for factors that by definition lie in the future, yet which are relatively uncontroversial: shortages of water, sea level rise and rises in average temperatures being but three examples. Arguing for more flexibility, the contributors view 'complexity' as the key to transforming the way we plan in order to better equip us to face uncertainties about our future environment.

Self-Organization and Society Takatoshi Imada,2008-04-15 Self-organization is a generic term describing the capacity of a system to change its own structure by itself while interacting with the environment. In this sense, self-organization is not environment-determined or environment-adaptive, but is self-determined and self-adaptive. The concept of self-organization was born in the 1960s, and attempts were made to establish a theory based on the logic of a system and its control. In contrast, the 1980s introduced a view based on the logic of creative individuals and on fluctuations. Antithetical differences exist between the two. The former regards the system of aggregated individuals as the object of consideration, where self-organization is the sum of the practices of a system led by control, or self-control in particular. The latter focuses on the practices of individuals deviating from the logic of a system, making the existing system fluctuate and transforming its structure. This volume attempts to integrate these viewpoints through inquiry into the structure of the self and through self-reflexion. A new horizon thus opens for the synthesis of planning/control action theory and spontaneous/performative action theory.

How States Shaped Postwar America Nicholas Dagen Bloom,2019-04-15 The history of public policy in postwar America tends to fixate on developments at the national level, overlooking the crucial work done by individual states in the 1960s and '70s. In this book, Nicholas Dagen Bloom demonstrates the significant and enduring impact of activist states in five areas: urban planning and redevelopment, mass transit and highways, higher education, subsidized housing, and the environment. Bloom centers his story on the example set by New York governor Nelson Rockefeller, whose aggressive initiatives on the pressing issues in that period inspired others and led to the establishment of long-lived state policies in an age of decreasing federal power. Metropolitan areas, for both better and worse, changed and operated differently because of sustained state action—How States Shaped Postwar America uncovers the scope of this largely untold story.

The Greening of Asia Mark L. Clifford,2015-04-07 One of Asia's best-respected writers on business and economy, Hong Kong-based author Mark L. Clifford provides a behind-the-scenes look at what companies in China, India, Japan, Korea, the Philippines, Indonesia, Hong Kong, Singapore, and Thailand are doing to build businesses that will lessen the environmental impact of Asia's extraordinary economic growth. Dirty air, foul water, and hellishly overcrowded cities are threatening to choke the region's impressive prosperity. Recognizing a business opportunity in solving social problems, Asian businesses have developed innovative responses to the region's environmental crises. From solar and wind power technologies to green buildings, electric cars, water services, and sustainable tropical forestry, Asian corporations are upending old business models in their home countries and throughout the world. Companies have the money, the technology, and the people to act—yet, as Clifford emphasizes, support from the government (in the form of more effective, market-friendly policies) and the engagement of civil society are crucial for a region-wide shift to greener business practices. Clifford paints detailed profiles of what some of these companies are doing and includes a unique appendix that encapsulates the environmental business practices of more than fifty companies mentioned in the book.
