Creating and Managing Virtual Machines and Networks Through Microsoft Azure Services for Remote Access Connection Dr. Hedaya Mahmood Alasooly,2021-02-04 Microsoft Azure, commonly referred to as Azure is a cloud computing service created by Microsoft for building, testing, deploying, and managing applications and services through Microsoft-managed data centers. It provides software as a service (SaaS), platform as a service (PaaS) and infrastructure as a service (IaaS) and supports many different programming languages, tools, and frameworks, including both Microsoft-specific and third-party software and systems. The major benefit of a remote desktop connection is being able to connect to your data from anywhere in the world. Your data is in one place that is easy to see and you no longer have to have software installed on your own computer. Azure is one of the best virtual computers and networks providers for remote desktop (RDP) connections. When you create Azure account, you pay as you go. You purchase Azure services with pay-as-you-go pricing. You pay only for what you use each month, with no upfront commitment, and cancel anytime. You must add your credit/debit card for billing to use pay as you go subscription. But I was looking for totally free subscription where I don't need to add my credit card for billing. I found there are two possible options for that: 1) A sandbox gives you access to Azure resources. Your Azure subscription will not be charged. The sandbox may only be used to complete training on Microsoft Learn. Creating the Azure Virtual machines using sandbox which is learning subscription, you can connect to the VM via RDP port but you cannot access to Internet through the Internet Explorer. 2) Alternatively Microsoft Azure provides a free \$100 credit for students accounts registered through university emails (free student subscription for around one year). There is internet access in the VM machine under this type of subscription. *Desktop Virtualization* Michael Johnson,2011 Desktop virtualization (sometimes called client virtualization), as a concept, separates a personal computer desktop environment from a physical machine using a client-server model of computing. The model stores the resulting virtualized desktop on a remote central server, instead of on the local storage of a remote client; thus, when users work from their remote desktop client, all of the programs, applications, processes, and data used are kept and run centrally. This scenario allows users to access their desktops on any capable device, such as a traditional personal computer, notebook computer, smartphone, or thin client. In simple terms, virtual machines are running on the server (for each client) and clients can connect to their computers using remote desktop software. This book is your ultimate resource for Desktop Virtualization. Here you will find the most up-to-date information, analysis, background and everything you need to know. In easy to read chapters, with extensive references and links to get you to know all there is to know about Desktop Virtualization right away, covering: Dynamic desktop, Remote desktop software, Virtual machine, Comparison of remote desktop software, Application virtualization, Workspace virtualization, Multiseat desktop virtualization, Comparison of Java Remote Desktop projects, 01 Communique, Adaptive Internet Protocol, Adobe Connect, AEP Netilla Secure Remote Access SSL VPN, AetherPal, Anyplace Control, AnywhereTS, Apple Remote Desktop, Appliance Link Protocol, Bomgar, Citrix Online, Citrix Systems, Citrix WinFrame, Citrix XenApp, Crossloop, DameWare, Desktop sharing, Ericom Software, Fog Creek Copilot, FreeRDP, GO-Global, GoToMyPC, GoToMyPC Pro, Goverlan Remote Administration Suite, Goverlan Remote Control Software, I'm InTouch, Iland, Independent Computing Architecture, Jack PC, KRDC, Linux Terminal Server Project, List of Desktop Sharing Software, LogMeIn, Neatx, Netman, Netviewer, Network Level Authentication, Network Security Toolkit, NX technology, Openmeetings, Oracle VDI, PcAnywhere, Proxy Networks, Inc., PXES, Qumranet, QVD (software), Remote Administrator, Remote Desktop Protocol, Remote Desktop Services, RemoteFX, Screenconnect, SimpleHelp, SoftRay, SPICE (protocol), Synergy (software), Systancia, TCP Gender Changer, TeamViewer, Technical support, Teleskill, Thinstation, Timbuktu (software), Unyte, Virtual Desktop Extender, Windows Remote Assistance, Xpra, Yuuguu, Thin client, Blade PC, Blit (computer terminal), Chip PC, Dell FX100, DisplayLink, LISCON, MSN TV, NComputing, Ndiyo, Network Computing Devices, OpenThinClient, Rdesktop, Remote Graphics Software, Sun Ray, ThinCan, Thinvent, VirtualGL, Wyse, X terminal This book explains in-depth the real drivers and workings of Desktop Virtualization.
