Water Resources and Development Clive Agnew,Philip Woodhouse,2010-11-03 Since the start of the twenty-first century there has been an unprecedented focus upon water

as a key factor in the future of both society and environment. Water management lies at the heart of strategies of development as does the added the hazard of climate change. Water Resources and Development provides a stimulating interdisciplinary introduction to the role of water resources in shaping opportunities and constraints for development. The book begins by charting the evolution of approaches to water management. It identifies an emerging polarization in the late twentieth century between 'technical' and 'social' strategies. In the past decade these two axes of policy debate have been further intersected by discussion of the scale at which management decisions should be made: the relative effectiveness of 'global' and 'local' governance of water. A variety of case studies elaborate this analytical framework, exemplifying four key development challenges: economic growth, poverty reduction, competition and conflict over water, and adaptation to climate change. Current 'best practice' for water management is examined, addressing strategies of water supply augmentation, the ecological implications of intensified use, and strategies of demand management guided by economic or political principles. It is argued defining 'successful' water management and best practice requires first the establishment of development goals and the implicit trade-offs between water consumption and conservation. This engaging and insightful text offers a unique interdisciplinary analysis by integrating scientific, engineering, social and political perspectives. This is an essential text for courses on development studies, geography, earth sciences and the environment.

Internally Displaced People Janie Hampton,2014-10-14 The number of internally displaced people far outnumbers estimated refugees who have fled their countries. The

majority of displaced populations survive with very little security or legal protection. Responding to the needs of internally displaced people is one of the greatest humanitarian challenges of our time.;Revised and updated from the first edition, this volume includes information on internal displacement in 47 different countries across the globe - that is to say all countries experiencing conflict-induced displacement at the time of publication. There is discussion of the causes of displacement, patterns of flight, protection concerns and international response.

Buying into the Environment Christoph Erdmenger,2017-09-08 Green purchasing - or eco-procurement - by local and central governments has long been recommended in documents such as Agenda 21 to be a key - although sometimes supplemental-ingredient in the achievement of more environmentally responsible economies. Certainly, sustainable consumption cannot be considered a realistic goal without the full engagement of public authorities. Many initiatives have been undertaken in OECD countries, most successfully in Japan and Denmark where green public purchasing has been proven to be workable and highly effective, while, in other countries, city municipalities have successfully pioneered the development of sophisticated public environmental purchasing policies. However, for the vast majority of countries and their major cities, the potential for green public purchasing remains woefully untapped. A key question is what would be the environmental impact if the majority of cities in Europe replicated the success stories of those leading the way? Public procurement has, after all, been an important tool in achieving other public policy goals such as defence. Why should it not be used as a tool to defend the environment?

The RELIEF project, funded by the EU's City of Tomorrow and Cultural Heritage programme was established to answer exactly this question: to define the true potential of eco-procurement and to develop a strategy for change in Europe. Buying into the Environment is the result of the research segment of the project which has now been completed. A further stage-to design a Europe-wide action plan will follow in 2004. The book, organised under the auspices of the International Council on Local Environmental Initiatives (ICLEI) analyses national approaches already tested, and provides in-depth surveys on the pioneer cities such as Hamburg, Malmo and Zurich. Serious attention is given to city-specific hurdles which have been faced and overcome. The most relevant product groups for eco-procurement such as construction, transport, energy, information technology, furniture and food. are also analysed. Uniquely, the book also provides calculations on the environmental benefits potentially achievable through greener purchasing. Tools were developed and tested by the RELIEF researchers on the environmental assessment of products, public buying power and on evaluations of market conditions in order to provide scenarios for the application of green purchasing at a European level. The conclusions are that there is huge potential for both local and central governments to adapt their behaviour patterns and purchase in a more environmentally responsible way. For example, 18% of the EU's Kyoto Protocol commitment could be achieved if major cities in the European Union purchased green electricity. The results are complemented by new ideas on how best to foster innovation in public contractual arrangements-to encourage the development of products such as super-energy-efficient computers and fuel cells-and how the legal system may require adaptation and reform. The results presented in this book will provide an

indispensable resource for municipalities, governments, researchers and business practitioners looking for answers on how public procurement can have a fundamental and manifestly positive effect on the environment.

Sensor Technologies Michael J. McGrath,Cliodhna Ni Scanaill,Dawn Nafus,2014-01-23 Sensor Technologies: Healthcare, Wellness and Environmental Applications explores the key aspects of sensor technologies, covering wired, wireless, and discrete sensors for the specific application domains of healthcare, wellness and environmental sensing. It discusses the social, regulatory, and design considerations specific to these domains. The book provides an application-based approach using real-

world examples to illustrate the application of sensor technologies in a practical and experiential manner. The book guides the reader from the formulation of the research question, through the design and validation process, to the deployment and management phase of sensor applications. The processes and examples used in the book are primarily based on research carried out by Intel or joint academic research programs. "Sensor Technologies: Healthcare, Wellness and Environmental Applications provides an extensive overview of sensing technologies and their applications in healthcare, wellness, and environmental monitoring. From sensor hardware to system applications and case studies, this book gives readers an in-depth understanding of the technologies and how they can be applied. I would highly recommend it to students or researchers who are interested in wireless sensing technologies and the associated applications." Dr. Benny Lo Lecturer, The Hamlyn Centre, Imperial College of London "This timely addition to the literature on sensors covers the broad complexity of sensing, sensor types, and the vast range of existing and emerging applications in a very clearly written and accessible manner. It is particularly good at capturing the exciting possibilities that will occur as sensor networks merge with cloud-based 'big data' analytics to provide a host of new applications that will impact directly on the individual in ways we cannot fully predict at present. It really brings this home through the use of carefully chosen case studies that bring the overwhelming concept of 'big data' down to the personal level of individual life and health." Dermot Diamond Director, National Centre for Sensor Research, Principal Investigator, CLARITY Centre for Sensor Web Technologies, Dublin City University Sensor Technologies: Healthcare, Wellness and Environmental Applications takes the reader

on an end-to-end journey of sensor technologies, covering the fundamentals from an engineering perspective, introducing how the data gleaned can be both processed and visualized, in addition to offering exemplar case studies in a number of application domains. It is a must-read for those studying any undergraduate course that involves sensor technologies. It also provides a thorough foundation for those involved in the research and development of applied sensor systems. I highly recommend it to any engineer who wishes to broaden their knowledge in this area! Chris Nugent Professor of Biomedical Engineering, University of Ulster
