**Malware Forensics** Cameron H. Malin, Eoghan Casey, James M. Aquilina, 2008-08-08

**Malware Forensics: Investigating and Analyzing Malicious Code** covers the complete process of responding to a malicious code incident. Written by authors who have investigated and prosecuted federal malware cases, this book deals with the emerging and evolving field of live forensics, where investigators examine a computer system to collect and preserve critical live data that may be lost if the system is shut down. Unlike other forensic texts that discuss live forensics on a particular operating system, or in a generic context, this book emphasizes a live forensics and evidence collection methodology on both Windows and Linux operating systems in the context of identifying and capturing malicious code and evidence of its effect on the compromised system. It is the first book detailing how to perform live forensic techniques on malicious code. The book gives deep coverage on the tools and techniques of conducting runtime behavioral malware analysis (such as file, registry, network and port monitoring) and static code analysis (such as file identification and profiling, strings discovery, armoring/packing detection, disassembling, debugging), and more. It explores over 150 different

tools for malware incident response and analysis, including forensic tools for preserving and analyzing computer memory. Readers from all educational and technical backgrounds will benefit from the clear and concise explanations of the applicable legal case law and statutes covered in every chapter. In addition to the technical topics discussed, this book also offers critical legal considerations addressing the legal ramifications and requirements governing the subject matter. This book is intended for system administrators, information security professionals, network personnel, forensic examiners, attorneys, and law enforcement working with the inner-workings of computer memory and malicious code. \* Winner of Best Book Bejtlich read in 2008! \*

Navigating Intellectual Capital After the Financial Crisis Carol  
Yeh-Yun Lin,Leif Edvinsson,Jeffrey Chen,Tord Beding,2014-07-24  
In the first decade of the twenty-first century, the biggest event of  
worldwide proportion was the 2008 global financial crisis, which  
was caused primarily by ineffective governance, failed surveillance  
systems and implementation flaws. While fiscal and monetary  
policies succeeded in pulling many countries out of a financial  
freefall, most economies have performed beneath pre-recession  
levels as governments continued to struggle with their finances.  
Examining the financial crisis from the viewpoint of intangible  
assets provides a different perspective from traditional economic  
approaches. National Intellectual Capital (NIC), comprised mainly  
of human capital, market capital, process capital, renewal capital

and financial capital, is a valuable intangible asset and a key source of national competitive advantage in today's knowledge economy. The authors—pioneers in the field—present extensive data and a rigorous conceptual framework to analyze the connections between the global financial crisis and NIC development. Covering the period from 2005 to 2010 across 48 countries, the authors establish a positive correlation between NIC and GDP per capita and consider the impact of NIC investment for short-term recovery and long-term risk control and strategy formulation. This book summarizes and synthesizes the data presented in a series of eleven SpringerBriefs volumes on “National Intellectual Capital and the Financial Crisis,” concerning the co-developments between NIC and GDP growth and describes the internal and external factors that influenced the relative success or failure of national strategies in weathering the crisis. The authors go on to explore the impacts of various policy reforms, including stimulus packages and consolidations employed around the world, with particular respect to the factors enhancing or impeding short-term recovery versus long-term growth. Finally, they propose a new model of “sustainable national intellectual capital” and challenge readers to consider how to pass on a healthy globe and

harmonious society to the next generation.

Each volume in a series of SpringerBriefs on NIC and the financial crisis provides in-depth coverage of the impact of the crisis, the aftermath, future prospects, and policy implications for a regional cluster. This volume focuses on China, Hong Kong, Singapore, and Taiwan.

#### **Science-based Restoration Monitoring of Coastal Habitats:**

**Tools for monitoring coastal habitats** ,2003 This guidance manual ... provides technical assistance, outlines necessary steps, and provides useful tools for the development and implementation of sound scientific monitoring of coastal restoration efforts ... [and] offers a means to detect early warnings that the restoration is on track or not, to gauge how well a restoration site is functioning, to coordinate projects and efforts for consistent and successful restoration, and to evaluate the ecological health of specific coastal habitats both before and after project completion.

#### **Environmental Science and Technology** Frank R.

Spellman,Nancy E. Whiting,2006-06-02 Designed for both professional and student use, the new Second Edition includes recent improvements in the application of new technologies and

materials on the environment. It also places greater emphasis on the three environmental media of air, water, and soil and discusses how technology can be used to mitigate contamination of all three.

**New Visions of Nature** Martin A. M. Drenthen, F.W. Jozef Keulartz, James Proctor, 2009-07-23 *New Visions of Nature* focuses on the emergence of these new visions of complex nature in three domains. The first selection of essays reflects public visions of nature, that is, nature as it is experienced, encountered, and instrumentalized by diverse publics. The second selection zooms in on micro nature and explores the world of contemporary genomics. The final section returns to the macro world and discusses the ethics of place in present-day landscape philosophy and environmental ethics. The contributions to this volume explore perceptual and conceptual boundaries between the human and the natural, or between an 'out there' and 'in here.' They attempt to specify how nature has been publicly and genomically constructed, known and described through metaphors and re-envisioned in terms of landscape and place. By parsing out and rendering explicit these divergent views, the volume asks for a re-thinking of our relationship with nature.

*Transnational Corporations and Human Rights* Olivier De

Schutter,2006-09-11 This volume offers a systematic overview of the different tools through which the human rights accountability of transnational corporations may be improved. It first examines the responsibility of States in controlling transnational corporations, emphasizing both the limits imposed by the protection of the rights of investors under investment treaties and the potential of the US Alien Tort Claims Act and other similar extra-territorial legislations. It then turns to self-regulation by transnational corporations, through the use of codes of conduct or international framework agreements. It then discusses recent attempts at the global level to improve the human rights accountability of corporations by the direct imposition on corporations of obligations under international law. Finally, it considers the use of public procurement policies or of conditionalities in the lending policies of multilateral lending institutions in order to incentivize TNCs to behave ethically. Altogether, the book offers a rigorous legal analysis of these different developments and critically appraises their potential.

*Wetland Restoration, Flood Pulsing, and Disturbance*

*Dynamics* Beth Middleton, 1999-01-04 While it is generally accepted that flood pulsing and disturbance dynamics are critical to wetland viability, there is as yet no consensus among those responsible for wetland restoration about how best to plan for those phenomena or even whether it is really necessary to do so at all. In this groundbreaking book, Dr. Beth Middleton draws upon the latest research from around the world to build a strong case for making flood pulsing and disturbance dynamics integral to the wetland restoration planning process. While the initial chapters of the book are devoted to laying the conceptual foundations, most of the coverage is concerned with demonstrating the practical implications for wetland restoration and management of the latest ecological theory and research. It includes a fascinating case history section in which Dr. Middleton explores the restoration models used in five major North American, European, Australian, African, and Asian wetland projects, and analyzes their relative success from the perspective of flood pulsing and disturbance dynamics planning. *Wetland Restoration* also features a wealth of practical information useful to all those involved in wetland restoration and management,

including: A compendium of water level tolerances, seed germination, seedling recruitment, adult survival rates, and other key traits of wetland plant species A bibliography of 1,200 articles and monographs covering all aspects of wetland restoration A comprehensive directory of wetland restoration ftp sites worldwide An extensive glossary of essential terms Wetland Restoration, Flood Pulsing, and Disturbance Dynamics is a valuable working resource for wetland restoration consultants, employees of government agencies, and professional land managers, as well as ecologists, foresters, and geologists involved with wetland restoration and management. It is also an excellent text for advanced courses in wetland restoration.

*Public Sector Entrepreneurship* Link, Albert N.,2022-08-05 This timely book argues that the overcrowding of national parks in the United States represents a social problem in need of public sector action and a policy solution, as no systematic means to address this problem has been implemented either nationally or on a park-by-park basis.

**Restoring Your Eyesight** Doug Marsh, 2006-12-08 A holistic guide to improving one's vision both physically and spiritually • Explains how blurred vision is a reflection of other imbalances in the body, mind, and spirit • Offers natural methods for improvement of poor eyesight and stress-related difficulties, including dyslexia and ADHD • Combines the core values of the Bates method of natural vision improvement and Taoism  
Fewer than three percent of children in North America are born with visual defects, yet as they become adults nearly two thirds will become reliant on prescription lenses to see clearly. Virtually nonexistent in

pre-industrialized cultures, this epidemic of blurred vision can be traced to mental, physical, and spiritual imbalances in modern society. The traditional “quick fixes” of eyeglasses and contact lenses only serve to cover the true cause of blurred vision while increasing eye-strain, and often progressively worsen eyesight as the eyes become trained to work within the confines of the corrective lenses. The advent of refractive surgery carries even more serious risks. In *Restoring Your Eyesight*, Doug Marsh offers a natural alternative that shows readers how to improve their eyesight by taking conscious control of their vision health. He combines proven methods pioneered a century ago by eye doctor William Bates with the ancient Chinese wisdom of Taoism. Marsh describes how vision goes deeper than the eyes and optic nerves, extending well into the layers of the mind, emotions, and spirit. Eyesight difficulties are often connected to behavioral and stress-related syndromes, such as dyslexia, ADHD, stuttering, TMJ, and anxiety disorders. He draws upon the core values of the Bates method and Taoism--rhythm, softness, return, balance, and wholeness--to provide guidelines for a holistic healing of outer and inner vision.
