Seeds of Hope Jane Goodall,2014-04-01 From world-renowned scientist Jane Goodall, as seen in the new National Geographic documentary *Jane*, comes a fascinating examination of the critical role that trees and plants play in our world. From world-renowned scientist Jane Goodall, as seen in the new National Geographic documentary *Jane*, comes a fascinating examination of the critical role that trees and plants play in our world. *Seeds of Hope* takes us from Goodall's home in England to her home-away-from-home in Africa, deep inside the Gombe forest, where she and the chimpanzees are enchanted by the fig and plum trees they encounter. She introduces us to botanists around the world, as well as places where hope for plants can be found, such as The Millennium Seed Bank. She shows us the secret world of plants with all their mysteries and potential for healing our bodies as well as Planet Earth. Looking at the world as an adventurer, scientist, and devotee of sustainable foods and gardening--and setting forth simple goals we can all take to protect the plants around us--Goodall delivers an enlightening story of the wonders we can find in our own backyards.

SEED QUALITY ENHANCEMENT : PRINCIPLES AND PRACTICES Kalaivani, S.,Sasthri, G.,Selvakumari, A.,Srimathi, P.,Vanangamudi, K.,Vanangamudi, M.,2010-07-01 Seed is the source of future plants or foods, is the storage place of culture of history, is the first link in the food chain, is the ultimate symbol of food security. Seed is the source of life. Seeds are basic in crop production. No agricultural practice can improve a crop beyond the limits set by the seed. Quality seed is the key for successful agriculture, which demands each and every seed should be readily germinable and produce a vigorous seedling ensuring high yield. "Care with the seed and joy with the harvest" and "Good seed doesn't cost it always pays" are the popular adage which enlightens the importance of the quality seed. The farmers always very much interested in the best seed management practices which are safe, environmentally sound and scientifically proven technologies. Understandably, in view of the importance of quality seeds in Agriculture, both as a product and as a means of establishing a crop, most attention at all levels of investigation has been directed to crop seeds. Since seed is a biological entity, deterioration beyond harvest is inevitable. The consequences of low quality seeds are poor germination, low and delayed emergence and weak growth leading to poor field stand and ultimately reflecting on reduced yield. Low productivity could be attributed broadly to use of poor quality seeds. At present to overcome this, several seed enhancement techniques are available for quality upgradation. It has two goals; one is related to seed designing and other to seed functioning. The rationale for pre-sowing seed enhancement techniques is to mobilize the seeds own resources and to augment them with external resources to get maximum improvement in field stand establishment and yield. To achieve this, several physical, physiological and biochemical treatments are available at present to give value addition to seeds. Physiological seed treatments that improve seed performance are based primarily on seed hydration and dehydration. Among several non physiological seed treatments, coating or pelleting can also indirectly improve seed germination, stand establishment and crop productivity.

Enduring Seeds Gary Paul Nabhan,2016-10-01 As biological diversity continues to shrink at an alarming rate, the loss of plant species poses a threat seemingly less visible than the loss of animals but in many ways more critical. In this book, one of America's leading ethnobotanists warns about our loss of natural vegetation and plant diversity while providing insights into traditional Native agricultural practices in the Americas. Gary Paul Nabhan here reveals the rich diversity of plants found in tropical forests and their contribution to modern crops, then tells how this diversity is being lost to agriculture and lumbering. He then relates local parables of Native American agriculture--from wild rice in the Great Lakes region to wild gourds in Florida--that convey the urgency of this situation and demonstrate the need for saving the seeds of endangered plants. Nabhan stresses the need for maintaining a wide gene pool, not only for the survival of these species but also for the preservation of genetic strains that can help scientists breed more resilient varieties of other plants. *Enduring Seeds* is a book that no one concerned with our environment can afford to ignore. It clearly shows us that, as agribusiness increasingly limits the food on our table, a richer harvest can be had by preserving ancient ways. This edition features a new foreword by Miguel Altieri, one of today's leading spokesmen for sustainable agriculture and the preservation of indigenous farming methods.

The Prairie Gardener's Go-To Guide for Perennials Janet Melrose,Sheryl Normandeau,2023-04-05 The eighth book in the Guides for the Prairie Gardener series is all about those reliable, grounded plants you can count on: perennials. Perennials are those species whose stems and leaves die back to their crowns each fall, but whose roots remain alive throughout the non-growing months. They include showy flowers like peonies, poppies, lilies, clematis, and lupine, but also edibles like asparagus, fiddlehead ferns, sunchokes, and rhubarb. In this guide prairie gardening experts Janet Melrose and Sheryl Normandeau answer questions like What are the best perennials for building biodiversity in my garden? What’s the difference between species, variety, cultivar, and nativar? What kinds of perennials can I grow in containers? When and how do I divide plants once they’re well established? How do I keep enthusiastic re-seeders from taking over? Which of my perennial babies need to be brought inside for the winter? The pair dedicate a chapter to perennial vegetables and another to mitigating common pests and diseases. The final chapter is a perennial hall of fame, an extended list of recommended plantings for colour, native species, rock gardens, ground cover, fragrance, spring champions, and all-season displays. Janet and Sheryl give you the information you need to make your perennial garden as successful as you can while promoting biodiversity and creating a healthy habitat for pollinators and wildlife.
