Enterprising China Linda Yueh, 2011-07-07 China has undergone a remarkable transition over the past thirty years from a centrally-planned economy to a more market oriented one. The transformation of business in China has been correspondingly evident. This book gives an interdisciplinary analysis of the evolution of business development in China and the 'marketization' of industry during this period within a complex framework of legal, political, and economic reform aims. The book includes twelve original business case studies to provide industry-specific analysis of the overarching macroeconomic and legal developments. It examines both domestic enterprise reform in China and the evolving treatment of foreign firms in the context of both corporate laws and economic policies, and how business is likely to evolve as economic and legal reforms rapidly increase during the twenty-first century, notably with regard to China's increasing global integration.

Ecologies of the Moving Image Adrian J. Ivakhiv, 2013-10-07 This book presents an ecophilosophy of cinema: an account of the moving image in relation to the lived ecologies – material, social, and perceptual relations – within which movies are produced, consumed, and incorporated into cultural life. If cinema takes us on mental and emotional journeys, the author argues that those journeys that have reshaped our understanding of ourselves, life, and the Earth and universe. A range of styles are examined, from ethnographic and wildlife documentaries, westerns and road movies, sci-fi blockbusters and eco-disaster films to the experimental and art films of Tarkovsky, Herzog, Malick, and Brakhage, to YouTube's expanding audio-visual universe.

The Great Demographic Reversal Charles Goodhart, Manoj Pradhan, 2020-08-08 This original and panoramic book proposes that the underlying forces of demography and globalisation will shortly reverse three multi-decade global trends – it will raise inflation and interest rates, but lead to a pullback in inequality. “Whatever the future holds”, the authors argue, “it will be nothing like the past”. Deflationary headwinds over the last three decades have been primarily due to an enormous surge in the world’s available labour supply, owing to very favourable demographic trends and the entry of China and Eastern Europe into the world’s trading system. This book demonstrates how these demographic trends are on the point of reversing sharply, coinciding with a retreat from globalisation. The result? Ageing can be expected to raise inflation and interest rates, bringing a slew of problems for an over-indebted world economy, but is also anticipated to increase the share of labour, so that inequality falls. Covering many social and political factors, as well as those that are more purely macroeconomic, the authors address topics including ageing, dementia, inequality, populism, retirement and debt finance, among others. This book will be of interest and understandable to anyone with an interest on where the world’s economy may be going.

The Political Economy of China-Latin America Relations in the New Millennium Margaret Myers, Carol Wise, 2016-08-12 In this book, China-Latin America relations experts Margaret Myers and Carol Wise examine the political and economic forces that have underpinned Chinese engagement in the region, as well as the ways in which these forces have shaped economic sectors and policy-making in Latin America. The contributors begin with a review of developments in cross-Pacific statecraft, including the role of private, state-level, sub-national, and extra-regional actors that have

influenced China-Latin America engagement in recent years. Part two of the book examines the variety of Latin American development trajectories borne of China's growing global presence. Contributors analyse the effects of Chinese engagement on specific economic sectors, clusters (the LAC emerging economies), and sub-regions (Central America, the Southern Cone of South America, and the Andean region). Individual case studies draw out these themes. This volume is a welcome addition to the growing body of literature on China-Latin America relations. It illuminates the complex interplay between economics and politics that has characterized China's relations with the region as a second decade of enhanced economic engagement draws to a close. This volume is an indispensable read for students, scholars and policy makers wishing to gain new insights into the political economy of China-Latin America relations.

Molecular Devices for Solar Energy Conversion and Storage Haining Tian, Gerrit Boschloo, Anders Hagfeldt, 2017-09-14 This book shows the different molecular devices used for solar energy conversion and storage and the important characterization techniques for this kind of device. It has five chapters describing representative molecule-based solar cells, such as organic solar cells, dye-sensitized solar cells and hybrid solar cells (perovskite solar cell and quantum dots solar cells). It also includes two chapters demonstrating the use of molecular devices in the areas of solar fuel, water splitting and carbon dioxide reduction. There are further two chapters with interesting examples of solar energy storage related devices, like solar flow battery, solar capacitor and solar energy-thermal energy storage. Three chapters introduce important techniques used to characterize, investigate and evaluate the mechanism of molecular devices. The final chapter discusses the stability of perovskite solar cells. This book is relevant for a wide readership, and is particularly useful for students, researchers and industrial professionals who are working on molecular devices for solar energy

utilization.

Blindsight Peter Watts, 2006-10-03 Hugo and Shirley Jackson award-winning Peter Watts stands on the cutting edge of hard SF with his acclaimed novel, *Blindsight* Two months since the stars fell... Two months of silence, while a world held its breath. Now some half-derelict space probe, sparking fitfully past Neptune's orbit, hears a whisper from the edge of the solar system: a faint signal sweeping the cosmos like a lighthouse beam. Whatever's out there isn't talking to us. It's talking to some distant star, perhaps. Or perhaps to something closer, something en route. So who do you send to force introductions with unknown and unknowable alien intellect that doesn't wish to be met? You send a linguist with multiple personalities, her brain surgically partitioned into separate, sentient processing cores. You send a biologist so radically interfaced with machinery that he sees x-rays and tastes ultrasound. You send a pacifist warrior in the faint hope she won't be needed. You send a monster to command them all, an extinct hominid predator once called vampire, recalled from the grave with the voodoo of recombinant genetics and the blood of sociopaths. And you send a synthesist—an informational topologist with half his mind gone—as an interface between here and there. Pray they can be trusted with the fate of a world. They may be more alien than the thing they've been sent to find. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.
