Mobile Health Sasan Adibi, 2015-02-18 This book offers a comprehensive report on the technological aspects of Mobile Health (mHealth) and discusses the main challenges and future directions in the field. It is divided into eight parts: (1) preventive and curative medicine; (2) remote health monitoring; (3) interoperability; (4) framework, architecture, and software/hardware systems; (5) cloud applications; (6) radio technologies and applications; (7) communication networks and systems; and (8) security and privacy mechanisms. The first two parts cover sensor-based and bedside systems for remotely monitoring patients' health condition, which aim at preventing the development of health problems and managing the prognosis of acute and chronic diseases. The related chapters discuss how new sensing and wireless technologies can offer accurate and cost-effective means for monitoring and evaluating behavior of individuals with dementia and psychiatric disorders, such as wandering behavior and sleep impairments. The following two parts focus on architectures and higher level systems, and on the challenges associated with their interoperability and scalability, two important aspects that stand in the way of the widespread deployment of mHealth systems. The remaining parts focus on telecommunication support systems for mHealth, including radio technologies, communication and cloud networks, and secure health-related applications and systems. All in all, the book offers a snapshot of the state-of-art in mHealth systems, and addresses the needs of a multidisciplinary audience, including engineers, computer scientists, healthcare providers, and medical professionals, working in both academia and the industry, as well as stakeholders at government agencies and non-profit organizations.

The Fabric of Interface Stephen Monteiro, 2017-11-10 Tracing the genealogy of our physical interaction with mobile devices back to textile and needlecraft culture. For many of our interactions with digital media, we do not sit at a keyboard but hold a mobile device in our hands. We turn and tilt and stroke and tap, and through these physical interactions with an object we make things: images, links, sites, networks. In *The Fabric of Interface*, Stephen Monteiro argues that our everyday digital practice has taken on traits common to textile and needlecraft culture. Our smart phones and tablets use some of the same skills—manual dexterity, pattern making, and linking—required by the handloom, the needlepoint hoop, and the lap-sized quilting frame. Monteiro goes on to argue that the capacity of textile metaphors to describe computing (weaving code, threaded discussions, zipped files, software patches, switch fabrics) represents deeper connections between digital communication and what has been called “homecraft” or “women's work.” Connecting networked media to practices that seem alien to media technologies, Monteiro identifies handicraft and textile techniques in the production of software and hardware, and cites the punched cards that were read by a loom's rods as a primitive form of computer memory; examines textual and visual discourses that position the digital image as a malleable fabric across its production, access, and use; compares the digital labor of liking, linking, and tagging to such earlier forms of collective production as quilting bees and piecework; and describes how the convergence of intimacy and handiwork at the screen interface, combined with needlecraft aesthetics, genders networked culture and activities in unexpected ways.

From the author of Irreversible Damage, an investigation into a mental health industry that is harming, not healing, American children In virtually every way that can be measured, Gen Z's mental health is worse than that of previous generations. Youth suicide rates are climbing, antidepressant prescriptions for children are common, and the proliferation of mental health diagnoses has not helped the staggering number of kids who are lonely, lost, sad and fearful of growing up. What's gone wrong with America's youth? In Bad Therapy, bestselling investigative journalist Abigail Shrier argues that the problem isn't the kids—it's the mental health experts. She reveals that most of the therapeutic approaches have serious side effects and few proven benefits. Among her unsettling findings: Talk therapy can induce rumination, trapping children in cycles of anxiety and depression Social Emotional Learning handicaps our most vulnerable children, in both public schools and private "Gentle parenting" can encourage emotional turbulence – even violence – in children as they lash out, desperate for an adult in charge Mental health care can be lifesaving when properly applied to children with severe needs, but for the typical child, the cure can be worse than the disease.
