**New Perspectives on CALL for Second Language Classrooms** Sandra Fotos,Charles M. Browne,2013-06-17 This practical handbook is designed to help language teachers, teacher trainers, and students learn more about their options for using computer-assisted language learning (CALL) and develop an understanding of the theory and research supporting these options. The chapters in New Perspectives on CALL for Second Language Classrooms synthesize previous CALL theory and research and describe practical applications to both second and foreign language classrooms, including procedures for evaluating these applications. The implementation of CALL at the

institutional level is also addressed, with attention to designing multimedia language laboratories and creating collaborative CALL-based projects between educational institutions. Although many chapters locate their descriptions of CALL activities and projects within the ESL/EFL setting, the principles and activities described are equally useful for other language settings. The book does not require prior knowledge of CALL, computers, or software. To assist readers, a glossary of CALL terms and an appendix of CALL Web sites are provided. The book also has its own accompanying Web site (<http://www.erlbaum.com/callforL2classrooms>) presenting chapter abstracts, author contact information, and regularly updated links to pedagogical, research, and teacher development sites. By integrating theoretical issues, research findings, and practical guidelines on different aspects of CALL, this book offers teachers multiple levels of resources for their own professional development, for needs-based creation of specific CALL activities, for curriculum design, and for implementation of institutional and inter-institutional CALL projects.

**Protecting National Park Soundscapes** John A. Volpe National Transportation Systems Center, National Park Service, National Academy of Engineering, 2013-06-04 America's national parks provide a wealth of experiences to millions of people every year. What visitors see-landscapes, wildlife, cultural activities-often lingers in memory for life. And what they hear adds a dimension that sight alone cannot provide. Natural sounds can dramatically enhance visitors' experience of many aspects of park environments. In some settings, such as the expanses of Yellowstone National Park, they can even be the best way to enjoy wildlife, because animals can be heard at much greater distances than they can be seen. Sounds can also be a natural complement to natural scenes, whether the rush of water over a rocky streambed or a ranger's explanation of a park's history. In other settings, such as the New Orleans Jazz National Historical Park, sounds are the main reason for visiting a park. The acoustical

environment is also important to the well-being of the parks themselves. Many species of wildlife depend on their hearing to find prey or avoid predators. If they cannot hear, their survival is jeopardized-and the parks where they live may in turn lose part of their natural heritage. For all these reasons it is important to be aware of noise (defined as unwanted sound, and in this case usually generated by humans or machinery), which can degrade the acoustical environment, or soundscape, of parks. Just as smog smudges the visual horizon, noise obscures the listening horizon for both visitors and wildlife. This is especially true in places, such as remote wilderness areas, where extremely low sound levels are common. The National Park Service (NPS) has determined that park facilities, operations, and maintenance activities produce a substantial portion of noise in national parks and thus recognizes the need to provide park managers with guidance for protecting the natural soundscape from such noise. Therefore, the focus of the workshop was to define what park managers can do to control noise from facilities, operations, and maintenance, and not on issues such as the effects of noise on wildlife, noise metrics, and related topics. To aid in this effort, NPS joined with the National Academy of Engineering (NAE) and with the US Department of Transportation's John A. Volpe National Transportation Systems Center to hold a workshop to examine the challenges and opportunities facing the nation's array of parks. Entitled Protecting National Park Soundscapes: Best Available Technologies and Practices for Reducing Park- Generated Noise, the workshop took place October 3-4, 2012, at NPS's Natural Resource Program Center in Fort Collins, Colorado. Protecting National Park Soundscapes is a summary of the workshop.

Republic of Noise Diana Senechal,2011-11-17 In this book, Diana Senechal confronts a culture that has come to depend on instant updates and communication at the expense of solitude. Schools today emphasize rapid group work and fragmented activity, not the thoughtful study of complex subjects. The Internet offers contact with others throughout the day and night; we lose the ability to be apart, even in our minds. Yet solitude plays an essential role in literature, education, democracy, relationships, and matters of conscience. Throughout its analyses and argument, the book calls not for drastic changes but for a subtle shift: an attitude that honors solitude without descending into dogma.

**Developing More Curious Minds** John Barell,2003-02-15 After the September 11 attacks on the World Trade Center and Pentagon, many people questioned why no one had anticipated the terrorists' acts, even when events and intelligence seemed to point toward them. John Barell wonders if the attacks speak to a greater societal problem of complacency. He believes many students have become too passive in their learning, accepting information and facts as presented in textbooks, classes, and the media. Drawing on anecdotes from educators and his own life,

Barell describes practical strategies to spur students' ability and willingness to pose and answer their own questions. Antarctica expeditions, outer space discoveries, dinosaur fossils, literature, and more help define the importance of developing an inquisitive mind, using such practices as \* Maintaining journals on field trips, \* Using questioning frames and models when reading texts, \* Engaging in critical thinking and problem-based learning, and \* Integrating inquiry into curriculum development and the classroom culture. To become habits of mind, students' daily curiosities must be nurtured and supported. Barell draws a vivid map to guide readers to an intelligent revolution in which schools can become places where educators and students imagine and work together to become active citizens in their society.
