The Steam Engine Sara Louise Kras,2004 Discusses how the invention of the steam engine transformed society specifically and how it advanced technology in general.

99 Jumpstarts for Kids' Science Research Peggy Whitley,Susan Williams Goodwin,2005-12-30 This third entry in the Jumpstarts series focuses on Science topics for upper elementary and middle school students. Maintaining the 99 Jumpstarts format of the two previous books, 99 Jumpstarts for Kids Science Research is divided into ten broad topical sections. Each topic is arranged in alphabetical order under its section. Topics include Body Parts, Energy, Animals, Heavens, Weather, Matter, Medicine, Technology, Environment, and Geology. This pathfinder approach aides students in the research process, helping them define important terms, offer beginning questions to help narrow their topic, furnish source ideas and some fun activities to explore each topic. Grades 4-8.

The Steam Engine Deborah H. DeFord,2004-12-30 Traces the history of steam power from its lowly beginnings to its great influence on the Industrial Revolution and beyond. Includes timeline. 10+

Speculative Imperialisms Susana Loza,2017-12-27 Speculative Imperialisms: Monstrosity and Masquerade in Postracial Times explores the (settler) colonial ideologies underpinning the monstrous imaginings of contemporary popular culture in the Britain and the US. Through a close examination of District 9, Avatar, Doctor Who, Planet of the Apes, and steampunk culture, Susana Loza illuminates the durability of (settler) colonialism and how it operates through two linked yet distinct forms of racial mimicry: monsterization and minstrelsy. Speculative Imperialisms contemplates the fundamental, albeit changing, role that such racial simulations play in a putatively postracial and post-colonial era. It brings together the work on gender masquerade, racial minstrelsy, and postcolonial mimicry and puts it in dialogue with film, media, and cultural studies. This project draws upon the theoretical insights of Stuart Hall, Homi K. Bhabha, Edward Said, Philip Deloria, Michael Rogin, Eric Lott, Charles Mills, Falguni Sheth, Lorenzo Veracini, Adilifu Nama, Isiah Lavender III, Gwendolyn Foster, Marianna Torgovnick, Ann Laura Stoler, Anne McClintock, Eric Greene, Richard Dyer, and Ed Guerrero.

Creole City Nathalie Dessens,2015-02-03 In Creole City, Nathalie Dessens opens a window onto antebellum New Orleans during a time of rapid expansion and dizzying change. The story—rooted in the Sainte-Gême Family Papers harbored at The Historic New Orleans Collection—follows the twenty-year correspondence of Jean Boze to Henri de Ste-Gême, both refugees from Saint-Domingue. Exploring parts of the city's early nineteenth-century history that have previously been neglected, Dessens examines how New Orleans came to symbolize progress, adventure, and culture to so many. Through Boze's letters, readers witness the convergence of new Americans and old colonial populations that sparked transformations in the economic, social, and political structures, as well as the Creolization of the city. Additionally, the letters depict transatlantic experiences at a time when New Orleans was a key hub of the Atlantic trade and so very distinct from other nineteenth-century American metropolises, such as New York and Philadelphia. Dessens's portrayal of this seminal period is innovative and crucial to understanding of the city's rich record and its larger role in American history.

The Principles of Thermal Sciences and Their Application to Engineering John Clifford Jones,2000 Energy efficiency-a top priority across the range of engineering disciplines-requires a thorough understanding and careful application of thermophysical heat transfer. Although closely related, most texts tend to treat thermodynamics and heat transfer separately. The Principles of Thermal Science and Their Application to Engineering unifies the two topics in a unique approach that offers readers a strong, practical background in thermal science. The author covers virtually the entire field in a single, easy-to-read book. Beginning with classical thermodynamics, the chapters discuss the First, Second, and Third Laws of Thermodynamics, engine cycles, and other topics. The focus then shifts to heat transfer, with a thorough examination of conduction and convection and exploring various aspects radiation heat transfer. Finally, the text offers a clear, concise introduction to statistical thermodynamics. Numerous worked examples complement the text and offer readers a glimpse into problems often encountered in practice, in areas ranging from typical heat transfer problems to simulation of energy problems, and including questions related to combustion and the environment. Ideal for both self-study and coursework, The Principles of Thermal Science and Their Application to Engineering helps build the foundation needed by engineers in all disciplines, and will prove itself particularly valuable for chemical engineers, fuel technologists, and fire scientists.

The Oxford Encyclopedia of Economic History Joel Mokyr,2003-10-16 What were the economic roots of modern industrialism? Were labor unions ever effective in raising workers' living standards? Did high levels of taxation in the past normally lead to economic decline? These and similar questions profoundly inform a wide range of intertwined social issues whose complexity, scope, and depth become fully evident in the Encyclopedia. Due to the interdisciplinary nature of the field, the Encyclopedia is divided not only by chronological and geographic boundaries, but also by related subfields such as agricultural history, demographic history, business history, and the histories of technology, migration, and transportation. The articles, all written and signed by international contributors, include scholars from Europe, Latin America, Africa, and Asia. Covering economic history in all areas of the world and segments of economies from prehistoric times to the present, The Oxford Encyclopedia of Economic History is the ideal resource for students, economists, and general readers, offering a unique glimpse into this integral part of world history.

2002 Report of the Methyl Bromide Technical Options Committee United Nations Environment Programme. Methyl Bromide Technical Options Committee,2003 The Methyl Bromide Technical Options Committee (MBTOC) was established by parties to the Montreal Protocol on Substances that Deplete the Ozone Layer to identify existing and potential alternatives to methyl bromide (MB). This 2002 Assessment reports on MB usage, the quantities produced and consumed, and existing and potential alternate treatments for its use as a fumigant.

Joseph Kinney Maryellen McVickers,2014-10-01 As a young boy in the early 1800s, Joseph Kinney watched the riverboats carrying people and goods throughout the country and he dreamed of being a steamboat captain. When he grew up, Joseph bought a steamboat and became its captain, moving things up and down the river. Though Joseph had many jobs, he loved being a steamboat captain most of all. He began designing steamboats and had an idea for a design that made the boats even better. Steamboats built today still use Joseph Kinney's design.

Discourse and Disjuncture between the Arts and Higher Education Jessica Hoffmann Davis,2016-07-04 This accessible and compelling collection of faculty reflections examines the tensions between the arts and academics and offers interdisciplinary alternatives for higher education. With an eye to teacher training, these artist scholars share insights, models, and personal experience that will engage and inspire educators in a range of post-secondary settings. The authors represent a variety of art forms, perspectives, and purposes for arts inclusive learning ranging from studio work to classroom teaching to urban settings in which the subject is equity and social justice. From the struggles of an arts concentrator at an Ivy League college to the challenge of reconciling the dual identities as artists and arts educators, the issues at hand are candid and compelling. The examples of discourse ranging from the broad stage of arts advocacy to an individual course or program give testimony to the power and promise of the arts in higher education.

Railway Heritage and Tourism Michael V. Conlin,Geoffrey R. Bird,2014-05-08 This is the first book of its kind to examine railway heritage in the context of tourism in a comprehensive, internationally relevant manner. It explores the challenges faced by developers and operators of railway heritage destinations including financial, legal and managerial sustainability in the modern tourism industry. These themes are exemplified by a variety of case studies of railway heritage in tourism from regions around the world including North, Central and South America, the Caribbean, Europe, and

Australasia. The volume will be of particular interest to scholars of cultural tourism as well as researchers and practitioners of industrial heritage tourism, along with graduate and senior undergraduate students.

Advances in Concentrating Solar Thermal Research and Technology Manuel Blanco,Lourdes Ramirez Santigosa,2016-11-10 After decades of research and development, concentrating solar thermal (CST) power plants (also known as concentrating solar power (CSP) and as Solar Thermal Electricity or STE systems) are now starting to be widely commercialized. Indeed, the IEA predicts that by 2050, with sufficient support over ten percent of global electricity could be produced by concentrating solar thermal power plants. However, CSP plants are just but one of the many possible applications of CST systems. Advances in Concentrating Solar Thermal Research and Technology provides detailed information on the latest advances in CST systems research and technology. It promotes a deep understanding of the challenges the different CST technologies are confronted with, of the research that is taking place worldwide to address those challenges, and of the impact that the innovation that this research is fostering could have on the emergence of new CST components and concepts. It is anticipated that these developments will substantially increase the cost-competitiveness of commercial CST solutions and reshape the technological landscape of both CST technologies and the CST industry. After an introductory chapter, the next three parts of the book focus on key CST plant components, from mirrors and receivers to thermal storage. The final two parts of the book address operation and control and innovative CST system concepts. Contains authoritative reviews of CST research taking place around the world Discusses the impact this research is fostering on the emergence of new CST components and concepts that will substantially increase the cost-competitiveness of CST power Covers both major CST plant components and system-wide issues

Selden Allen McMeans, M.D. Jane McMeans,2019-12-31 The settling of the West is the stuff of American legend—pioneers and Gold Rush hopefuls, soldiers and farmers, villains and visionaries. Selden Allen McMeans was a real-life hero of the developing West, and this fascinating biography pays tribute to a man of impeccable ethics and exceptional talents. Born in 1806, McMeans trained with a local country doctor and gained enough expertise to qualify as an Army surgeon, the highest rank for physicians in the military. At the end of the Mexican war, he joined the boom in California and became one of the first two doctors to arrive in El Dorado County, the hub of the Gold Rush. He established a chapter of Aesculapius to identify qualified doctors so that the miners would receive competent care. In California, McMeans became active in politics and was elected to the State Legislature for 1852, and elected state treasurer in 1854. But despite McMeans’ best efforts, he became embroiled in a political and financial scandal. Become immersed in frontier life, learn the truth of “The Great Nevada Hoax,” and appreciate the life and work of a great doctor, politician, and philanthropist as this book takes you on a fantastic adventure.

Handbook on Material and Energy Balance Calculations in Material Processing, Includes CD-ROM Arthur E. Morris,H. Alan Fine,Gordon Harold Geiger,2011-09-06 This book approaches the subject of material and energy balances from two directions. First, it emphasizes the fundamental principles of the conservation of mass and energy, and the consequences of these two principles. Second it applies the techniques of computational chemistry to materials processing, and introduces new software developed by the author especially for material and heat balances. The third edition reflects the changes in the professional engineer's practice in the last 30 years, reflecting the dramatic shift away from metallurgical engineering and the extractive industry towards materials engineering. A large and growing number of recent graduates are employed in such fields as semiconductor processing, environmental engineering, and the production and processing of advanced and exotic materials for aerospace, electronic and structural applications. The advance in computing power and software for the desktop computer has significantly changed the way engineers make computations, and the biggest change comes from the computational approach used to solve problems. The spreadsheet program Excel is used extensively throughout the text as the main computational engine for solving material and energy balance equations, and for statistical analysis of data. The use of Excel and the introduction of the add-in programs enables the study of a range of variables on critical process parameters, and emphasis is placed on multi-device flowsheets with recycle, bypass, and purge streams whose material and heat balance equations were previously too complicated to solve by the normally-used hand calculator. The Excel-based program FlowBal helps the user set up material and heat balance equations for processes with multiple streams and units--
