*Engineering Effective Decision Support Technologies: New Models and Applications* Power, Daniel J.,2013-05-31 In modern, information-centric business environments, Decision Making Support Systems (DMSS) present a critical consideration for any organization serious about maintaining competitive advantage. Advances in information systems, knowledge management technologies, and other decision support systems necessitate a critical understanding of the latest trends and research.

*Engineering Effective Decision Support Technologies: New Models and Applications* presents a collection of the latest research in DMSS and applies those theoretical considerations to best practices in the field. This reference includes empirical case studies and an analysis of new models and perspectives in knowledge management, promoting discussion of DMSS strategies among managers, researchers, and students of information science.

**Periodical Acquisitions and the Internet** Nancy Slight-Gibney,2019-12-05 This book, first published in 1999, reveals emerging trends in selecting, acquiring, and accessing electronic journals. This book stresses the need for librarians to understand

copyright and contract laws, the complexity of the Internet business environment, and the need for constant training in order to take full advantage of electronic information. It offers proven methods, collection development procedures, and problem-solving techniques that keep up with the changes in collection librarianship and help librarians provide patrons with advanced and easy-to-use resources.

Using the Engineering Literature Bonnie A. Osif, 2006-08-23

The field of engineering is becoming increasingly interdisciplinary, and there is an ever-growing need for engineers to investigate engineering and scientific resources outside their own area of expertise. However, studies have shown that quality information-finding skills often tend to be lacking in the engineering profession.

#### Lexical Semantics for Terminology Marie-Claude

L'Homme, 2020-01-15 Lexical Semantics for Terminology: An introduction explores the interconnections between lexical semantics and terminology. More specifically, it shows how principles borrowed from lexico-semantic frameworks and methodologies derived from them can help understand terms and describe them in resources. It also explains how lexical analysis

complements perspectives primarily focused on knowledge. Topics such as term identification, meaning, polysemy, relations between terms, and equivalence are discussed thoroughly and illustrated with examples taken from various fields of knowledge. This book is an indispensable companion for those who are interested in words and work with specialized terms, e.g. terminologists, translators, lexicographers, corpus linguists. A background in terminology or lexical semantics is not required since all notions are defined and explained. This book complements other textbooks on terminology that do not focus on lexical semantics per se.

**Peers, Pirates, and Persuasion** John Logie, 2006-01-30 John Logie examines the rhetoric of the ongoing debate over peer-to-peer technologies, in particular Napster and its successors. The Grokster case, he contends, has already produced the chilling effects that will stifle the innovative spirit at the heart of the Internet and networked communities.

**Planning Support Systems Best Practice and New Methods**

Stan Geertman, John Stillwell, 2009-05-01 Planning Support Systems: Retrospect and Prospect It has been nearly twenty years since the term 'planning support systems' (PSS) first appeared in an article by Britton Harris (Harris 1989) and more than ten years since the concept was more broadly introduced in the academic literature (Harris and Batty 1993; Batty 1995; Klosterman 1997). As a result, the publication of a new book on PSS provides an excellent opportunity to assess past progress in the field and speculate on future developments. PSS have clearly become very popular in the academic world. This is the fourth edited book devoted to the topic following Brail and Klosterman (2001), Geertman and Stillwell (2003), and a third by Brail (2008). Papers devoted to PSS have been published in the leading planning journals and the topic has become a regular theme at academic conferences around the world; it has even spawned intellectual offspring such as spatial planning and decision support systems (SPDSS) and public participation planning support systems (PP-PSS). However, as Geertman and Stillwell point out in their introductory chapter, the experience with PSS in the world of professional practice has been disappointing. A substantial number of PSS have been developed but most of them are academic p-

totypes or 'one off' professional applications that have not been adopted elsewhere.

**Transportation Decision Making** Kumares C. Sinha, Samuel Labi, 2011-09-09 This pioneering text provides a holistic approach to decisionmaking in transportation project development and programming, which can help transportation professionals to optimize their investment choices. The authors present a proven set of methodologies for evaluating transportation projects that ensures that all costs and impacts are taken into consideration. The text's logical organization gets readers started with a solid foundation in basic principles and then progressively builds on that foundation. Topics covered include: Developing performance measures for evaluation, estimating travel demand, and costing transportation projects Performing an economic efficiency evaluation that accounts for such factors as travel time, safety, and vehicle operating costs Evaluating a project's impact on economic development and land use as well as its impact on society and culture Assessing a project's environmental impact, including air quality, noise, ecology, water resources, and aesthetics Evaluating alternative projects on the basis of multiple performance criteria Programming transportation investments so that resources

can be optimally allocated to meet facility-specific and system-wide goals. Each chapter begins with basic definitions and concepts followed by a methodology for impact assessment. Relevant legislation is discussed and available software for performing evaluations is presented. At the end of each chapter, readers are provided resources for detailed investigation of particular topics. These include Internet sites and publications of international and domestic agencies and research institutions. The authors also provide a companion Web site that offers updates, data for analysis, and case histories of project evaluation and decision making. Given that billions of dollars are spent each year on transportation systems in the United States alone, and that there is a need for thorough and rational evaluation and decision making for cost-effective system preservation and improvement, this text should be on the desks of all transportation planners, engineers, and educators. With exercises in every chapter, this text is an ideal coursebook for the subject of transportation systems analysis and evaluation.

**Human Subject Crash Testing** Lawrence S Nordhoff, Michael D Freeman, Gunter Siegmund, 2007-03-30 For more than 50 years,

crash studies involving human subjects have improved understanding of occupant and vehicle kinematics, helped explain injury mechanisms in lower speed collisions, and led to improved seat and vehicle design. Human Subject Crash Testing: Innovations and Advances includes 42 of the most important historical and current studies which used living human subjects in frontal, side, and rear-end impacts. Covering more than 50 years of research (from 1955 through 2006), the book includes numerous landmark SAE papers, as well as papers from other conference proceedings. Papers were chosen based on criteria that included quality and rigor of methods, uniqueness, number of subjects, and long-term reference value. This book also features a comprehensive bibliography, which contains brief summaries of other relevant human subject crash test studies that are not included in the book.

*Injury and Violence Prevention* Andrea Carlson Gielen, David A. Sleet, Ralph J. DiClemente, 2006-03-13 Every three minutes someone in the United States dies from an injury due to such causes as fires and burns, homicide and suicide, poisoning, drowning, falls, and motor vehicle crashes. Injuries are the leading cause of death for people ages 1 to 44 and the leading cause of

years of potential life lost before age 65. Injuries and violence are substantial problems not only in the U.S. but globally as well, and they exact a huge toll on the health of people throughout the world. Injury and Violence Prevention: Behavioral Science Theories, Methods, and Applications is a cutting-edge volume that provides a comprehensive understanding of injury and violence prevention. This detailed resource draws on the breadth and depth of many scientific disciplines and public health practice experiences. Written by internationally renowned experts in the field, Injury and Violence Prevention emphasizes the specific theories, methods, and applications that make behavioral science approaches relevant and central to reducing injury-related harm. The book covers a wide range of topics, including the most frequently used behavior change theories and models and shows how they have been—or could be—applied to injury problems, the most commonly used research methods for understanding and influencing behavior change, behavior change issues for specific injury topic areas, and a variety of cross-cutting issues important to the field. Injury and Violence Prevention suggests new lines of research and multidisciplinary collaborations that can serve as an inspiration to behavioral and social scientists, health psychologists, health

educators, injury prevention specialists, and others in public health who wish to explore more fully the exciting challenge of preventing injury and violence.
