Power System Restoration M. M. Adibi,2000-06-22 At a time when bulk power systems operate close to their design limits, the restructuring of the electric power industry has created vulnerability to potential blackouts. Prompt and effective power system restoration is essential for the minimization of downtime and costs to the utility and its customers, which mount rapidly after a system blackout. Power System Restoration meets the complex challenges that arise from the dynamic capabilities of new technology in areas such as large-scale system analysis, communication and control, data management, artificial intelligence, and allied disciplines. It provides an up-to-date description of the restoration methodologies and implementation strategies practiced internationally. The book opens with a general overview of the restoration process and then covers: *

- * Techniques used in restoration planning and training
- * Knowledge-based systems as operational aids in restoration
- * Issues associated with hydro and thermal power plants
- * High and extra-high voltage transmission systems
- * Restoration of distribution systems

Power System Restoration is essential reading for all power system planners and operating engineers in the power industry. It is also a valuable reference for researchers, practicing power engineers, and engineering students. Sponsored by: IEEE Power Engineering Society

A Guide for Desert and Dryland Restoration David A. Bainbridge,2012-09-26 Dryland degradation and desertification now affect almost a billion people around the world. Tragically, the biological resources and productivity of millions of acres of land are lost to desertification each year because people remain unaware of strategies and techniques that could improve yields, reduce risk, and begin healing the world's deserts. A Guide for Desert and Dryland Restoration is the first book to offer practical, field-tested solutions to this critical problem. Author David Bainbridge has spent more than 25 years actively involved in restoring lands across the American Southwest. A Guide for Desert and Dryland Restoration presents the results of his years of fieldwork, as well as research and experience from scientists and practitioners around the globe. The book discusses the ecology of desert plants, explores the causes of desertification and land abuse, and outlines the processes and procedures needed to evaluate, plan, implement, and monitor desert restoration projects. It sets forth economical and practical field-tested solutions for understanding site characteristics, selecting and growing plants, and ensuring that they survive with a minimal amount of water and care. Each chapter represents a guide to a critical topic for environmental restoration; extensive photographs, diagrams and drawings give detailed information for immediate application, and additional resources are included in appendixes. A Guide for Desert and Dryland Restoration is the first comprehensive book focused on restoring arid regions, and clearly demonstrates that arid lands can be successfully rehabilitated. In addition to restorationists, the book will be an invaluable resource for anyone working in arid lands, including farmers, ranchers, gardeners, landscapers, outdoor recreation professionals, and activists.

Effective Monitoring to Evaluate Ecological Restoration in the Gulf of Mexico National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Water Science and Technology Board,Ocean Studies Board,Committee on Effective Approaches for Monitoring and Assessing Gulf of Mexico Restoration Activities,2017-03-16 Gulf Coast communities and natural resources suffered extensive direct and indirect damage as a result of the largest accidental oil spill in US history, referred to as the Deepwater Horizon (DWH) oil spill. Notably, natural resources affected by this major spill include wetlands, coastal beaches and barrier islands, coastal and marine wildlife, seagrass beds, oyster reefs, commercial fisheries, deep benthos, and coral reefs, among other habitats and species. Losses include an estimated 20% reduction in commercial fishery landings across the Gulf of Mexico and damage to as much as 1,100 linear miles of coastal salt marsh wetlands. This historic spill is being followed by a restoration effort unparalleled in complexity and magnitude in U.S. history. Legal settlements in the wake of DWH led to the establishment of a set of programs tasked with administering and supporting DWH-related restoration in the Gulf of Mexico. In order to ensure that restoration goals are met and money is well spent, restoration monitoring and evaluation should be an integral part of those programs. However, evaluations of past restoration efforts have shown that monitoring is often inadequate or even absent. Effective Monitoring to Evaluate Ecological Restoration in the Gulf of Mexico identifies best practices for monitoring and evaluating restoration activities to improve the performance of restoration programs and increase the effectiveness and longevity of restoration projects. This report provides general guidance for restoration monitoring, assessment, and synthesis that can be applied to most ecological restoration supported by these major programs given their similarities in restoration goals. It also offers specific guidance for a subset of habitats and taxa to be restored in the Gulf including oyster reefs, tidal wetlands, and seagrass habitats, as well as a variety of birds, sea turtles, and marine mammals.

Pioneers of Ecological Restoration Franklin E. Court,2012-07-11 Internationally renowned for its pioneering role in the ecological restoration of tallgrass prairies, savannas, forests, and wetlands, the University of Wisconsin Arboretum contains the world's oldest and most diverse restored ecological communities. A site for land restoration research, public environmental education, and enjoyment by nature lovers, the arboretum remains a vibrant treasure in the heart of Madison's urban environment. *Pioneers of Ecological Restoration* chronicles the history of the arboretum and the people who created, shaped, and sustained it up to the present. Although the arboretum was established by the University of Wisconsin in 1932, author Franklin E. Court begins his history in 1910 with John Nolen, the famous landscape architect who was invited to create plans for the city of Madison, the university campus, and Wisconsin state parks. Drawing extensive details from archives and interviews, Court follows decades of collaborative work related to the arboretum's lands, including the early efforts of Madison philanthropists and businessmen

Michael Olbrich, Paul E. Stark, and Joseph W. "Bud" Jackson. With labor from the Civilian Conservation Corps during the 1930s Depression, University of Wisconsin scientists began establishing both a traditional horticultural collection of trees and plants and a completely new, visionary approach to recreate native ecosystems. Hundreds of dedicated scientists and staff have carried forward the arboretum's mission in the decades since, among them G. William Longenecker, Aldo Leopold, John T. Curtis, Rosemary Fleming, Virginia Kline, and William R. Jordan III. This archival record of the arboretum's history provides rare insights into how the mission of healing and restoring the land gradually shaped the arboretum's future and its global reputation; how philosophical conflicts, campus politics, changing priorities, and the encroaching city have affected the arboretum over the decades; and how early aspirations (some still unrealized) have continued to motivate the work of this extraordinary institution.

Crafting the Future of International Higher Education in Asia via Systems Change and Innovation Angela Yung Chi Hou, Joshua Smith, Ka Ho Mok, Chao-Yu Guo, 2023-05-29 The book discusses the most essential topics in understanding the development and changes of higher educational systems in Asia after the outbreak of the pandemic, and explores the transformative, international and innovative moves from an Asian perspective. The topics covered in the book are timely in that higher education in Asia was severely limited during the tumultuous time of the pandemic, including three themes- 1. How the pandemic drives system reform and quality management; 2. How can universities maintain transnational partnerships and attract global talent; 3. How would faculty members innovate teaching pedagogy and reassess student learning experiences. This timely and well-researched book provides valuable insights into the challenges and opportunities for national, regional, and international higher education created by the recent pandemic as well as technological and geopolitical changes. The lucid analysis of key issues and trends will be useful to academics, policymakers, and researchers within Asia and beyond. Professor Jane Knight, Ontario Institute for studies in Education, University of Toronto This book sets out important thinking for the post-pandemic era in Asian higher education. Based on valuable experience across a diverse region, this book highlights the opportunity to reimagine the future trajectory for higher education. As more of the Asia-Pacific moves toward mass and even universal systems of higher education, it exerts greater influence on higher education around the world. This book offers practical analysis that is culturally grounded in the rich civilizations of Asia about ubiquitous issues in higher education, including social equity, human agency, program quality, innovative pedagogy, academic governance, private sector initiative, knowledge building, and a new form of internationalization. It offers a sensible launchpad for a policy agenda. Professor Gerard Postiglione, Emeritus Professor, The University of Hong Kong

Instant Recovery with Write-Ahead Logging: Page Repair, System Restart, Media

Restore, and System Failover, Second Edition Goetz Graefe, Wey Guy, Caetano Sauer, 2016-04-29 Traditional theory and practice of write-ahead logging and of database recovery focus on three failure classes: transaction failures (typically due to deadlocks) resolved by transaction rollback; system failures (typically power or software faults) resolved by restart with log analysis, redo, and undo phases; and media failures (typically hardware faults) resolved by restore operations that combine multiple types of backups and log replay. The recent addition of single-page failures and single-page recovery has opened new opportunities far beyond the original aim of immediate, lossless repair of single-page wear-out in novel or traditional storage hardware. In the contexts of system and media failures, efficient single-page recovery enables on-demand incremental redo and undo as part of system restart or media restore operations. This can give the illusion of practically instantaneous restart and restore: instant restart permits processing new queries and updates seconds after system reboot and instant restore permits resuming queries and updates on empty replacement media as if those were already fully recovered. In the context of node and network failures, instant restart and instant restore combine to enable practically instant failover from a failing database node to one holding merely an out-of-date backup and a log archive, yet without loss of data, updates, or transactional integrity. In addition to these instant recovery techniques, the discussion introduces self-repairing indexes and much faster offline restore operations, which impose no slowdown in backup operations and hardly any slowdown in log archiving operations. The new restore techniques also render differential and incremental backups obsolete, complete backup commands on a database server practically instantly, and even permit taking full up-to-date backups without imposing any load on the database server. Compared to the first version of this book, this second edition adds sections on applications of single-page repair, instant restart, single-pass restore, and instant restore. Moreover, it adds sections on instant failover among nodes in a cluster, applications of instant failover, recovery for file systems and data files, and the performance of instant restart and instant restore.

Membranes for Industrial Wastewater Recovery and Re-use S. Judd, Bruce

Jefferson, 2003-04-25 There is increasing political and environmental pressure on industry to clean up the water which it uses in many processes, and to re-use this water where possible. This cleaning is done using specially-developed industrial membranes and this book covers the types and design of membranes, how they work and in which industries they are used. Special attention is paid to the textile, food/ beverage, pharmaceutical, oil and pulp and paper industries where such membranes are in regular use.

The Wolf at the Door Michael J. Graetz, Ian Shapiro, 2020 The acclaimed authors of *Death*

by a Thousand Cuts argue that Americans care less about inequality than about their own insecurity. Michael Graetz and Ian Shapiro propose realistic policies and strategies to make lives and communities more secure. This is an age of crisis. That much we can agree on. But a crisis of what? And how do we get out of it? Many on the right call for tax cuts and deregulation. Others on the left rage against the top 1 percent and demand wholesale

economic change. Voices on both sides line up against globalization: restrict trade to protect jobs. In *The Wolf at the Door*, two leading political analysts argue that these views are badly mistaken. Michael Graetz and Ian Shapiro focus on what really worries people: not what the rich are making but rather their own insecurity and that of people close to them. Americans are concerned about losing what they have, whether jobs, status, or safe communities. They fear the wolf at the door. The solution is not protectionism or class warfare but a return to the hard work of building coalitions around realistic goals and pursuing them doggedly through the political system. This, Graetz and Shapiro explain, is how earlier reformers achieved meaningful changes, from the abolition of the slave trade to civil rights legislation. The authors make substantial recommendations for increasing jobs, improving wages, protecting families suffering from unemployment, and providing better health insurance and child care, and they guide us through the strategies needed to enact change. These are achievable reforms that would make Americans more secure. *The Wolf at the Door* is one of those rare books that not only diagnose our problems but also show us how we can address them.
