Victorian Comedy and Laughter Louise Lee, 2020-08-06 This innovative collection of essays is the first to situate comedy and laughter as central rather than peripheral to nineteenth century life. *Victorian Comedy and Laughter: Conviviality, Jokes and Dissent* offers new readings of the works of Charles Dickens, Edward Lear, George Eliot, George Gissing, Barry Pain and Oscar Wilde, alongside discussions of much-loved Victorian comics like Little Tich, Jenny Hill, Bessie Bellwood and Thomas Lawrence. Tracing three consecutive and interlocking moods in the period, all of the contributors engage with the crucial critical question of how laughter and comedy shaped Victorian subjectivity and aesthetic form. Malcolm Andrews, Jonathan Buckmaster and Peter Swaab explore the dream of print culture togetherness that is conviviality, while Bob Nicholson, Louise Lee, Ann Featherstone, Louise Wingrove and Oliver Double discuss the rise-on-rise of the Victorian joke — both on the page and the stage — while Peter Jones, Jonathan Wild and Matthew Kaiser consider the impassioned debates concerning old and new forms of laughter that took place at the end of the century.

Healing with Art and Soul Kathy Luethje, 2008-12-18 This fascinating collection of essays contains a variety of perspectives about the use of expressive arts for facilitating physical and emotional healing. Each author within brings a fresh approach and unique experiences to their writing. Within these pages, you will find many ideas for the use of the arts and can learn how to engage the inner layers of the self that allow natural healing processes of the body and soul to flourish. When we fully engage an art modality, we find ourselves in a place in our consciousness that could be called 'healingspace,' where we feel ourselves whole and re-member ourselves as well. From psychic trauma to physical illness, dis-ease of many kinds may be addressed through the various techniques discussed here. The tools offered by some authors are population specific and age appropriate, while several authors have given us the philosophical underpinnings for it all. While the authors within represent the grassroots voices of this new and rapidly expanding field, several of them have developed their own methods for using the arts, and have thriving practices.

Our approach is wholistic. Music, visual arts, movement, dance, and poetry are discussed as separate modalities and in combination with one another in a process or flow. The reader will engage in our experiences with these modalities as they have been lived. The complementary CD that accompanies this book will allow the listener to have a full sound experience of toning. If a rationale is needed for establishing arts programs in medical centers or other health facilities, it can be found here. The book offers tools for self development and for group facilitation. Those wanting to expand their healing practice through the use of the arts will find the book to be a faithful guide. Anyone wishing for a fuller understanding of how the arts may work to facilitate healing will find much food for thought within these pages.

Feasibility of Shipping Golden Delicious Apples in Tray-Packed Boxes (Classic Reprint)

James Brian Fountain, 2018-05 Excerpt from Feasibility of Shipping Golden Delicious

Apples in Tray-Packed Boxes Five stripping containers were tested to compare the costs of using each and to find out how well they protected Golden Delicious apples from bruising. These five shipping containers were (1) cell-packs with corrugated partitions; (2) cell-packs with chipboard partitions; (3) tray-packs with deep-cup molded-pulpboard trays; (4) tray-packs with shallow-cup molded-polystyrene-foam trays; and (5) tray-packs with shallow-cup molded-pulpboard trays. Costs and charges for packing materials, direct labor for packing and handling, storage, and transport were higher for the cell-packs. These costs were per box for corrugated cell-packs, per box for chipboard cell-packs, per box for deep-cup molded-pulpboard tray-packs, per box for shallow-cup molded plastic tray-packs, and per box for the shallow-cup molded-pulpboard tray-packs. More of the apples were bruised in shallow-cup pulpboard tray-pack boxes - 27 percent - than in deep-cup pulpboard tray-pack boxes, shallow-cup plastic tray-pack boxes, corrugated cell-pack boxes, -and chipboard cell-pack boxes-48, 19, 19, and 22 percent, respectively. Handbook of Bioplastics and Biocomposites Engineering Applications Srikanth Pilla, 2011-07-20 This Handbook is the first to explore the extensive applications made with bioplastics & biocomposites for the packaging, automotive, biomedical, and construction industries. Bioplastics and biocomposites are becoming increasingly prominent because synthetic plastics and glass fiber composites are neither sustainable nor environmentally friendly. The Handbook of Bioplastics and Biocomposites Engineering Applications brings together scientists from academia and industry to report on current research and applications in the bioplastics and biocomposites arena. This new science is interdisciplinary and integrates pure and applied sciences such as chemistry, engineering and materials science. The Handbook focuses on five main categories of applications: Packaging; Civil Engineering; Biomedical; Automotive; General Engineering. The majority of the chapters review the properties, processing, characterization, synthesis and applications of the bio-based and biodegradable polymers and composites including: Polymers such as polylactic acid (PLA), polyhydroxybutyrate (PHB), guar gum based

plastics, cellulose polyesters, starch based bioplastics, vegetable oil derived bioplastics, biopolyethylene, chitosan, etc. Thermoplastic and thermosetting bioplastics and biocomposites with a focus on the automobile industry. The ways how to improve the properties of bioplastics, polymer blends, and biocomposites by combining them with both synthetic and natural fillers and reinforcements such as nanoclays, nanotubes (CNTs), and natural fibers (both wood and plant fibers). Studies that expand the boundaries of bioplastics that will allow for the new materials to be applied to most generic engineering applications. The Handbook will be of central interest to engineers, scientists and researchers who are working in the fields of bioplastics, biocomposites, biomaterials for biomedical engineering, biochemistry, and materials science. The book will also be of great importance to engineers in many industries including automotive, biomedical, construction, and food packaging.

Advances in Distillation Retrofit Nguyen Van Duc Long, Moonyong Lee, 2017-09-18
This book describes the current state of the art in the retrofit of existing distillation processes using advanced distillation techniques. Highlighting concept and practical application rather than theory, it emphasizes the use of advanced process integration and intensification techniques, such as multi-effect distillation, heat pump assisted distillation, thermally coupled distillation, dividing wall column, reactive distillation, and innovative hybrid systems. As a thermal separation method, distillation is one of the most important and widely used technologies in the chemical process industry. While it has many advantages, one major drawback is its large energy requirement, which can significantly influence overall plant profitability. The increasing cost of energy has forced industry to

reduce its energy requirement, but simultaneously there has been a need to increase capacity and output due to heightened demand. To accomplish this, the retrofit of distillation processes to increase efficiency and output has become a crucial issue. This book describes the use of advanced process integration and process intensification techniques to carry out effective distillation retrofit. Written by leading researchers in distillation process, process integration, process intensification, and process retrofit, the book presents a comprehensive review of contemporary advanced distillation techniques which can be employed in grass-root systems and retrofit. It is a valuable source of information for undergraduate and postgraduate students of chemical engineering, practicing process designers and chemical engineers.
