**Web Design for Libraries** Charles P. Rubenstein, 2014-08-28 Having a clear, attractive, and easy-to-navigate website that allows users to quickly find what they want is essential for any organization—including a library. This workbook makes website creation easy—no HTML required. This book teaches all of the essentials for designing and creating a simple, professional-looking website for any library. By using cut-and-paste templates from familiar software programs, readers can create complex websites in short order—without learning confusing HTML coding. Three final chapters cover using style sheets, address the potential benefits of HTML5, and overview content management system based websites. By using this guidebook as a reference, even those without previous knowledge about web design will possess enough basic information to create a great web page—and, with a little practice, prepare a full library website.

*Video Database Systems* Ahmed K. Elmagarmid,Haitao Jiang,Abdelsalam A. Helal,Anupam Joshi,Magdy Ahmed,2007-08-23 Great advances have been made in the database field. Relational and object- oriented databases, distributed and client/server databases, and large-scale data warehousing are among the more notable. However, none of these advances promises to have as great and direct an effect on the daily lives of ordinary citizens as video databases. Video databases will provide a quantum jump in our ability to deal with visual data, and in allowing people to access and manipulate visual information in ways hitherto thought impossible. Video Database Systems: Issues, Products and Applications gives practical information on academic research issues, commercial products that have already been developed, and the applications of the future driving this research and development. This book can also be considered a reference text for those entering the field of video or multimedia databases, as well as a reference for practitioners who want to identify the kinds of products needed in order to utilize video databases. Video Database Systems: Issues, Products and Applications covers concepts, products and applications. It is written at a level which is less detailed than that normally found in textbooks but more in-depth than that normally written in trade press or professional reference books. Thus, it seeks to serve both an academic and industrial audience by providing a single source of information about the research issues in the field, and the state-of-the-art of practice.

Cyber Worship in Multifaith Perspectives Mohamed Taher, 2006 Cyber Worship in Multifaith Perspectives, as is implied by its name, explores worship (i.e., Prayer, Praise, Scripture, Sacrament, Rituals, Confessions, Eucharist, Rites, Pilgrimages, Reflection, Contemplation, etc.) on the Internet. It is not an 'everything you need to know' guide about the subjects of faith and belief, religions-online, religions on the Net, or religions in cyberspace. Rather, it is a book about religious and spiritual experience under the rubric, cyber worship, which is the variety of ways religious devotion is performed and carried out on the Internet. The term 'Cyber Worship' is a catchall phrase, which includes variants such as online worship, virtual worship, electronic prayer, cyber puja, cyber synagogue, and so on. Dr. Mohamed Taher has thus assembled a quick reference for two groups: those communities that are involved in Cyber Worship and business Webs that collaborate in sustaining wired environments. As such, this book provides an interesting and current perspective on a practice that will continue to grow in the future.
