**The Novel *Das Boot*, Political Responsibility, and Germany's Nazi Past** Dean J. Guarnaschelli, 2021-09-23 This study investigates the relationship between Lothar-Günther Buchheim (1918-2007), his bestselling 1973 novel *Das Boot* (The Boat), and West Germany's Vergangenheitsbewältigung. As a war reporter during the Battle of the Atlantic, Buchheim benefitted from distinct privileges, yet he was never in a position of power. Almost thirty years later, Buchheim confronted the duality of his own past and railed against what he perceived to be a varnished public memory of the submarine campaign. Michael Rothberg's theory of the implicated beneficiary is used as a lens to view Buchheim and this duality. *Das Boot* has been retold by others worldwide because many people claim that the story bears an anti-war message. Wolfgang Petersen's critically acclaimed 1981 film and interpretations as a comedy sketch, a theatrical play, and a streamed television sequel have followed. This trajectory of Buchheim's personal memory reflects a process that practitioners of memory studies have described as transnational memory formation. Archival footage, interviews, and teaching materials reflect the relevance of *Das Boot* since its debut. Given the debates that surrounded Buchheim's endeavors, the question now raised is whether Germany's "mastering the past" serves as a model for other societies analyzing their own histories. Sitting at the intersection of History, Literature and Film Studies, this is an unprecedented case study depicting how the pre- and postwar times affected writers and others caught in the middle of the drama of the era.

Twilight War Mike Moore, 2015-09-21 Considering the historical background of space militarization and providing an overview of the United States' efforts to militarily dominate space since the dawn of the space age, this book argues that America must either ensure that space-related weapons are verifiably banned for all nations through an international treaty or definitively choose a policy of unilateral space dominance that may lead to an

arms race in space and possibly to another cold war. Through a careful discussion of the history of space programs, their impact on past policies and events, the tactical and strategic influence of space weapons on the engagement of war, and the potential pitfalls of a dominance strategy, this book concludes that unilateral military dominance of space by the United States would be a supreme mistake and that it would make Americans less secure.

**Operations Management** Chris Vidler, 2001 Part of a series which aims to reflect the changing face of the economic climate and business world. **Playing with the Past** Erik Champion, 2010-09-28 How can we increase awareness and understanding of other cultures using interactive digital visualizations of past civilizations? In order to answer the above question, this book first examines the needs and requirements of virtual travelers and virtual tourists. Is there a market for virtual travel? Erik Champion examines the overall success of current virtual environments, especially the phenomenon of computer gaming. Why are computer games and simulations so much more successful than other types of virtual environments? Arguments that virtual environments are impeded by technological constraints or by a paucity of evaluation studies can only be partially correct, for computer games and simulations are also virtual environments. Many of the underlying issues are caused by a lack of engagement with the philosophical underpinnings of culture, presence and inhabitation, and there are few exemplars that engage the public with history and heritage using interactive media in a meaningful and relevant manner. The intention of *Playing With the Past* is to help designers and critics understand the issues involved in creating virtual environments that promote and disseminate historical learning and cultural heritage through a close study of the interactive design principles at work behind both real and virtual places. Topics discussed include the design of virtual environments, and especially virtual heritage environments, virtual place-making, cultural presence, the pros and cons of game-style interaction, augmented reality projects, and appropriate evaluation methods. Virtual heritage environments discussed in the book include projects from Antarctica, Australia, Mexico, Malta, Egypt, Babylon, the Netherlands, Cambodia, and India.

**Blindsight** Peter Watts, 2006-10-03 Hugo and Shirley Jackson award-winning Peter Watts stands on the cutting edge of hard SF with his acclaimed novel, *Blindsight* Two months since the stars fell... Two months of silence, while a world held its breath. Now some half-derelict space probe, sparking fitfully past Neptune's orbit, hears a whisper from the edge of the solar system: a faint signal sweeping the cosmos like a lighthouse beam. Whatever's out there isn't talking to us. It's talking to some distant star, perhaps. Or perhaps to something closer, something en route. So who do you send to force introductions with unknown and unknowable alien intellect that doesn't wish to be met? You send a linguist with multiple personalities, her brain surgically partitioned into separate, sentient processing cores. You send a biologist so radically interfaced with machinery that he sees x-rays and tastes ultrasound. You send a pacifist warrior in the faint hope she won't be needed. You send a monster to command them all, an extinct hominid predator once called vampire, recalled from the grave with the voodoo of recombinant genetics and the blood of sociopaths. And you send a synthesist—an informational topologist with half his mind gone—as an interface between here and there. Pray they can be trusted with the fate of a world. They may be more alien than the thing they've been sent to find. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.
