Extreme Weather Events Marcia Amidon Lusted,2017-07-15 In the wake of every killer hurricane, devastating wild fire, severe drought, or once-in-a-century flooding event, it has become commonplace for scientists, politicians, and ordinary citizens to debate whether or not these severe weather events can be tied directly to climate change and global warming. The scientific consensus generally indicates that we are beginning to see upticks in extreme weather due to warming and the resulting shift in weather patterns. Certain politicians, business interests, and energy executives, however, forcefully reject such connections as unproven and speculative. Where does the truth lie? This anthology collects the strongest viewpoints from across the ideological spectrum and the globe and allows readers to evaluate the arguments and evidence for themselves before forming an educated opinion.

99 Jumpstarts for Kids' Science Research Peggy Whitley,Susan Williams Goodwin,2005-12-30 This third entry in the Jumpstarts series focuses on Science topics for upper elementary and middle school students. Maintaining the 99 Jumpstarts format of the two previous books, 99 Jumpstarts for Kids Science Research is divided into ten broad topical sections. Each topic is arranged in alphabetical order under its section. Topics include Body Parts, Energy, Animals, Heavens, Weather, Matter, Medicine, Technology, Environment, and Geology. This pathfinder approach aides students in the research process, helping them define important terms, offer beginning questions to help narrow their topic, furnish source ideas and some fun activities to explore each topic. Grades 4-8.

Weather Warfare Jerry E. Smith,2011-08-07 In April 1997, United States Secretary of Defense William Cohen declared that there are terrorists at work who “... are engaging even in an eco-type of terrorism whereby they can alter the climate, set off earthquakes, volcanoes remotely through the use of electromagnetic waves...” Weather modification in the form of cloud seeding to increase snow packs in the Sierras or suppress hail over Kansas is now an everyday affair. Hundreds of environmental and weather modifying technologies have been patented in the United States alone-and hundreds more are being developed in civilian, academic, military and quasi-military laboratories around the world at this moment! This book lays bare the grim facts of who is doing it and why. The earth and the sky have themselves been turned into weapons! Underground nuclear tests in Nevada have set off earthquakes. A Russian company has been offering to sell typhoons on demand since the 1990s. Scientists have been searching for ways to move hurricanes for over 50 years-the same timeframe that took us from the Wright Brothers to Neil Armstrong. In this book, Jerry E. Smith picks up where his 1998 book about the High-frequency Active Auroral Research Program (HAARP) left off. He reports on recent developments at HAARP, including its possible connection to the crash of the Space Shuttle Columbia and what role, if any, it played in certain “natural” disasters, like Hurricane Katrina. Tackling the chemtrail controversy, Smith examines claims that particles called aerosols are being deliberately injected into the atmosphere. Edward Teller, father of the hydrogen bomb, proposed putting up a “sun screen” of aerosols to save the earth from global warming-is someone actually doing it? Numerous ongoing military programs do inject aerosols at high altitude for communications and surveillance operations. Could these include mind control or population control applications? Smith puts these technologies into context by examining the geopolitical conflicts that are driving their development from Globalization to the rise of Neo-Con Neo-Fascism.

Where the Weather Meets the Road National Research Council,Transportation Research Board,Division on Earth and Life Studies,Board on Atmospheric Sciences and Climate,Committee on Weather Research for Surface Transportation: The Roadway Environment,2004-05-01 Weather has broad and significant effects on the roadway environment. Snow, rain, fog, ice, freezing rain, and other weather conditions can impair the ability of drivers to operate their vehicles safely, significantly reduce roadway capacity, and dramatically increase travel times. Multiple roadway activities, from roadway maintenance and construction to shipping, transit, and police operations, are directly affected by inclement weather. Some road weather information is available to users currently, however a disconnect remains between current research and operations, and additional research could yield important safety and economic improvements for roadway users. Meteorology, roadway technology, and vehicle systems have evolved to the point where users could be provided with better road weather information through modern information technologies. The combination of these technologies has the potential to significantly increase the efficiency of roadway operations, road capacity, and road safety. Where the Weather Meets the Road provides a roadmap for moving these concepts to reality.

And Now-- the Weather Keith C. Heidorn,2005 And Now . . . the Weather Sundogs, haloes, dust devils, snow pillars, blizzards, clippers, snowflakes, crepuscular rays, thunderstorms, lightning, rainbows, moonbows, and more With Keith C. Heidorn, The Weather Doctor, who is known to Internet weather enthusiasts around the globe. Severe weather is dramatic, but rarely experienced. Heidorn focuses instead on the hows, whens, wheres, whys, and specially the joys of daily weather - the phenomena that shape our lives, yet never make it into history books. Always keep those weather eyes up So says weather aficionado Keith C. Heidorn whose inveterate curiosity and far-reaching scientific knowledge of meteorology form the foundation for the fascinating explanations of everyday weather phenomena that fill the pages of And Now. . . the Weather. After a lifetime of watching weather systems unfold, Heidorn observes the weather in relation to the sun, the driving force behind all weather conditions. Thus, in And Now. . . the Weather, he uses seasonal cycles as a framework, starting with the winter solstice and moving through the calendar year, recording weather facts and events under the month in which they most frequently occur. To help us train our weather senses so that we become more aware of the conditions surrounding us, Heidorn covers weather topics that are familiar in an informative and entertaining style. It is his hope that we will pause to enjoy, understand, and even anticipate the beauty of weather. A helpful collection of diagrams, maps, and black-and-white photographs illustrate Heidorn's weather scenarios, showing us exactly what to look for when we keep our weather eyes up.

Wonders of the Air Tamra Andrews,2004-11-30 This second book in a four-book series exploring the elements, Wonders of Nature: Natural Phenomena in Science and Myth, looks at the wonder of air from both a scientific and mythical perspective. Intended for teachers and librarians to use with students in intermediate and middle school grades, the book looks at natural phenomena that occurs in the air around us—such as rainbows, snow, tornadoes, lightning, and thunder—through ancient myth, and details the explanations of modern-day science. With this interdisciplinary approach, students will be encouraged to appreciate the magic in both myth and science, and to understand the commonality of human experience with nature over time. Each book contains eight myths, each from a different culture, and accompanying scientific explanation to use with students. Included are bibliographies; recommended Web sites; ideas for field trips, student projects, discussion, and activities; and illustrations and diagrams that will enhance student interest. Grades 4-8.

Reality Check Donald R. Prothero,2013-08-01 A thought-provoking look at science denialism “for popular science readers who want better to be able to explain and defend science and scientific methods to others” (Library Journal). The battles over evolution, climate change, childhood vaccinations, and the causes of AIDS, alternative medicine, oil shortages, population growth, and the place of science in our country—all are reaching a fevered pitch. Many people and institutions have exerted enormous efforts to misrepresent or flatly deny demonstrable scientific reality to protect their nonscientific ideology, their power, or their bottom line. To shed light on this darkness, Donald R. Prothero explains the scientific process and why society has come to rely on science not only to provide a better life but also to reach verifiable truths no other method can obtain. He describes how major scientific ideas that are accepted by the entire scientific community (evolution, anthropogenic global warming, vaccination, the HIV cause of AIDS, and others) have been attacked with totally unscientific arguments and methods. Prothero argues that science deniers pose a serious threat to society, as their attempts to subvert the truth have resulted in widespread scientific ignorance, increased risk of global catastrophes, and deaths due to the spread of diseases that could have been prevented. “Prothero’s treatise will give the science-minded something to cheer about, a brief summary of the real data that supports so many critical aspects of modern life.” —Publishers Weekly

Durham Weather and Climate since 1841 Stephen Burt,Tim Burt,2022-05-12 The British have always been obsessed by the weather. Astronomers at Durham Observatory began weather observations in 1841; weather records continue unbroken to this day, one of the longest continuous series of single-site weather records in Europe. Durham Weather and Climate since 1841 represents the first full publication of this newly digitised record of English weather, which will be of lasting appeal to interested readers and climate researchers alike. The book celebrates 180 years of weather in north-east England by describing how the records were (and are) made and the people who made them, examines monthly and seasonal weather patterns and extremes across two centuries, and considers long-term climate change. Local documentary sources and contemporary photographs bring the statistics to life, from the great flood of 1771 and skating on the frozen River Wear in February 1895 right up to Durham's hottest-ever day in July 2019 and its wettest winter in 2021. Extensive links are provided to full daily weather records back to 1843. This volume is a sister publication to Oxford Weather and Climate since 1767 by the same authors, published by Oxford University Press in 2019.

Investing in the Era of Climate Change Bruce Usher,2022-09-28 A climate catastrophe can be avoided, but only with a rapid and sustained investment in companies and projects that reduce greenhouse gas emissions. To the surprise of many, this has already begun. Investors are abandoning fossil-fuel companies and other polluting industries and financing businesses offering climate solutions. Rising risks, evolving social norms, government policies, and technological innovation are all accelerating this movement of capital. Bruce Usher offers an indispensable guide to the risks and opportunities for investors as the world faces climate change. He explores the role that investment plays in reducing emissions to net zero by 2050, detailing how to finance the winners and avoid the losers in a transforming global economy. Usher argues that careful examination of climate solutions will offer investors a new and necessary lens on the future for their own financial benefit and for the greater good. Companies that reduce greenhouse gas emissions will create great wealth, and, more importantly, they will provide a lifeline for humanity. Grounded in academic and industry research, Usher’s insights bring clarity to a complex and controversial topic while illuminating the people behind the numbers. This book sets out a practical and actionable plan for investors that will alter the course of climate change.
