CLOUD AND INTERNET SECURITY Binh Nguyen, A while back I wrote two documents called 'Building a Cloud Service' and the 'Convergence Report'. They basically documented my past experiences and detailed some of the issues that a cloud company may face as it is being built and run. Based on what had transpired since, a lot of the concepts mentioned in that particular document are becoming widely adopted and/or are trending towards them. This is a continuation of that particular document and will attempt to analyse the issues that are faced as we move towards the cloud especially with regards to security. Once again, we will use past experience, research, as well as current events trends in order to write this particular report. Personal experience indicates that keeping track of everything and updating large scale documents is difficult and depending on the system you use extremely cumbersome. The other thing readers have to realise is that a lot of the time even if the writer wants to write the most detailed book ever written it's quite simply not possible. Several of my past works (something such as this particular document takes a few weeks to a few months to write depending on how much spare time I have) were written in my spare time and between work

and getting an education. If I had done a more complete job they would have taken years to write and by the time I had completed the work updates in the outer world would have meant that the work would have meant that at least some of the content would have been out of date. Dare I say it, by the time that I have completed this report itself some of the content may have come to fruition as was the case with many of the technologies with the other documents? I very much see this document as a starting point rather than a complete reference for those who are interested in technology security. Note that the information contained in this document is not considered to be correct nor the only way in which to do things. It's a mere guide to how the way things are and how we can improve on them. Like my previous work, it should be considered a work in progress. Also, note that this document has gone through many revisions and drafts may have gone out over time. As such, there will be concepts that may have been picked up and adopted by some organisations while others may have simply broken cover while this document was being drafted and sent out for comment. It also has a more strategic/business slant when compared to the original document which was more technically orientated. No illicit activity (as far as I know and have researched) was conducted during the formulation of this particular document. All information was obtained only from publicly available resources and any information or concepts that are likely to be troubling has been redacted. Any relevant vulnerabilities or flaws that were found were reported to the

relevant entities in question (months have passed). Feedback/credit on any ideas that are subsequently put into action based on the content of this document would be appreciated. Any feedback on the content of this document is welcome. Every attempt has been made to ensure that the instructions and information herein are accurate and reliable. Please send corrections, comments, suggestions and questions to the author. All trademarks and copyrights are the property of their owners, unless otherwise indicated. Use of a term in this document should not be regarded as affecting the validity of any trademark or service mark. The author would appreciate and consider it courteous if notification of any and all modifications, translations, and printed versions are sent to him. Please note that this is an organic document that will change as we learn more about this new computing paradigm. The latest copy of this document can be found either on the author's website, blog, and/or http://www.tldp.org/

  Embodied Minds--technical Environments Thomas Hoff,Cato Alexander Bjørkli,2008 The deep integration of technology into our modern society forces us to rethink the relationship humans have to their surroundings. The rise of complex socio-technical systems denotes how humans and technology have entered a symbiotic relationship where the coordinated and fluent interaction between the two is a crucial condition for modern societies to function. The disharmony in the relationship between humans and technology has immediate and serious consequences. Accidents and failed operations in transport, incomprehensible user interfaces, and failure to learn from experience are all examples from everyday life, suggesting that the understanding of human-technology relationships is not sufficient. This book investigates how humans relate to technology in our modern society, and how the basic assumption of human thought and behavior guide human efforts to improve and control technology. The fact is that the skilled use of

technology in expert systems and everyday life challenges the traditional conception of humans and technology as two separate elements in the analysis of work. The book shows how this dualism is evident and problematic in a wide range of areas, such as investigation of human error in accidents, case studies of innovative interface solutions, simulator training strategies, analysis of work practices in complex systems, and traffic safety research. Embodied Minds - Technical Environments supplements the ongoing effort to understand how technology can be integrated with more confidence in modern society.

Social and Economic Effects of Community Wireless Networks and Infrastructures Abdelaal, Abdelnasser,2013-02-28 It is surprising to think that in today␣s rapidly evolving world of technology, over half of the globe still does not have access to high speed internet. Creating community wireless networks has in the past been a way to provide remote communities with internet and network access. Social and Economic Effects of Community Wireless Networks and Infrastructures highlights the successes of community wireless networks but also boldly addresses the potential risk factors and broader socioeconomic concerns. This publication␣s exploration of previous successes and failures, various designs, and potential challenges with CWNs makes it a valuable resource for researchers, practitioners, vendors, and activists.

The NexStar User's Guide II Michael Swanson,2017-10-31 Michael Swanson's online discussions with literally thousands of NexStar owners made it clear that there was a desperate need for a book such as this — one that provides a complete, detailed guide to buying, using and maintaining NexStar telescopes. Although this book is highly comprehensive, it is suitable for beginners — there is a chapter on Astronomy Basics — and experts alike. Celestron's

NexStar telescopes were introduced in 1999, beginning with their first computer controlled go to model, a 5-inch. More models appeared in quick succession, and Celestron's new range made it one of the two dominant manufacturers of affordable go to telescopes.
