Designing Ubiquitous Information Environments: Socio-Technical Issues and Challenges Carsten Sørensen,Youngjin Yoo,Kalle Lyytinen,Janice I. DeGross,2006-01-17 This book records one of the continuous attempts of the IFIP Working Group 8. 2, studying the interaction of information systems and the organization, to explore and understand the shifting boundaries and dependencies between organizational activities and their computer support. The book marks the result of the IFIP WG 8. 2 conference on Designing Ubiquitous Information Environments: Socio-Technical Issues and Challenges. Since its inception in the late 1970s, IFIP WG 8. 2 has sought to understand how computer-based information systems interact and must be designed as an integrated part of the organizational design. At that time, information systems handled repetitive and remote back-office functions and the main concern was work task design for repetitive input tasks and the potential impact of improved information support on organizational decision-making

and structure. The focus of the information system design shifted in the 1980s when computers became part of the furniture and moved into the office. Reflecting this significant change, IFIP WG 8. 2 in 1989 organized a conference dedicated to the design and impact of desktop technology in order to examine how organizational processes and the locus of action changed when the computer was moved into the office. Sixteen years later, we are experiencing another significant change. Computers are now becoming part of our body and sensory system and will move out of the traditional office locations and into the wilderness. Again, IFIP WG 8.

The Legal Regulation of Cyber Attacks Ioannis Iglezakis,2020-03-19 This updated edition of a well-known comprehensive analysis of the criminalization of cyberattacks adds important new guidance to the legal framework on cybercrime, reflecting new legislation, technological developments, and the changing nature of cybercrime itself. The focus is not only on criminal law aspects but also on issues of data protection, jurisdiction, electronic evidence, enforcement, and

digital forensics. It provides a thorough analysis of the legal regulation of attacks against information systems in the European, international, and comparative law contexts. Among the new and continuing aspects of cybersecurity covered are the following: the conflict of cybercrime investigation and prosecution with fundamental rights to privacy and freedom of expression; the 2016 Directive on security of network and information systems (NIS Directive); the General Data Protection Regulation (GDPR); the role of national computer security incident response teams (CSIRTs); the European Union (EU) response to new technologies involving payment instruments, including virtual currencies and digital wallets; the EU Commission's legislative proposals to enhance cross-border gathering of electronic evidence; internet service providers' role in fighting cybercrime; measures combatting identity theft, spyware, and malware; states and legal persons as perpetrators of cybercrime; and the security and data breach notification as a compliance and transparency tool. Technical definitions, case laws, and analysis of both substantive law and procedural law contribute to a comprehensive understanding of cybercrime regulation and its current evolution in practice. Addressing a topic of growing importance in unprecedented detail, this new edition of a much-relied-upon resource will be welcomed by professionals and authorities dealing with cybercrime, including lawyers, judges, academics, security professionals, information technology experts, and law enforcement agencies.

Telecommunications Research Trends Hans F. Ulrich,Ernst P. Lehrmann,2008 Telecommunication is the transmission of signals over a distance for the purpose of communication. In modern times, this process typically involves the sending of electromagnetic waves by electronic transmitters, but in earlier times telecommunication may have involved the use of smoke signals, drums or semaphore or heliograph. Today, telecommunication is widespread and devices that assist the process, such as the television, radio and telephone, are common in many parts of the world. There are also many networks that connect these devices, including computer networks, public telephone networks, radio networks and television networks. Computer communication across the Internet is one of many examples of telecommunication. This book presents the latest research from around the world.

The NexStar User's Guide II Michael Swanson,2017-10-31 Michael Swanson's online discussions with literally thousands of NexStar owners made it clear that there was a desperate need for a book such as this – one that provides a complete, detailed guide to buying, using and maintaining NexStar telescopes. Although this book is highly comprehensive, it is suitable for beginners – there is a chapter on Astronomy Basics – and experts alike. Celestron's NexStar telescopes were introduced in 1999, beginning with their first computer controlled go to model, a 5-inch. More models appeared in quick succession, and Celestron's new range made it one of the two dominant manufacturers of affordable go to telescopes.

Revolutionary Wealth Alvin Toffler,Heidi Toffler,2006-04-25 Starting with the publication of their seminal bestseller, Future Shock, Alvin and Heidi Toffler have given millions of readers new

ways to think about personal life in today's high-speed world with its constantly changing, seemingly random impacts on our businesses, governments, families and daily lives. Now, writing with the same rare grasp and clarity that made their earlier books classics, the Tofflers turn their attention to the revolution in wealth now sweeping the planet. And once again, they provide a penetrating, coherent way to make sense of the seemingly senseless.Revolutionary Wealth is about how tomorrow's wealth will be created, and who will get it and how. But twenty-first-century wealth, according to the Tofflers, is not just about money, and cannot be understood in terms of industrial-age economics. Thus they write here about everything from education and child rearing to Hollywood and China, from everyday truth and misconceptions to what they call our "third job"—the unnoticed work we do without pay for some of the biggest corporations in our country. They show the hidden connections between extreme sports, chocolate chip cookies, Linux software and the "surplus complexity" in our lives as society wobbles back and forth between depressing decadence and a hopeful post-decadence. In their earlier work, the Tofflers coined the word "prosumer" for people who consume what they themselves produce. In Revolutionary Wealth they expand the concept to reveal how many of our activities—whether parenting or volunteering, blogging, painting our house, improving our diet, organizing a neighborhood council or even "mashing" music—pump "free lunch" from the "hidden" non-money economy into the money economy that economists track. Prosuming, they forecast, is about to explode and compel radical changes in the way we measure, make and manipulate wealth. Blazing with fresh ideas, Revolutionary Wealth provides readers with powerful new tools for thinking about—and preparing for—their future.

The Secret Reasons Why Teachers Are Not Using Web 2.0 Tools and What School Librarians Can Do about It Peggy Milam Creighton Ph.D.,2012-04-13 School librarians need a simple action plan for overcoming the barriers to adopting School Library 2.0. This book provides one, and describes how fully integrating technology would dramatically benefit 21st-century schools. Web 2.0 and its associated tools have the power to substantially increase student achievement. This book has two straightforward primary purposes: to detail the research-based reasons classroom teachers fail to incorporate Web 2.0 tools into their instruction and collaboration with other educators; and to provide actionable strategies to rectify these omissions. The Secret Reasons Why Teachers Are Not Using Web 2.0 Tools and What School Librarians Can Do about It provides authoritative definitions of Web 2.0, explains the types of Web 2.0 tools suited for use in educational settings, examines the research-based reasons they are underutilized, and offers strategies for school librarians to model

the use of technology-enabled tools—and for teaching others to do so. This book will benefit anyone wishing to effect a positive social change in improving student achievement: practicing K–12 librarians and educators, K–12 school and district administrators, and researchers in the field of K–12 education.

Informed Publics, Media and International Law Daniel Joyce,2020-11-26 This book considers the significance of informed publics from the perspective of international law. It does so by analysing international media law frameworks and the 'mediatization' of international law in institutional settings. This approach exposes the complexity of the interrelationship between international law and the media, but also points to the dangers involved in international law's associated and increasing reliance upon the mediated techniques of communicative capitalism – such as publicity – premised upon an informed international public whose existence many now question. The book explores the ways in which traditional regulatory and analytical categories are increasingly challenged - revealed as inadequate or bypassed - but also assesses their resilience and future utility in light of significant technological change and concerns about fake news, the rise of big data and algorithmic accountability. Furthermore, it contends that analysing the imbrication of media and international law in the current digital transition is necessary to understand the nature of the problems a system such as international law faces without sufficiently informed publics. The book argues that international law depends on informed global publics to function and to address the complex global problems which we face. This draws into view the role media plays in relation to international law, but also the role of international law in regulating the media, and reveals the communicative character of international law.

CLOUD AND INTERNET SECURITY Binh Nguyen, A while back I wrote two documents called 'Building a Cloud Service' and the 'Convergence Report'. They basically documented my past experiences and detailed some of the issues that a cloud company may face as it is being built and run. Based on what had transpired since, a lot of the concepts mentioned in that particular document are becoming widely adopted and/or are trending towards them. This is a continuation of that particular document and will attempt to analyse the issues that are faced as we move towards the cloud especially with regards to security. Once again, we will use past experience, research, as well as current events trends in order to write this particular report. Personal experience indicates that keeping track of everything and updating large scale documents is difficult and depending on the system you use extremely cumbersome. The other thing readers have to realise is that a lot of the time even if the writer wants to write the most detailed book ever written it's quite simply not possible. Several of my past works (something such as this particular document takes a few weeks to a few months to write depending on how much spare time I have) were written in my spare time and between work and getting an education. If I had done a more complete job they would have taken years to write and by the time I had completed the work updates in the outer world would have meant that the work would have meant that at least some of the content would have been out of date. Dare I say it, by the time that I have completed this report itself some of the content may have come to fruition as was the case with many of the technologies with the other documents? I very much see this document as a starting point rather than a complete reference for those who are interested in technology security. Note that the information contained in this document is not

considered to be correct nor the only way in which to do things. It's a mere guide to how the way things are and how we can improve on them. Like my previous work, it should be considered a work in progress. Also, note that this document has gone through many revisions and drafts may have gone out over time. As such, there will be concepts that may have been picked up and adopted by some organisations while others may have simply broken cover while this document was being drafted and sent out for comment. It also has a more strategic/business slant when compared to the original document which was more technically orientated. No illicit activity (as far as I know and have researched) was conducted during the formulation of this particular document. All information was obtained only from publicly available resources and any information or concepts that are likely to be troubling has been redacted. Any relevant vulnerabilities or flaws that were found were reported to the relevant entities in question (months have passed). Feedback/credit on any ideas that are subsequently put into action based on the content of this document would be appreciated. Any feedback on the content of this document is welcome. Every attempt has been made to ensure that the instructions and information herein are accurate and reliable. Please send corrections, comments, suggestions and questions to the author.
