New Trends in Internet Market Jose Manuel Garcia Sanchez,2007-06-04 Inhaltsangabe:Abstract: Internet. Broadband access. Mobile telephony. Fixed telephony. TV. Google. Yahoo!. Social networks. Mobile network operators. Telecommunication operators. Media conglomerates. Citizen media. All these terms have always been traditionally considered independent, but nowadays the interrelations among all of them happen more often and are becoming deeper: a new global scenario is being defined, in which communications, entertainment and information are converging, being provided by global conglomerates in our PCs, TVs and mobile devices. Nowadays technology advances will soon enable to

provide users with the best internet experience on the go . Services hosts, access providers, vendors, media owners and online players now realize that the barriers that traditionally have separated their markets dilute, bringing them all in a common-global market. Internet business models have now to converge with traditional structures and merges and acquisitions happen to reach competitive positions in foreign markets. The paradigm of internet will influence and change the most popular services as they are currently known. Fixed communication providers already suffer a loose of voice revenues in favor of the cheapest online communication. Mobile operators are facing now the same situations and find themselves on a delicate strategic situation: with VoIP nearing a competitive QoS, voice along doesn t seem to be for a long time enough as unique revenue source... Even watching TV will be soon an enriched personalized experience through the new IP end2end platforms. Will the online players be the ones successfully accomplishing a vertical expansion of their business? How will the mobile operators react? Which will be the paper of the network access providers? What about the media and content? How will all that affect the customers? In this document will be described the nowadays situation on the different markets involved in the converging scenario, and how the respective players situate themselves strategically. An initial global point of view will be followed by the definition of strategies and trends of each of them independently, and the determination of the merging points and relations among them. The effort will

be focus firstly on offering recommendations and comparisons concerning specific environments. Step by step the basis of the competition environment in the converging market will be defined, offering a strategic map of the [...]

<u>Structural Change and Evolution of China's Internet Society</u> Liu Shaojie,2022-11-28 This title investigates China's network society, both its online cyber society and offline real world society, by analyzing the trends and social foundations of society as network and the social challenges it poses, as well as structural changes in social space and social interaction. The first part of the book examines how network society in China forms and develops, analyzing the challenges and structural changes it poses. The author studies network power and uncertainties that lies in the supply, flow, and reception of a massive amount of information, revealing how this influences the government's administrative power as well as governance measures to stabilize social cohesion. The second part first discusses the social restructuring and characteristics of network social space in China. Based on case studies of several momentous social events, the spatial change

characterized by an integration of absence and presence space and its influence on social interaction and experience is elucidated, including active absence interaction, mediated experience, spatial representation, and social identities of network aggregation. The book will be a crucial reference for scholars and students studying sociology, network sociology, and contemporary Chinese society.

  Access Denied Ronald Deibert,John Palfrey,Rafal Rohozinski,Jonathan Zittrain,2008-01-25 A study of Internet blocking and filtering around the world: analyses by leading researchers and survey results that document filtering practices in dozens of countries. Many countries around the world block or filter Internet content, denying access to information that they deem too sensitive for ordinary citizens—most often about politics, but sometimes relating to sexuality, culture, or religion. Access Denied documents and analyzes Internet filtering practices in more than three dozen countries, offering the first rigorously conducted study of an accelerating trend. Internet filtering takes place in more than three dozen states worldwide, including many countries in Asia, the Middle East, and North Africa. Related Internet content-control mechanisms are also in place in Canada, the United States and a cluster of countries in Europe. Drawing on a just-completed survey of global Internet filtering undertaken by the OpenNet Initiative (a collaboration of the Berkman Center for Internet and Society at Harvard Law School, the Citizen Lab at the University of Toronto, the Oxford

Internet Institute at Oxford University, and the University of Cambridge) and relying on work by regional experts and an extensive network of researchers, Access Denied examines the political, legal, social, and cultural contexts of Internet filtering in these states from a variety of perspectives. Chapters discuss the mechanisms and politics of Internet filtering, the strengths and limitations of the technology that powers it, the relevance of international law, ethical considerations for corporations that supply states with the tools for blocking and filtering, and the implications of Internet filtering for activist communities that increasingly rely on Internet technologies for communicating their missions. Reports on Internet content regulation in forty different countries follow, with each two-page country profile outlining the types of content blocked by category and documenting key findings. Challenges for Next Generation Network Operations and Service Management
Yan Ma,Deokjai Choi,Shingo Ata,2008-10-16 th We are delighted to present the proceedings of the 11 Asia-Paci?c Network Operations and Management Symposium (APNOMS 2008) which was held in Beijing, China, during October 22—24, 2008. TheOrganizingCommittee(OC)selectedthethemeofthisyear'ssymposium as "Challenges for Next-Generation Network Operations and Service Mana- ment. " Research and development on next-generation networks (NGNs) have been carried out over the last few years and we are already seeing their - ployment and operations in many parts of Asia-Paci?c countries. We are also beginning to experience new and interesting services that utilize these NGNs. We are certain that we will see more deployment of NGNs and NGN services in the next few years. Thus, the operations and management of NGNs and their services are very important to the network operators and service providers. At the same

time, they are also concerned about new and more e?ective ways of performing the operations and management. This year, the APNOMS call for papers received 195 paper submissions from 19di?erentcountries,includingcountriesoutsidetheAsia-Paci?cregion(Europe, Middle-East, North and South America). Each paper was carefully reviewed by at least three international experts. Based on review scores, the APNOMS 2008 Technical ProgramCommittee discussed the selection of papers, and selected 43 high-quality papers (22. 1% of submissions) as full papers and 34 papers as short papers. Accepted papers were arrangedinto ten technical sessions and two short paper sessions (poster presentation).

  Access Contested Ronald Deibert,John Palfrey,Rafal Rohozinski,Jonathan Zittrain,2011-09-30 Experts examine censorship, surveillance, and resistance across Asia, from China and India to Malaysia and the Philippines. A daily battle for rights and freedoms in cyberspace is being waged in Asia. At the epicenter of this contest is China—home to the world's largest Internet population and what is perhaps the world's most advanced Internet censorship and surveillance regime in cyberspace. Resistance to China's Internet controls comes from both grassroots activists and corporate giants such as Google. Meanwhile, similar struggles play out across the rest of the region, from India and Singapore to Thailand and Burma, although each national dynamic is unique. Access Contested, the third volume from the OpenNet Initiative (a collaborative partnership of the Citizen Lab at the University

of Toronto's Munk School of Global Affairs, the Berkman Center for Internet and Society at Harvard University, and the SecDev Group in Ottawa), examines the interplay of national security, social and ethnic identity, and resistance in Asian cyberspace, offering in-depth accounts of national struggles against Internet controls as well as updated country reports by ONI researchers. The contributors examine such topics as Internet censorship in Thailand, the Malaysian blogosphere, surveillance and censorship around gender and sexuality in Malaysia, Internet governance in China, corporate social responsibility and freedom of expression in South Korea and India, cyber attacks on independent Burmese media, and distributed-denial-of-service attacks and other digital control measures across Asia.
