Wayward Dragon Adam K. Ghazi-Tehrani, Henry N. Pontell, 2022-02-14 This book provides a novel criminological understanding of white-collar crime and corporate lawbreaking in China focusing on: lack of reliable official data, guanxi and corruption, state-owned enterprises, media censorship, enforcement and regulatory capacity. The text begins with an introduction to the topic placing it in global perspective, followed by chapters examining the importance of comparative study, corruption as a major crime in China, case studies and etiology, domestic, regional and global consequences, and concluding theoretical and policy issues that can inform future research.

George W. Bush and China Chi Wang, 2008-12-16 This study analyzes the United States policies regarding China during the administration of President George W. Bush. Chi Wang examines the relationship between the United States and China from its tense origins to its current stability and shows that the China policy of the U.S. is ultimately based on pragmatic national interest that eventually overcomes short-term ideological difficulties or mistakes by inexperienced American administrations. Briefly touching on the China-policy legacy of Presidents George H.W. Bush and Bill Clinton, Wang provides a review of significant developments in U.S.-China policy during President George W. Bush's first term in office. By following with an analysis of the varied agendas of Bush's foreign policy advisors during his second term, readers are able to trace the influence of advisors on the president's China

policy. Wang chronicles the reordering of U.S. security priorities after September 11, showing how this prompted Washington to embrace China in a measured partnership and has resulted in the short-term stabilization of U.S.-China relations.

Linux Malware Incident Response: A

Practitioner's Guide to Forensic Collection and Examination of Volatile Data

Eoghan Casey, Cameron H. Malin, James M. Aquilina, 2013-04-12 Linux Malware Incident Response is a first look at the Malware Forensics Field Guide for Linux Systems, exhibiting the first steps in investigating Linux-based incidents. The Syngress Digital Forensics Field Guides series includes companions for any digital and computer forensic investigator and analyst. Each book is a toolkit with checklists for specific tasks, case studies of difficult situations, and expert analyst tips. This compendium of tools for computer forensics analysts and investigators is presented in a succinct outline format with cross-references to supplemental appendices. It is designed to provide the digital investigator clear and concise guidance in an easily accessible format for responding to an incident or conducting analysis in a lab. Chinese Migration and Economic Relations with

Europe Marco Sanfilippo, Agnieszka

Weinar, 2017-11-03 This book explores how far existing networks of overseas Chinese and new flows of migrants act as drivers of economic relations between China and the host countries. It considers migration, trade, the flow of capital, and foreign direct investment, includes both skilled and unskilled migrants, and outlines the complex different waves of migration flows. It includes detailed case studies, based on extensive original research, on the position in a range of European countries, and concludes with policy-oriented analysis and with an overall assessment of how far the Chinese diaspora matters in stimulating increased bilateral economic activity and stronger bilateral economic relationships.

Computer and Computing Technologies in

Agriculture Daoliang Li, Yingyi Chen, 2012-01-15 The three-volume set IFIP AICT 368-370 constitutes the refereed post-conference proceedings of the 5th IFIP TC 5, SIG 5.1 International Conference on Computer and Computing Technologies in Agriculture, CCTA 2011, held in Beijing, China, in October 2011. The 189 revised papers presented were carefully selected from numerous submissions. They cover a wide range of interesting theories and applications of information technology in agriculture, including simulation models and decision-support systems for agricultural production, agricultural product quality testing, traceability and e-commerce technology, the application of information and communication technology in agriculture, and universal information service technology and service systems

development in rural areas. The 62 papers included in the first volume focus on decision support systems, intelligent systems, and artificial intelligence applications.

The Chinese Electronics Industry Michael Pecht, Chung-Shing Lee, Wang Yong Wen, Zong Xiang Fu, Jiang Jun Lu, 2018-12-19 The Chinese Electronics Industry documents the technologies, capabilities, and infrastructure that has made China a major player in the Asian electronics industry. This book covers the major segments of China's electronics industry, including semiconductors, packaging, printed circuit boards, computer hardware and software, telecommunications, and electronic systems. In addition, this book examines the role of government, research organizations, educational institutions, and major companies in establishing an infrastructure where the industry can flourish. Specifically, this book will help readers: Comprehend the historical developments, current status, and future growth of China's electronics industry Understand the cultural, economic, and technological factors that drive and inhibit market access and success in China Make decisions on strategic issues, such as market entry, establishing joint ventures or strategic alliances with Chinese electronics companies in order to access world's largest emerging market Formulate strategy to cooperate and compete in the global electronics industry

The Internet in China Zixue Tai, 2007-05-07 The Internet in China examines the cultural and political ramifications of the Internet for Chinese society. The rapid growth of the Internet

has been enthusiastically embraced by the Chinese government, but the government has also rushed to seize control of the virtual environment. Individuals have responded with impassioned campaigns against official control of information. The emergence of a civil society via cyberspace has had profound effects upon China--for example, in 2003, based on an Internet campaign, the Chinese Supreme People's Court overturned the ruling of a local court for the first time since the Communist Party came to power in 1949. The important question this book asks is not whether the Internet will democratize China, but rather in what ways the Internet is democratizing communication in China. How is the Internet empowering individuals by fostering new types of social spaces and redefining existing social relations?

China's Cyber Power Nigel Inkster, 2018-10-09
China's emergence as a major global power is reshaping the cyber domain. The country has the world's largest internet-user community, a growing economic footprint and increasingly capable military and intelligence services. Harnessing these assets, it is pursuing a patient, assertive foreign policy that seeks to determine how information and communications technologies are governed and deployed. This policy is likely to have significant normative impact, with potentially adverse implications for a global order that has been shaped by Western liberal democracies. And, even as China goes out into the world, there are signs that new technologies are becoming powerful tools for domestic social

control and the suppression of dissent abroad. Western policymakers are struggling to meet this challenge. While there is much potential for good in a self-confident China that is willing to invest in the global commons, there is no guarantee that the country's growth and modernisation will lead inexorably to democratic political reform. This Adelphi book examines the political, historical and cultural development of China's cyber power, in light of its evolving internet, intelligence structures, military capabilities and approach to global governance. As China attempts to gain the economic benefits that come with global connectivity while excluding information seen as a threat to stability, the West will be forced to adjust to a world in which its technological edge is fast eroding and can no longer be taken for granted.

The Rise of China and International Security

Kevin J. Cooney, Yoichiro Sato, 2008-08-29 This edited volume offers diverse and comprehensive views of China's rise and its implications to the East Asian region and beyond. The economic growth of China, initially started in the late-1970s with domestic and rural reforms, has been increasingly driven by China's industrialization and integration into the regional and global markets. The growth and integration of China, however, has exposed China's closest neighbours and even more remote countries to its various (previously internal) problems, and the lagging political openness of China has often negatively impacted on cooperation with other countries in dealing with these problems (i.e. trans-border pollutions,

epidemics, illegal migrations, organized crimes, financial management, etc.). This book integrates geopolitical and domestic political analysis of China with a broad set of transnational security issues, and includes a diversity of regional views. In doing so, it explores further than the dichotomous debate between the American realists and liberals, adding finesse to the often simplified discussions on how to deal with the rising China. This book will be of interest to students of Asian Politics, Security Studies and International Relations.

AI Development and the 'Fuzzy Logic' of Chinese Cyber Security and Data Laws Max

Parasol, 2021-12-16 The book examines the extent to which Chinese cyber and network security laws and policies act as a constraint on the emergence of Chinese entrepreneurialism and innovation. Specifically, how the contradictions and tensions between data localisation laws (as part of Network Sovereignty policies) affect innovation in artificial intelligence (AI). The book surveys the globalised R&D networks, and how the increasing use of open-source platforms by leading Chinese AI firms during 2017–2020, exacerbated the apparent contradiction between Network Sovereignty and Chinese innovation. The drafting of the Cyber Security Law did not anticipate the changing nature of globalised AI innovation. It is argued that the deliberate deployment of what the book refers to as 'fuzzy logic' in drafting the Cyber Security Law allowed regulators to subsequently interpret key terms regarding data in that Law in a fluid and flexible fashion to benefit Chinese

innovation.

American Political Discourse on China Michelle Murray Yang, 2017-06-14 Despite the U.S. and China's shared economic and political interests, distrust between the nations persists. How does the United States rhetorically navigate its relationship with China in the midst of continued distrust? This book pursues this question by rhetorically analyzing U.S. news and political discourse concerning the 2008 Beijing Olympic Games, the 2010 U.S. midterm elections, the 2012 U.S. presidential election, and the 2014-2015 Chinese cyber espionage controversy. It finds that memory frames of China as the yellow peril and the red menace have combined to construct China as a threatening red peril. Red peril characterizations revive and revise yellow peril tropes of China as a moral, political, economic and military threat by imbuing them with anti-communist ideology. Tracing the origins, functions, and implications of the red peril, this study illustrates how historical representations of the Chinese threat continue to limit understanding of U.S.-Sino relations by keeping the nations' relationship mired in the past.

Cyber Dragon Dean Cheng, 2016-11-14 This book provides a framework for assessing China's extensive cyber espionage efforts and multi-decade modernization of its military, not only identifying the what but also addressing the why behind China's focus on establishing information dominance as a key component of its military efforts. China combines financial firepower—currently the world's second largest

economy—with a clear intent of fielding a modern military capable of competing not only in the physical environments of land, sea, air, and outer space, but especially in the electromagnetic and cyber domains. This book makes extensive use of Chinese-language sources to provide policy-relevant insight into how the Chinese view the evolving relationship between information and future warfare as well as issues such as computer network warfare and electronic warfare. Written by an expert on Chinese military and security developments, this work taps materials the Chinese military uses to educate its own officers to explain the bigger-picture thinking that motivates Chinese cyber warfare. Readers will be able to place the key role of Chinese cyber operations in the overall context of how the Chinese military thinks future wars will be fought and grasp how Chinese computer network operations, including various hacking incidents, are part of a larger, different approach to warfare. The book's explanations of how the Chinese view information's growing role in warfare will benefit U.S. policymakers, while students in cyber security and Chinese studies will better understand how cyber and information threats work and the seriousness of the threat posed by China specifically.

China's Electronics Industry Michael Pecht, 2006-08-10 China's Electronics Industry is a comprehensive and current report on the technologies, manufacturing capabilities, and infrastructure that have made China a major player in the electronics industry. Not only does it cover the past, present, and future of important

electronic technologies, but also the pros and cons of conducting business in China. This is an important reference for any company planning a venture in China as well as those who have already taken their first steps. It will also be of great interest to researchers and policy makers who need to know more about the role of central government in promoting strategic industries and assisting national science and technology development. Much of the data contained in the report is from 2006. No country has burst onto the economic scene as dramatically as China has in the past decade. It is the world's largest producer of many electronic products and has a leading edge semiconductor industry. This timely and comprehensive report from America's leading authority is a critical for anyone who is interested in working with China in the electronics field including business managers, academics, government institutes, foreign investors, as well as those who are interested in the past, present and future growth of China's Electronics Industry. If you are thinking about doing business in china's electronics industry, you must have this book.

Cyberspace in Peace and War, Second Edition
Martin Libicki, 2021-09-15 This updated and expanded edition of *Cyberspace in Peace and War* by Martin C. Libicki presents a comprehensive understanding of cybersecurity, cyberwar, and cyber-terrorism. From basic concepts to advanced principles, Libicki examines the sources and consequences of system compromises, addresses strategic aspects of cyberwar, and defines cybersecurity in the context of military operations while highlighting unique aspects of the digital battleground and strategic uses of cyberwar. This new edition provides updated analysis on cyberespionage, including the enigmatic behavior of Russian actors, making this volume a timely and necessary addition to the cyber-practitioner's library. *Cyberspace in Peace and War* guides readers through the complexities of cybersecurity and cyberwar and challenges them to understand the topics in new ways. Libicki provides the technical and geopolitical foundations of cyberwar necessary to understand the policies, operations, and strategies required for safeguarding an increasingly online infrastructure.

Insight Turkey 2018 □ □- Winter 2018 (Vol. 20, No.1) , Today, the world system is in a transition and experiencing a deep international crisis. The U.S. has begun to oppose the basic international institutions such as the United Nations and its subsidiary organs and specialized agencies, even though most of these were established with

American motivation. The hegemon state, the U.S., has been alienating most of its partners and even allies. The U.S. governments have begun to focus on the national setting and to underestimate the international one; to favor unilateral policies over multilateral ones. The presidency of Donald Trump has expedited this process. American rejection of providing global public goods such as international security and free trade has led to a systemic crisis. The relative decline of American power coincides with the persistent rise of China. Those who claim that the days of Pax-Americana are numbered assert that the rise of China will determine the future of the world system. China has begun to expand its influence worldwide. For this purpose it has established alternative political and economic international institutions such as the Shanghai Cooperation Organization (SCO) and the Asian Infrastructure Investment Bank (AIIB). Furthermore, China leads the establishment of some other international organizations as well. BRICS is only one of these formations challenging the political hegemony of the West, led by the U.S. One of the most promising Chinese projects is the One Belt, One Road (OBOR) Project, aspiring to connect the East (China) to the West (the world markets). It is expected that, on its completion, the OBOR Project will take China to the center of the world economy and politics. China has been the fastest growing economy in the world for the last thirty years. Its share of the world trade has increased dramatically, recording the highest share in world exports for several years. China has been enjoying economic transactions with all

major international actors with more than 200 partners in exports and imports. However, in terms of per capita income China still lags behind the advanced Western countries. Furthermore, according to the calculations made by the World Bank and IMF, Chinese per capita income is still lower than the world average. China recently began to invest in the political and military sphere in the non-Western world. It has military bases in its near abroad and in the African continent. That is, Chinese economic influence and technological leadership is supported by its political and military power. In spite of the increase in Chinese military and political might, it is careful not to challenge the U.S. and the West. There are several reasons for this policy. First of all, China is aware of its vulnerabilities. It suffers some economic and political inconsistencies and weaknesses. For instance, it has to fortify its regional dominance first in the South China Sea and achieve its longtime one-China policy as a precondition for a possible global hegemony. Second, China wants to win the global rivalry without resorting to war with the current hegemon. Therefore, Chinese leaders refrain from opposing the American hegemony politically. Even though it has introduced some international institutions, the Chinese leadership does not propose a political and diplomatic alternative to the West. It will take time for China to offer a full-scale global leadership alternative to the world, since the global hegemony requires not only economic and military power but also values and norms for cultural hegemony. Lastly, China is not

ready to take the global responsibility, since it brings high costs. As long as the current American hegemony works in favor of China, there is no need for China to change the course of its development. In the light of these developments, this issue of Insight Turkey focuses on some of the most important topics related to China's persistent rise in the international system. More specifically, this issue postulates on how to read and understand China's policies towards global powers, i.e. the U.S. and Russia, and regional powers, i.e. India and Turkey. Africa has once again returned to the attention of the global powers after being left for many years in the shadow of western politics. In recent years, Africa has become the center of China's public, economic and military diplomacy. As it may be expected, China's investments in Africa are not totally 'welcomed' by the U.S. Earl Conteh-Morgan in his commentary focuses on the strategic rivalry between China and the U.S. in Africa. Conteh-Morgan argues that their rivalry has progressed from mild to intense, with both powers increasing their activities on the continent and decreasing Africa's erstwhile marginalization. Another rivalry that shapes China's foreign policies in the region is that with India. Especially, since the Doklam Plateau incident in mid-2017, the expectation of a possible tension between the two regional powers is ever present. Taking this into consideration Bruno Maçães, in his commentary, ponders the economic and strategic rivalry between China and India along with a number of dimensions: infrastructure, border disputes, sea power, and

trade.

War at the Speed of Light Louis A. Del Monte, 2021-03 *War at the Speed of Light* describes the revolutionary and ever-increasing role of directed-energy weapons (such as laser, microwave, electromagnetic pulse, and cyberspace weapons) in warfare. Louis A. Del Monte delineates the threat that such weapons pose to disrupting the doctrine of Mutually Assured Destruction, which has kept the major powers of the world from engaging in nuclear warfare. Potential U.S. adversaries, such as China and Russia, are developing hypersonic missiles and using swarming tactics as a means to defeat the U.S. military. In response, the U.S. Department of Defense established the 2018 National Security Strategy, emphasizing directed-energy weapons, which project devastation at the speed of light and are capable of destroying hypersonic missiles and enemy drones and missile swarms. Del Monte analyzes how modern warfare is changing in three fundamental ways: the pace of war is quickening, the rate at which weapons project devastation is reaching the speed of light, and cyberspace is now officially a battlefield. In this acceleration of combat called "hyperwar," Del Monte shows how disturbingly close the world is to losing any deterrence to nuclear warfare.

The Problem of China Bertrand Russell, 2022-07-20 'The Problem of China' is a historical and educational book by famed philosopher and Nobel Literature Prize laureate Bertrand Russell. In 1920, he spent a year in China as Professor of Philosophy at the University of Peking (later

Beijing). His lectures on mathematical logic and philosophy were well received there including by Mao Tse Tung, who attended some of Russell's talks. Written at a time when China was largely viewed by the West as under-developed, *The Problem of China* sees Russell make his prediction that China, by her resources and her population, is capable of being the greatest power in the world after the United States.
