English for academic purposes : learning english through the web Barahona Fuentes, Claudia; Arnó Macià, Elisabet,;2001 This is a virtual elective course for university students who need to use English in their academic work. This means that this subject is not related to a particular degree course (engineering, biology, law, etc.) but it aims to help students develop their language learning skills and at the same time to foster extensive practice in language use, with the Internet as the basic learning tool. Therefore, this is an instrumental course which is essentially practical and emphasizes communication rather than language study. It differs from a traditional language course in that it has been designed basically as a tool to help

students learn to learn English. That is to say, the syllabus is not based on specific language content graded in terms of difficulty, but it is composed of a series of practical activities to encourage students to learn English effectively and independently, by choosing materials suited to their level of English and to their learning style. For this reason, this course can be taken by students with different levels of English as long as they are familiar with the basic structures of the language and can more or less communicate in English

**The Political Economy of Economic Reform in the Pacific** Ron Duncan, 2011-07-01 Over the last several years, Vanuatu has become one of the fastest growing economies in the Pacific region driven primarily by tourism, construction, and aid inflows. The achievement of strong economic growth has also occurred on the back of improved economic policy, effective fiscal management, and improved environment for private sector development. While recent gains have been impressive, more remains to be done to sustain growth and ensure the benefits are distributed throughout the nation. The Government is now on a sound financial footing and is well placed to address key development issues. The report discusses options for responding to these needs with a view to helping guide public policy formulation in Vanuatu.

**Telecommunications Regulatory Reform in Small Island Developing States** Siope Vakataki 'Ofa, 2011-11-15 This book adopts an approach of 'mixed-method research' with an in-depth qualitative comparative case study analysis triangulated by a quantitative statistical analysis. In particular, the book attempts to capture Small Island Developing States control variables in its empirical analysis, often omitted from telecommunications empirical studies due to limited data. Based on the smallest and most isolated small

island states in the World, the research's comparative case study analysis was conducted in five Pacific Island States (Fiji, Papua New Guinea, Samoa, Tonga and Vanuatu). The book documents the early account of domestic telecommunications policies in Pacific Island case studies deemed useful for future research. In addition, the book proposes concrete policy insights to Small Island Developing State governments, telecommunications operators, academics and relevant international institutions. The book attempts to link three different strands of academic literatures – namely 'islandness', 'telecommunications policy reform' and 'international trade agreements (WTO)' – through analyzing the political economy of telecommunications reform in an island economy context and the role of the fixed-rules of the World Trade Organization on the credibility of telecommunications reform.
