Ubiquitous Computing: Design, Implementation and Usability Theng, Yin-Leng, Duh, Henry B. L., 2008-05-31 Interactive systems in the mobile, ubiquitous, and virtual environments are at a stage of development where designers and developers are keen to find out more about design, use and usability of these systems. Ubiquitous Computing: Design, Implementation and Usability highlights the emergent usability theories, techniques, tools and best practices in these environments. This book shows that usable and useful systems are able to be achieved in ways that will improve usability to enhance user experiences. Research on the usability issues for young children, teenagers, adults, and the elderly is presented, with different techniques for the mobile, ubiquitous, and virtual environments.

Internet Guide to Knowledge Management and Intellectual Capital Sabine Pekar, 2002-03-07 Inhaltsangabe: Abstract: This survey has shown that, although the internet is full of information, it is difficult to find the information required fast. Before starting an internet survey, it is essential to be conscious of the intention of the search and the expected results and to translate this into one or more keywords. The intention of the keyword searches knowledge management and intellectual capital was to find out how the topic is treated on different pages. The categorization by content has shown that a main part of the links can be assigned in the advertisement categories. This is the case for both, the hits of MetaCrawler and those of Umap. A further community of the results of the two search instruments is that the categories knowledge base and best practices only take a small part whereas the categories content discussion and collection of resources are relatively well-attended. Great importance has been attached to the category content discussion in the index and chapter 6 is fully dedicated to interesting links concerning the content. This is because the discussion of the topics, combined with definitions and explanations, is the background and the basis for the rest of the categories. As the assignment to the category content discussion does not declare anything about the quality of the discussions, the index in chapter 4 has to be included in the study. Strictly speaking, a great part of those links is dedicated to advertisement and gives some explanations concerning the topics. It has been detected that most of the pages with content discussion give only a short introduction into the topic. The pages that examine the topics more closely are an exception to the rule. Five links of this minority are introduced in chapter 6. Two of them are very interesting pages concerning the content. They are listed at top position, because different opinions concerning knowledge management and intellectual capital are introduced, the topics are treated in great detail and the explanations are good and quite easy to duplicate. In order to find out, if the results are capable to represent the totality, the reliability of the categorization, built up with Umap (artificial intelligence) and that built by human intelligence have been analyzed with the means of hypotheses. The test of the hypotheses, that are based on a comparison of the results and processes of the categorizations, has shown that the categorization by [...]

An Internet-style Approach to Managing Wireless Link Errors David A. Eckhardt, 2002 Abstract: As wired computer networks support increasingly sophisticated applications and wireless local area networks become ubiquitous and fast, it is more natural for users to seek a 'wireless Internet' experience that is qualitatively the same as that provided by the wired Internet. However, wireless LANs pose two fundamental challenges to this vision. Harsh and dynamic error environments challenge end-to-end adaptation at the transport and application layers. In addition, dynamic and location-dependent errors challenge the notion of 'fair' scheduling of flows sharing a wireless link. This dissertation advances the claim that a combination of protocol-blind link-level error control and error-sensitive link scheduling effectively addresses these two challenges. The first step is a bit-level trace-based analysis of the error environment provided by a particular wireless link technology (AT & T WaveLAN I) in the face of attenuation and interference. Based on the insights revealed by this analysis, the next step is designing an adaptive link-level error control module. Finally, we propose a new notion of fairness appropriate for error-prone wireless links. This new scheduling approach balances application sensitivity to error-induced throughput changes against the need to preserve link efficiency. The proposed mechanisms are evaluated by deploying them in an actual operating system, running on real hardware, and subjecting them to trace replay of the error environments we observed. Particular attention is given to the interaction between link-level error control and TCP's end-to-end error and congestion control mechanisms. The result is a system that can noticeably improve application-level throughput in a wide variety of error environments and can sensibly allocate limited and dynamic network capacity among network flows.

TULIP: A Link-Level Protocol for Improving TCP Over Wireless Links, 1999 We present the transport unaware link improvement protocol (TULIP), which dramatically improves the performance of TCP over lossy wireless links, without competing with or modifying the transport- or network-layer protocols. TULIP is tailored for the half-duplex radio links available with today's commercial radios and provides a MAC acceleration feature applicable to collision-avoidance MAC protocols (e.g., IEEE 802.11) to improve throughput. TULIP's timers rely on a maximum propagation delay over the link, rather than

performing a round-trip time estimate of the channel delay. The protocol does not require a base station and keeps no TCP state. TULIP is exceptionally robust when bit error rates are high; it maintains high goodput, i.e., only those packets which are in fact dropped on the wireless link are retransmitted and then only when necessary. The performance of TULIP is compared against the performance of the Snoop protocol (a TCP-aware approach) and TCP without link-level retransmission support. The results of simulation experiments using the actual code of the Snoop protocol show that TULIP achieves higher throughput, lower packet delay, and smaller delay variance.

Guide to Wireless Mesh Networks Sudip Misra,Subhas Chandra Misra,Isaac Zhang,2009-09-15 Overview and Goals Wireless communication technologies are undergoing rapid advancements. The last few years have experienced a steep growth in research in the area of wireless mesh networks (WMNs). The attractiveness of WMNs, in general, is attributed to their characteristics such as the ability to dynamically self-organize and self-configure, coupled with the ability to maintain mesh connectivity leading, in effect, to low set-up/installation costs, simpler maintenance tasks, and service coverage with high reliability and fault-tolerance. WMNs also support their integration with existing wireless networks such as cellular networks, WLANs, wireless-fidelity (Wi-Fi), and worldwide interoperability of microwave access (WiMAX). WMNs have found useful applications in a broad range of domains such as broadband home networking, commercial/business networking, and community networking – particularly attractive in offering broadband wireless access with low initial installation and set-up costs. Even though WMNs have emerged to be attractive and they hold great promises for our future, there are several challenges that need to be addressed. Some of the wellknown challenges are attributed to issues relating to scalability (significant drop in throughput with the increase in the number of nodes), multicasting, offering quality of service guarantees, energy efficiency, and security. This handbook attempts to provide a comprehensive guide on fundamental key topics coupled with new ideas and results in the areas of WMNs. The book has been prepared keeping in mind that it needs to prove itself to be a valuable resource dealing with both the important core and the specialized issues in WMNs.
