Polish Revolutionary Populism

Peter Brock,1977-12-15 Polish populism, which advocated agrarian socialism by either revolutionary or reformist means, emerged first among the émigrés who had left Poland after the Russians defeated the nationalist uprising of 1830. In exile they came into contact with the ideas of French 'Utopian' socialists such as Babeuf, Saint-Simon,

Fourier, and Cabet, and they attempted to adapt these ideas to the very different conditions prevailing in their east European homeland. Thus this version of populism preceded in time, and probably influenced, the emergence of the ideas of the better-known Russian narodniks. Polish Revolutionary Populism describes the activities and conflicting ideologies of the various organizations, abroad and in partitioned Poland, which were struggling for national independence and for agrarian and social reform. Like the author's recent work, *The Slovak National Awakening*, this book deals with the emerging national aspirations characteristic of central and eastern Europe at the time and with the variety of political and social theories that made debate so acrimonious.

*User Modeling 2001* Mathias Bauer, Piotr J. Gmytrasiewicz, Julita Vassileva, 2001-06-27 This book constitutes the refereed proceedings of the 8th International Conference on User Modeling, UM 2001, held in Sonthofen, Germany in July 2001. The 19 revised full papers and 20 poster summaries presented together with summaries of 12 selected student presentations were carefully reviewed and selected from 79 submissions. The book offers topical sections on acquiring user models from multi-modal user input; learning interaction models; user models for natural language interpretation, processing, and generation; adaptive interviewing for acquiring user preferences and product customization; supporting user collaboration through adaptive agents; student modeling; and adaptive information filtering, retrieval, and browsing.

**GMPLS** Adrian Farrel, Igor Bryskin, 2005-12-20 The last two years have seen significant developments in the standardization of GMPLS and its implementation in optical and other networks. *GMPLS: Architecture and Applications* brings you completely up to date, providing the practical information you need to put the growing set of GMPLS-supported services to work and manage them effectively. This book begins by defining GMPLS's place in a transport network, leveraging your knowledge of MPLS to give you an understanding of this radically new control plane technology. An overview of GMPLS protocols follows, but the real focus is on what comes afterwards: in-depth examinations of the architectures underpinning GMPLS in real-world network environments and current and emerging GMPLS applications. This one-of-a-kind resource delivers immensely useful information for software architects, designers and programmers, hardware developers, system testers, and network operators--and also for managers and other decision-makers. Written by two industry researchers at the forefront of the development of GMPLS. Provides a practical look at GMPLS protocols for signaling, routing, link and resource management, and traffic engineering. Delves deep into the world of GMPLS applications, including traffic engineering, path computation, layer one VPNs, point-to-multipoint connectivity, service management, and resource protection. Explores three distinct GMPLS control plane architectures: peer, overlay, and hybrid, and explains the GMPLS UNI and NNIs. Explains how provisioning challenges can be met in multi-region networks and details the provisioning systems and tools relied on by the GMPLS control plane, along with the standard MIB modules used to manage a GMPLS system.

Law, Public Policies and Complex Systems: Networks in Action Romain Boulet, Claire Lajaunie, Pierre Mazzega, 2019-05-07 This book investigates how various scientific communities – e.g. legal scientists, political scientists,

sociologists, mathematicians, and computer scientists – study law and public policies, which are portrayed here as complex systems. Today, research on law and public policies is rapidly developing at the international level, relying heavily on modeling that employs innovative methods for concrete implementation. Among the subject matter discussed, law as a network of evolving and interactive norms is now a prominent sphere of study. Similarly, public policies are now a topic in their own right, as policy can no longer be examined as a linear process; rather, its study should reflect the complexity of the networks of actors, norms and resources involved, as well as the uncertainty or weak predictability of their direct or indirect impacts. The book is divided into three main parts: complexity faced by jurists, complexity in action and public policies, and complexity and networks. The main themes examined concern codification, governance, climate change, normative networks, health, water management, use-related conflicts, legal regime conflicts, and the use of indicators.

Exporting Services Arti Grover Goswami, Aaditya Mattoo, Sebastian Saez, 2011-11-15 Through country case studies as well as econometric analysis, this book attempts to identify the factors that have helped developing countries succeed in exporting services. Plato and the Nerd Edward Ashford Lee,2017-08-25 How humans and technology evolve together in a creative partnership. In this book, Edward Ashford Lee makes a bold claim: that the creators of digital technology have an unsurpassed medium for creativity. Technology has advanced to the point where progress seems limited not by physical constraints but the human imagination. Writing for both literate technologists and numerate humanists, Lee makes a case for engineering—creating technology—as a deeply intellectual and fundamentally creative process. Explaining why digital technology has been so transformative and so liberating, Lee argues that the real power of technology stems from its partnership with humans. Lee explores the ways that engineers use models and abstraction to build inventive artificial worlds and to give us things that we never dreamed of—for example, the ability to carry in our pockets everything humans have ever published. But he also attempts to counter the runaway enthusiasm of some technology boosters who claim everything in the physical world is a computation—that even such complex phenomena as human cognition are software operating on digital data. Lee argues that the evidence for this is weak, and the likelihood that nature has limited itself to processes that conform to today's notion of digital computation is remote. Lee goes on to argue that artificial intelligence's goal of reproducing human cognitive functions in computers vastly underestimates the potential of computers. In his view, technology is

coevolving with humans. It augments our cognitive and physical capabilities while we nurture, develop, and propagate the technology itself. Complementarity is more likely than competition.

Intelligent Transportation Systems – Problems and Perspectives Aleksander Sładkowski, Wiesław Pamuła, 2016-10-15 This book presents a discussion of problems encountered in the deployment of Intelligent Transport Systems (ITS).
