Pensées Blaise Pascal, 1657-1662 Blaise Pascal, the precociously brilliant contemporary of Descartes, was a gifted mathematician and physicist, but it is his unfinished apologia for the Christian religion upon which his reputation now rests. The *Pensées* is a collection of philosophical fragments, notes and essays in which Pascal explores the contradictions of human nature in psychological, social, metaphysical and - above all - theological terms. Mankind emerges from Pascal's analysis as a wretched and desolate creature within an impersonal universe, but who can be transformed through faith in God's grace. Genetic Glass Ceilings Jonathan Gressel, 2020-03-03 As the world's population rises to an expected ten billion in the next few generations, the challenges of feeding humanity and maintaining an ecological balance will dramatically increase. Today we rely on just four crops for 80 percent of all consumed calories: wheat, rice, corn, and soybeans. Indeed, reliance on these four crops may also mean we are one global plant disease outbreak away from major famine. In this revolutionary and controversial book, Jonathan Gressel argues that alternative plant crops lack the genetic diversity necessary for wider domestication and that even the Big Four have reached a "genetic glass ceiling": no matter how much they are bred, there is simply not enough genetic diversity available to significantly improve their agricultural value. Gressel points the way through the glass ceiling by advocating transgenics—a technique where genes from one species are transferred to another. He maintains that with simple safeguards the technique is a safe solution to the genetic glass ceiling conundrum. Analyzing alternative crops—including palm oil, papaya, buckwheat, tef, and sorghum—Gressel demonstrates how gene manipulation could enhance their potential for widespread domestication and reduce our dependency on the Big Four. He also describes a number of ecological benefits that could be derived with the aid of transgenics. A compelling synthesis of ideas from agronomy, medicine, breeding, physiology, population genetics, molecular biology, and biotechnology, *Genetic Glass Ceilings* presents transgenics as an inevitable and desperately necessary approach to securing and diversifying the world's food supply.

Two Sides of a Barricade Christian Scholl,2012-01-01 *Two Sides of a Barricade* argues that to construct global democracy, conflict and dissent must be taken seriously. Christian Scholl explores the political significance of the confrontations within four sites of interaction: bodies, space, communication, and law. Each site of struggle provides a different entry point to understand the influence of protester and police tactics on each other. At the same time, the four sites of struggle allow a comprehensive analysis of how the contestation of global hegemonic forces during summit protests trigger a preemptive shift in social control through increased deployment of biopolitical forms of power.

The Knowledge Illusion Steven Sloman, Philip Fernbach, 2017-03-14 "The Knowledge Illusion is filled with insights on how we should deal with our individual ignorance and collective wisdom." —Steven Pinker We all think we know more than we actually do. Humans have built hugely complex societies and technologies, but most of us don't even know how a pen or a toilet works. How have we achieved so much despite understanding so little? Cognitive scientists Steven Sloman and Philip Fernbach argue that we survive and thrive despite our mental shortcomings because we live in a rich community of knowledge. The key to our intelligence lies in the people and things around us. We're constantly drawing on information and expertise stored outside our heads: in our bodies, our environment, our possessions, and the community with which we interact—and usually we don't even realize we're doing it. The human mind is both brilliant and pathetic. We have mastered fire, created democratic institutions, stood on the moon, and sequenced our genome. And yet each of us is error prone, sometimes irrational, and often ignorant. The fundamentally communal nature of intelligence and knowledge explains why we often assume we know more than we really do, why political opinions and false beliefs are so hard to change, and why individual-oriented approaches to education and management frequently fail. But our collaborative minds also enable us to do amazing things. The Knowledge Illusion contends that true genius can be found in the ways we create intelligence using the community around us.

Yoga Sequencing Mark Stephens, 2012-09-18 *Yoga Sequencing: Designing Transformative Yoga Classes* presents the essential principles and methods for planning and sequencing yoga classes. Addressing one of the most popular topics in the yoga profession, this book offers sixty-seven model sequences of yoga poses (asanas) that cover the broad range of yoga student experience, including multiple sequences for beginning, intermediate, and advanced students; yoga for kids, teens, women across the life cycle, and seniors; classes to relieve depression and anxiety; and sequences for each of the major chakras and ayurvedic constitutions. Each sequence provides guidance for teaching the different breathing (pranayama) and meditation techniques that give yoga its transformative power. Enhanced with over 2,000 instructional photos and an elaborate guide to the constituent elements of over 150 yoga asanas, the book draws equally from ancient yoga philosophy and contemporary insights into functional anatomy, biomechanics, and kinesiology. The nuanced interrelationships among asanas within and between the seven asana families are explored and the anatomy of opening and stabilizing each pose is explained for sequences designed around specific needs and intentions.

A comprehensive appendix includes a glossary of yoga-related terms, an alphabetical asana index with thumbnail photographs of each asana, a class planning worksheet, representative sequences from several popular styles of hatha yoga, and a list of resources for further exploring sequencing and the larger practice of teaching yoga.
