*Child Health and the Environment* Donald T. Wigle, 2003-03-20 This is the first textbook to focus on environmental threats to child health. It will interest professionals and graduate students in public health, pediatrics, environmental health, epidemiology, and toxicology. The first three chapters provide overviews of key children's environmental health issues as well as the role of environmental epidemiology and risk assessment in child health protection. Overarching themes are the susceptibility of the rapidly developing fetus and infant to environmental toxicants, the importance of modifying factors (e.g. poverty, genetic traits, nutrition), the role of health outcome and exposure monitoring, uncertainties surrounding environmental exposure limits, and the importance of timely intervention. Later chapters address the health effects of metals, PCBs, dioxins, pesticides, hormonally active agents, radiation, indoor and outdoor air pollution, and water contaminants. In analyzing potential environmental hazards, the author addresses both biologic and epidemiologic evidence, including the likelihood of causal relationships. Among the health outcomes he discusses are developmental,

reproductive, and neurobehavioral effects, respiratory disease, cancer, and waterborne infectious diseases. These discussions cover environmental exposure sources/indicators, interventions, and standards, and conclude with a summary of calls for an improved science base to guide public health decisions and protect child health.

**Red Shambhala** Andrei Znamenski, 2012-12-19 Many know of Shambhala, the Tibetan Buddhist legendary land of spiritual bliss popularized by the film, Shangri-La. But few may know of the role Shambhala played in Russian geopolitics in the early twentieth century. Perhaps the only one on the subject, Andrei Znamenski's book presents a wholly different glimpse of early Soviet history both erudite and fascinating. Using archival sources and memoirs, he explores how spiritual adventurers, revolutionaries, and nationalists West and East exploited Shambhala to promote their fanatical schemes, focusing on the Bolshevik attempt to use Mongol-Tibetan prophecies to railroad Communism into inner Asia. We meet such characters as Gleb Bokii, the Bolshevik secret police commissar who tried to use Buddhist techniques to conjure the ideal human; and Nicholas Roerich, the Russian

painter who, driven by his otherworldly Master and blackmailed by the Bolshevik secret police, posed as a reincarnation of the Dalai Lama to unleash religious war in Tibet. We also learn of clandestine activities of the Bolsheviks from the Mongol-Tibetan Section of the Communist International who took over Mongolia and then, dressed as lama pilgrims, tried to set Tibet ablaze; and of their opponent, Ja-Lama, an “avenging lama” fond of spilling blood during his tantra rituals.

**The 3G IP Multimedia Subsystem (IMS)** Gonzalo Camarillo, Miguel-Angel García-Martín, 2005-04-08 If you need to know the IMS vision you need to read this book.... The IMS (IP Multimedia Subsystem) is the exciting new technology that will merge the Internet with the cellular world. It will make Internet technologies such as the web, email, instant messaging, presence, and videoconferencing available nearly everywhere. The 3G IP Multimedia Subsystem (IMS) provides a thorough overview of the IMS and its technologies. Throughout, the authors first describe how each technology works on the Internet and then explain how the same technology is adapted to work in the IMS, enabling readers to take advantage of any current and future Internet service. Presents an

introduction to the IMS - its goals, history, vision, the organizations involved in its standardization and architecture Discusses the signalling plane of the IMS including protocols, such as SIP and Diameter, used between the IMS architectural entities. Also describes how the IETF developed these protocols and how they are used in the IMS architecture Describes the media plane of the IMS and discusses Internet protocols that are not currently used in the IMS but may be in the future Provides SIP-based service examples such as presence, instant messaging and Push-to-Talk Engineers, programmers, business managers, marketing representatives, and technically aware users will all find this book invaluable as it will help them to understand how the IMS works and the business model behind it.

**How to Pass OSCP Series: Windows Privilege Escalation Step-By-Step Guide** Alan Wang,2020-11-13 This book is the first of a series of How To Pass OSCP books and focus on

techniques used in Windows Privilege Escalation. This is a step-by-step guide that walks you through the whole process of how to escalate privilege in Windows environment using many common techniques. We start by gathering as much information about the target as possible either manually or using automated scripts. Next, we search for misconfigured services or scheduled tasks, insufficient file permission on binaries or services, vulnerable kernel, vulnerable software running with high privileges, sensitive information stored on local files, credential saved in the memory, registry settings that always elevate privileges before executing a binary, hard-coded credential contained in the application configuration files, and many more.

**Adventures with the Gods** Catharine F. Sellew, Catharine Sellew Hinchman, 1945 A retelling of sixteen myths of ancient Greece, including those of Prometheus, Hercules, Pandora, Phaeton, Proserpina, and Perseus.

**Where Wizards Stay Up Late** Matthew Lyon, Katie Hafner, 1999-08-19 Twenty five years ago, it didn't exist. Today, twenty million people worldwide are surfing the Net. Where Wizards Stay Up Late is the exciting story of the pioneers responsible for creating the most talked about, most influential, and most far-reaching communications breakthrough since the invention of the telephone. In the 1960's,

when computers were regarded as mere giant calculators, J.C.R. Licklider at MIT saw them as the ultimate communications devices. With Defense Department funds, he and a band of visionary computer whizzes began work on a nationwide, interlocking network of computers. Taking readers behind the scenes, *Where Wizards Stay Up Late* captures the hard work, genius, and happy accidents of their daring, stunningly successful venture.

**The Strange Hours Travelers Keep** August Kleinzahler, 2014-09-09 Those aren't stars, darling That's your nervous system Nanna didn't take you to planetariums like this --from *Hyper-Berceive: 3 A.M.* August Kleinzahler's new poems stretch and go places he has never gone before: they have his signature high color and rhythmic jump, but they take on a breadth of voice and achieve registers that his earlier work only hinted at. Ranging from Vegas and Mayfair to the Asian steppes and contemporary Berlin, these poems touch down at will in tableaux where Liberace unceremoniously meets with St. Kevin and Attila with Zsa Zsa Gabor. Surprise after surprise, nothing seems to lie outside Kleinzahler's purview. This is the strongest collection to date from a poet with the vision and

confident skill to make American poetry new (Clive Wilmer, The Times [London]).

The GNU Make Book John Graham-Cumming,2015 Covers GNU Make basics through advanced topics, including: user-defined functions, macros, and path handling; creating makefile assertions and debugging makefiles; parallelization; automatic dependency generation, rebuilding targets, and non-recursive Make; and using the GNU Make Standard Library--

Solar Water Pumping Robert Foster,Alma Cota,2018-07-07 Pumping water is a universal need and a major energy challenge, especially where electrical service is absent, expensive or unreliable. Water demands are greatest when the sun shines most intensely. Could there be a better power source for pumping, than the sunshine itself? Over a million solar pumps are already in use for irrigation, livestock, pond and stream management, water treatment, homes and communities, emergency relief, government and recreational facilities, and more. They are rapidly replacing hand pumps, engines, windmills, and even public grid power. To succeed, designers, suppliers, funders and owners need to understand the unique aspects of this technology. This comprehensive and unique

volume fills a major gap in the literature on this rapidly-growing industry. Three pioneering authors share over 80 years of combined solar pumping experience in private, public and educational sectors. They describe the theory and practice of solar pumping, including small, medium and large scale approaches, for the developing and the developed world. The book covers solar power, pump and control technologies, system sizing and design, storage and back-up, installation, operation and maintenance, and remote connectivity. It presents accessibility solutions for small farms and villages, as well as advice for involving communities, business, NGOs and financial institutions, based on the diverse experience of the authors. Examples with full colour illustrations and photos are included throughout. Real world case studies are presented from around the world, including Africa, Asia and the US, plus a ten-year follow-up study of more than 200 systems in Mexico. Overall, the volume will serve as a standard reference for years to come.

**Transitions to parenthood in Europe** Ann Nilsen, Julia Brannen, Suzan Lewis, 2013 *Transitions to Parenthood in Europe* analyzes and compares the biographies of mothers and fathers in seven

European countries. Focusing on how working people negotiate the transition into parenthood—and the work-life balances it requires—the contributors provide an in-depth understanding of working parents' real lives within a diverse set of national, workplace, and family contexts. With rich insights into how institutional policy and practices affect individuals and families, it highlights pertinent and sometimes challenging issues regarding the sustainability of contemporary lifestyles as people try to create a healthy, supportive home.

Heart-life in Song Frances Harrison Marr, 1883

XXXXX Xxxxx, Martin Howse, 2006 xxxxx proposes a radical, new space for artistic exploration, with essential contributions from a diverse range of artists, theorists, and scientists. Combining intense background material, code listings, screenshots, new translation, [the] xxxxx [reader] functions as both guide and manifesto for a thought movement which is radically opposed to entropic contemporary economies. xxxxx traces a clear line across eccentric and wide ranging texts under the rubric of life coding which can well be contrasted with the death drive of cynical economy with roots in rationalism

and enlightenment thought. Such philosophy, world as machine, informs its own deadly flipside embedded within language and technology. xxxxx totally unpicks this hiroshimic engraving, offering an dandyish alternative by way of deep examination of software and substance. Life coding is primarily active, subsuming deprecated psychogeography in favour of acute wonderland technology, wary of any assumed transparency. Texts such as Endonomadology, a text from celebrated biochemist and chaos theory pioneer Otto E. Roessler, who features heavily throughout this intense volume, make plain the sadistic nature and active legacy of rationalist thought. At the same time, through the science of endophysics, a physics from the inside elaborated here, a delicate theory of the world as interface is proposed. xxxxx is very much concerned with the joyful elaboration of a new real; software-led propositions which are active and constructive in eviscerating contemporary economic culture. xxxxx embeds Perl Routines to Manipulate London, by way of software artist and Mongrel Graham Harwood, a Universal Dovetailer in the Lisp language from AI researcher Bruno Marchal rewriting the universe as code, and self explanatory Pornographic Coding from plagiarist and author Stewart Home and code art

guru Florian Cramer. Software is treated as magical, electromystical, contrasting with the tedious GUI desktop applications and user-led drudgery expressed within a vast ghost-authored literature which merely serves to rehearse again and again the demands of industry and economy. Key texts, which well explain the magic and sheer art of programming for the absolute beginner are published here. Software subjugation is made plain within the very title of media theorist Friedrich Kittler's essay Protected Mode, published in this volume. Media, technology and destruction are further elaborated across this work in texts such as War.pl, Media and Drugs in Pynchon's Second World War, again from Kittler, and Simon Ford's elegant take on J.G Ballard's crashed cars exhibition of 1970, A Psychopathic Hymn. Software and its expansion stand in obvious relation to language. Attacking transparency means examining the prison cell or virus of language; life coding as William Burrough's cutup. And perhaps the most substantial and thorough-going examination is put forward by daring Vienna actionist Oswald Wiener in his Notes on the Concept of the Bio-adaptor which has been thankfully unearthed here. Equally, Olga Goriunova's extensive examination of a new Russian literary

trend, the online male literature of [udaff.com](http://udaff.com) provides both a reexamination of culture and language, and an example of the diversity of xxxxx; a diversity well reflected in background texts ranging across subjects such as Leibniz' monadology, the ur-crash of supreme flaneur Thomas de Quincey and several rewritings of the forensic model of Jack the Ripper thanks to Stewart Home and Martin Howse. xxxxx liberates software from the machinic, and questions the transparency of language, proposing a new world view, a sheer electromysticism which is well explained with reference to the works of Thomas Pynchon in Friedrich Kittler's essay, translated for the first time into English, which closes xxxxx. Further contributors include Hal Abelson, Leif Elggren, Jonathan Kemp, Aymeric Mansoux, and [socialfiction.org](http://socialfiction.org).

Mall Maker M. Jeffrey Hardwick, 2015-08-18 The shopping mall is both the most visible and the most contentious symbol of American prosperity. Despite their convenience, malls are routinely criticized for representing much that is wrong in America—sprawl, conspicuous consumption, the loss of regional character, and the decline of Mom and Pop stores. So ubiquitous are malls that most people

would be surprised to learn that they are the brainchild of a single person, architect Victor Gruen. An immigrant from Austria who fled the Nazis in 1938, Gruen based his idea for the mall on an idealized America: the dream of concentrated shops that would benefit the businessperson as well as the consumer and that would foster a sense of shared community. Modernist Philip Johnson applauded Gruen for creating a true civic art and architecture that enriched Americans' daily lives, and for decades he received praise from luminaries such as Lewis Mumford, Winthrop Rockefeller, and Lady Bird Johnson. Yet, in the end, Gruen returned to Europe, thoroughly disillusioned with his American dream. In *Mall Maker*, the first biography of this visionary spirit, M. Jeffrey Hardwick relates Gruen's successes and failures—his work at the 1939 World's Fair, his makeover of New York's Fifth Avenue boutiques, his rejected plans for reworking entire communities, such as Fort Worth, Texas, and his crowning achievement, the enclosed shopping mall. Throughout Hardwick illuminates the dramatic shifts in American culture during the mid-twentieth century, notably the rise of suburbia and automobiles, the death of downtown, and the effect these changes had on American life. Gruen

championed the redesign of suburbs and cities through giant shopping malls, earnestly believing that he was promoting an American ideal, the ability to build a community. Yet, as malls began covering the landscape and downtowns became more depressed, Gruen became painfully aware that his dream of overcoming social problems through architecture and commerce was slipping away. By the tumultuous year of 1968, it had disappeared. Victor Gruen made America depend upon its shopping malls. While they did not provide an invigorated sense of community as he had hoped, they are enduring monuments to the lure of consumer culture.

Samuel Mockbee and the Rural Studio Samuel Mockbee, 2003 The architect and teacher Samuel Mockbee, founder of Auburn University's Rural Studio, was an idealist who put into action one of the boldest programs in contemporary architecture. Mockbee led his students in the design and construction of homes, community centers and other essential structures in Hale County, Alabama--one of the poorest counties in the United States. Mockbee believed that architecture could play a determining role in combating the brutalities of poverty. He inspired students to create vanguard

designs and utilize an array of innovative, cost-effective building materials that included scraps of carpet baled into rectangular building blocks. This combination of ingenuity and enterprise informed the unique character of Mockbee's undertaking. Samuel Mockbee and the Rural Studio appraises Mockbee's unique contribution, assessing how he believed that architecture, practiced as a community-oriented undertaking, could transform the social environment.
