Policing Democracy Mark Ungar, 2020-03-03 2011 Winner of the Charles H. Levine Memorial Book Prize of the International Political Science Association Latin America's crime rates are astonishing by any standard—the region's homicide rate is the world's highest. This crisis continually traps governments between the need for comprehensive reform and the public demand for immediate action, usually meaning iron-fisted police tactics harking back to the repressive pre-1980s dictatorships. In *Policing Democracy*, Mark Ungar situates Latin America at a crossroads between its longstanding form of reactive policing and a problem-oriented approach based on prevention and citizen participation. Drawing on extensive case studies from Argentina, Bolivia, and Honduras, he reviews the full spectrum of areas needing reform: criminal law, policing, investigation, trial practices, and incarceration. Finally, *Policing Democracy* probes democratic politics, power relations, and regional disparities of security and reform to establish a framework for understanding the crisis and moving beyond it.

Rapid Application Development with Mozilla Nigel McFarlane, 2004 Rapid Application Development with Mozilla, part of the Bruce Perens Open Source Series, is a concise guide for any programmer who wants to learn the versatility and compatibility of Mozilla, an open source toolset with over a thousand objects and components. An additional feature of *Rapid Application Development with Mozilla* is the NoteTaker Web browser add-on—a sample Mozilla application that is developed throughout the book. Written by Web and XML expert Nigel McFarlane, this book is the perfect addition to the library of any user-interface software engineer, cross-platform developer, or any programmer looking to discover the benefits of rapid application development.

The One to Watch Bruce Girard, 2003 The combination of the new information and communication technologies (ICTs) and radio is opening up a range of possibilities for communication in the developing world. Broadcasters who used to have to travel for hours to find a public library to research a programme, now have instant access to the internet, whilst national, regional and global radio news agencies are making world news and alternative perspectives available to even the most remote communities. These developments are also helping to keep communities together, despite the distances imposed by migration trends. The case studies in this book demonstrate the value of converging radio and new ITCs for development and suggest that radio will have even greater significance and value in the future. The book is based on the findings of a FAO international workshop, held in February 2001.

Implementing CIFS Christopher R. Hertel, 2004 The book that Microsoft should have written, but didn't. --Jeremy Allison, Samba Team Your detailed explanations are clear and backed-up with source code--and the numerous bits of humor make a dry subject very enjoyable to read. --J.D. Lindemann, network engineer, Adaptec, Inc. The first developer's guide to Microsoft(R)'s Internet/Intranet file sharing standard For years, developers and administrators have struggled to understand CIFS, Microsoft's poorly documented standard for Internet file sharing. Finally, there is an authoritative, cross-platform guide to CIFS capabilities and behavior. Implementing CIFS not only delivers the priceless knowledge of a Samba Team member dedicated to investigating the inner workings of CIFS, it also identifies and describes crucial specifications and supporting documents. Provides essential information for designing and debugging large Windows(R) and/or Samba networks Offers clear, in-depth introductions to Server Message Block (SMB), NetBIOS over TCP/IP (NBT), browser services, and authentication Drills down into the internals of CIFS, exposing its behavior on the wire and at the desktop--and its strange quirks Presents illustrative code examples throughout Reflects years of work reviewing obscure documentation, packet traces, and sourcecode Includes the SNIA CIFS Technical Reference Implementing CIFS will be indispensable to every developer who wants to provide CIFS compatibility--and every administrator or security specialist who needs an in-depth understanding of how it really works.

GMPLS Adrian Farrel, Igor Bryskin, 2005-12-20 The last two years have seen significant developments in the standardization of GMPLS and its implementation in optical and other networks. GMPLS: Architecture and Applications brings you completely up to date, providing the practical information you need to put the growing set of GMPLS-supported services to work and manage them effectively. This book begins by defining GMPLS's place in a transport network, leveraging your knowledge of MPLS to give you an understanding of this radically new control plane technology. An overview of GMPLS protocols follows, but the real focus is on what comes afterwards: in-depth examinations of the architectures underpinning GMPLS in real-world network environments and current and emerging GMPLS applications. This one-of-a-kind resource delivers immensely useful information for software architects, designers and programmers, hardware developers, system testers, and network operators--and also for managers and other decision-makers. Written by two industry researchers at the forefront of the development of GMPLS. Provides a practical look at GMPLS protocols for signaling, routing, link and resource management, and traffic engineering. Delves deep into the world of GMPLS applications, including traffic engineering, path computation, layer one VPNs, point-to-multipoint connectivity, service management, and resource protection. Explores three distinct GMPLS control plane architectures: peer, overlay, and hybrid, and explains the GMPLS UNI and NNIs. Explains how provisioning challenges can be met in multi-region networks and details the provisioning systems and tools relied on by the GMPLS control plane, along with the standard MIB modules used to manage a GMPLS system.

China's Information Revolution Christine Zhen-Wei Qiang, 2007-05-04 Since 1997, China has devoted considerable resources to information and

communications technology (ICT) development. China has the world's largest telecommunications market, and its information technology industry has been an engine of economic growth growing two to three times faster than GDP over the past 10 years. E-government initiatives have achieved significant results, and the private sector has increasingly used ICT for production and service processes, internal management, and online transactions. The approaching 10-year mark provides an excellent opportunity to update the policy to reflect the evolving needs of China's economy. These needs include the challenges posed by industrialization, urbanization, upgraded consumption, and social mobility. Developing a more effective ICT strategy will help China to achieve its economic and social goals. Addressing all the critical factors is complex and requires long-term commitment. This book highlights several key issues that need to be addressed decisively in the second half of this decade, through policies entailing institutional reform, to trigger broader changes. This book is the result of 10 months of strategic research by a World Bank team at the request of China's State Council Informatization Office and the Advisory Committee for State Informatization. Drawing on background papers by Chinese researchers, the study provides a variety of domestic perspectives and local case studies and combines these perspectives with international experiences on how similar issues may have been addressed in other countries.

Competition in Telecommunications Jean-Jacques Laffont, Jean Tirole, 2001 The authors analyze regulatory reform and the emergence of competition in network industries using the state-of-the-art theoretical tools of industrial organization, political economy, and the economics of incentives.

web instruction solving exponential equations without logarithms this lecture uses a four step process to solve exponential equations 1 isolate the base 2 write both sides of the equation as exponential expressions with like bases 3 set the exponents equal to each other 4 solve for the unknown

4 7 exponential and logarithmic equations mathematics - Nov 06 2022

web we have already seen that every logarithmic equation $\log_b x = y$ is equivalent to the exponential equation $b^y = x$ we can use this fact along with the rules of logarithms to solve logarithmic equations where the argument is an algebraic expression for example consider the equation $\log_2 2 \log_2 3x = 5$

web if our equation has two logarithms we can
use a property that says that if $\log_a m = \log_a n$
then it is true that $m = n$ this is the one to one
property of logarithmic equations one to one
property of logarithmic equations for $m > 0$ $n > 0$ $a > 0$
and $a \neq 1$ is any real number if $\log_a m = \log_a n$ then $m = n$

some exponential equations and we have one

right over here we have 26 to the $9x$ plus five
power equals one so pause the video and see if
you can tell me what x is going to be well the
key here is to realize that 26 to the zeroth
power to the zeroth power is equal to one

lies in logarithms let's take a closer look by
working through some examples solving
exponential equations of the form $a \cdot b^x = d$ let's
solve $5 \cdot 2^x = 240$ to solve for x we must first
isolate the exponential part to do this divide
both sides by 5 as shown below
