Time-Sensitive Remote Sensing Christopher D. Lippitt,Douglas A. Stow,Lloyd L. Coulter,2015-06-02 This book documents the state of the art in the use of remote sensing to address time-sensitive information requirements. Specifically, it brings together a group of authors who are both researchers and practitioners, who work toward or are currently using remote sensing to address time-sensitive information requirements with the goal of advancing the effective use of remote sensing to supply time-sensitive information. The book addresses the theoretical implications of time-sensitivity on the remote sensing process, assessments or descriptions of methods for expediting the delivery and improving the quality of information derived from remote sensing, and describes and analyzes time-sensitive remote sensing applications, with an emphasis on lessons learned. This book is intended for remote sensing scientists, practitioners (e.g., emergency responders or administrators of emergency response agencies), and students, but will also be of use to those seeking to understand the potential of remote sensing to address a range of pressing issues, particularly natural and anthropogenic hazard response.

Metasploit David Kennedy,Jim O'Gorman,Devon Kearns,Mati Aharoni,2011-07-15 The Metasploit Framework makes discovering, exploiting, and sharing vulnerabilities quick and relatively painless. But while Metasploit is used by security professionals everywhere, the tool can be hard to grasp for first-time users. Metasploit: The Penetration Tester's Guide fills this gap by teaching you how to harness the Framework and interact with the vibrant community of Metasploit contributors. Once you've built your foundation for penetration testing, you'll learn the Framework's conventions, interfaces, and module system as you launch simulated attacks. You'll move on to advanced penetration testing techniques, including network reconnaissance and enumeration, client-side attacks, wireless attacks, and targeted social-engineering attacks. Learn how to: —Find and exploit unmaintained, misconfigured, and unpatched systems —Perform reconnaissance and find valuable information about your target —Bypass anti-virus technologies and circumvent security controls —Integrate Nmap, NeXpose, and Nessus with Metasploit to automate discovery —Use the Meterpreter shell to launch further attacks from inside the network —Harness standalone Metasploit utilities, third-party tools, and plug-ins —Learn how to write your own Meterpreter post exploitation modules and scripts You'll even touch on exploit discovery for zero-day research, write a fuzzer, port existing exploits into the Framework, and learn how to cover your tracks. Whether your goal is to secure your own networks or to put someone else's to the test, Metasploit: The Penetration Tester's Guide will take you there and beyond.

Preparing for Life in a Digital Age Julian Fraillon,John Ainley,Wolfram Schulz,Tim Friedman,Eveline Gebhardt,2014-12-13 Ability to use information and communication technologies (ICT) is an imperative for effective participation in today's digital age. Schools worldwide are responding to the need to provide young people with that ability. But how effective are they in this regard? The IEA International Computer and Information Literacy Study (ICILS) responded to this question by studying the extent to which young people have developed computer and information literacy (CIL), which is defined as the ability to use computers to investigate, create and communicate with others at home, school, the workplace and in society. The study was conducted under the auspices of the International Association for the Evaluation of Educational Achievement (IEA) and builds on a series of earlier IEA studies focusing on ICT in education. Data were gathered from almost 60,000 Grade 8 students in more than 3,300 schools from 21 education systems. This information was augmented by data from almost 35,000 teachers in those schools and by contextual data collected from school ICT-coordinators, school principals and the ICILS national research centers. The IEA ICILS team systematically investigated differences among the participating countries in students' CIL outcomes, how participating countries were providing CIL-related education and how confident teachers were in using ICT in their pedagogical practice. The team also explored differences within and across countries with respect to relationships between CIL education outcomes and student characteristics and school contexts. In general, the study findings presented in this international report challenge the notion of young people as "digital natives" with a self-developed capacity to use digital technology. The large variations in CIL proficiency within and across the ICILS countries suggest it is naive to expect young people to develop CIL in the absence of coherent learning programs. Findings also indicate that system- and school-level planning needs to focus on increasing teacher expertise in using ICT for pedagogical purposes if such programs are to have the desired effect. The report furthermore presents an empirically derived scale and description of CIL learning that educational stakeholders can reference when deliberating about CIL education and use to monitor change in CIL over time.

Legislating the War on Terror Benjamin Wittes,2010-02-01 The events of September 11 and subsequent American actions irrevocably changed the political, military, and legal landscapes of U.S. national security. Predictably, many of the changes were controversial, and abuses were revealed. The United States needs a legal framework that reflects these new realities. Legislating the War on Terror presents an agenda for reforming the statutory law governing this new battle, balancing the need for security, the rule of law, and the constitutional rights that protect American freedom. The authors span a considerable swath of the political spectrum, but they all believe that Congress has a significant role to play in shaping the contours of America's confrontation with terrorism. Their essays are organized around the major tools that the United States has deployed against al Qaeda as well as the legal problems that have arisen as a result. • Mark Gitenstein compares U.S. and foreign legal standards for detention, interrogation, and surveillance. • Matthew Waxman studies possible strategic purposes for detaining people without charging them, while Jack Goldsmith imagines a system of judicially reviewed law-of-war detention. • Robert Chesney suggests ways to refine U.S. criminal law into a more powerful instrument against terrorism. • Robert Litt and Wells C. Bennett suggest the creation of a specialized bar of defense lawyers for trying accused terrorists in criminal courts. • David Martin explores the relationship between immigration law and counterterrorism. • David Kris lays out his proposals for modernizing the Foreign Intelligence Surveillance Act. • Justin Florence and Matthew Gerke outline possible reforms of civil justice procedures in national security litigation. • Benjamin Wittes and Stuart Taylor Jr. investigate ways to improve interrogation laws while clarifying the definition and limits of torture. • Kenneth Anderson argues for the protection of targeted killing as a counterterrorism tool. How should Congress authorize, regulate, and limit counterterrorism tools, and under what circumstances should it permit and encourage their use? The authors of this book share a commitment to pushing a reluctant Congress to play a more active role than it has to date in writing the rules of the road.
