Crowning the Nice Girl Christine R. Yano, 2006-06-30 After World War II, Japanese Americans in Hawai'i sought to carve a positive niche of public citizenship in the community. In 1953 members of the Honolulu Japanese Junior Chamber of Commerce and their wives created a beauty contest, the Cherry Blossom Festival (CBF) Queen Pageant, which quickly became an annual spectacle for the growing urban population of Honolulu. *Crowning the Nice Girl* analyzes the pageant through its decades of development to the present within multiple frameworks of gender, class, and race/ethnicity. Drawing on extensive archival research; interviews with CBF queens, contestants, and organizers; and participant observation in the Fiftieth Annual Festival as a volunteer, Christine Yano paints a complex portrait of not only a beauty pageant, but also a community. The study begins with the subject of beauty pageants in general and Asian American beauty pageants in particular, interrogating the issues they raise, embedding them within their histories, and examining them as part of a global culture that has taken its model from the Miss America contest. Yano follows the pageant throughout the decades into the 1990s, adding corresponding herstories—extensive narratives drawn from interviews with CBF queens. She concludes by framing issues of race, ethnicity, spectacle, and community within the intertwined themes of niceness and banality.

The Promise of Early Childhood Development in Latin America and the Caribbean

Emiliana Vegas, Lucrecia Santib ez, 2009-12-03 Early childhood development outcomes play an important role throughout a person's life, affecting one's income-earning capacity and productivity, longevity, health, and cognitive ability. The deleterious effects of poor early childhood development outcomes can be long-lasting, affecting school attainment, employment, wages, criminality, and social integration of adults. The authors first take stock of early childhood development indicators in the region and explore access to early childhood development services for children of different backgrounds. They review recent evidence on the impact of early childhood development interventions in the region and investigate more deeply a selection of programs in Latin America and the Caribbean to distill lessons related to their design, implementation and institutionalization processes. The book concludes with a discussion of the challenges of scaling up and presents policy options to develop national early childhood development policies and programs that may be effective and sustained over time.

Assessment of Nontimber Forest Products in the United States Under Changing Conditions James L. Chamberlain, 2018-08-24 Nontimber forest products (NTFPs) are fundamental to the functioning of healthy forests and play vital roles in the cultures and economies of the people of the United States. However, these plants and fungi used for food, medicine, and other purposes have not been fully incorporated into management, policy, and resource valuation. This report is a forest-sectorwide assessment of the state of the knowledge regarding NTFPs science and management information for U.S. forests and rangelands (and hereafter referred to as the NTFP assessment). The NTFP assessment serves as a baseline science synthesis and provides information for managing nontimber forest resources in the United States. In addition, this NTFP assessment provides information for national-level reporting on natural capital and the ecosystem services NTFPs provide. The report also provides technical input to the 2017 National Climate Assessment (NCA) under development by the U.S. Global Change Research Program (USGCRP).

Financial Signal Processing and Machine Learning Ali N. Akansu, Sanjeev R. Kulkarni, Dmitry M. Malioutov, 2016-04-21 The modern financial industry has been required to deal with large and diverse portfolios in a variety of asset classes often with limited market data available. Financial Signal Processing and Machine Learning unifies a number of recent advances made in signal processing and machine learning for the design and management of investment portfolios and financial engineering. This book bridges the gap between these disciplines, offering the latest information on key topics including characterizing statistical dependence and correlation in high dimensions, constructing effective and robust risk measures, and their use in portfolio optimization and rebalancing. The book focuses on signal processing approaches to model return, momentum, and mean reversion, addressing theoretical and implementation aspects. It highlights the connections between portfolio theory, sparse learning and compressed sensing, sparse eigen-portfolios, robust optimization, non-Gaussian data-driven risk measures, graphical models, causal analysis through temporal-causal modeling, and large-scale copula-based approaches. Key features: Highlights signal processing and machine learning as key approaches to quantitative finance. Offers advanced mathematical tools for high-dimensional portfolio construction, monitoring, and post-trade analysis problems. Presents portfolio theory, sparse learning and compressed sensing, sparsity methods for investment portfolios. including eigen-portfolios, model return, momentum, mean reversion and non-Gaussian data-driven risk measures with real-world applications of these techniques. Includes contributions from leading researchers and practitioners in both the signal and information processing communities, and the quantitative finance community.

Enceladus and the Icy Moons of Saturn Paul M. Schenk, Roger N. Clark, Carly J. A.

Howett, Anne J. Verbiscer, J. Hunter Waite, 2018-11-27 With active geysers coating its surface with dazzlingly bright ice crystals, Saturn's large moon Enceladus is one of the most enigmatic worlds in our solar system. Underlying this activity are numerous further discoveries by the Cassini spacecraft, tantalizing us with evidence that Enceladus harbors a subsurface ocean of liquid water. Enceladus is thus newly realized as a forefront candidate among potentially habitable ocean worlds in our own solar system, although it is only one of a family of icy moons orbiting the giant ringed planet, each with its own story. As a new volume in the Space Science Series, *Enceladus and the Icy Moons of Saturn* brings together nearly eighty of the world's top experts writing more than twenty chapters to set the foundation for what we currently understand, while building the framework for the highest-priority questions to be addressed through ongoing spacecraft exploration. Topics include the physics and processes driving the geologic and geophysical phenomena of icy worlds, including, but not limited to, ring-moon interactions, interior melting due to tidal heating, ejection and reaccrusion of vapor and particulates, ice tectonics, and cryovolcanism. By contextualizing each topic within the profusion of puzzles beckoning from among Saturn's many dozen moons, *Enceladus and the Icy Moons of Saturn* synthesizes planetary processes on a broad scale to inform and propel both seasoned researchers and students toward achieving new advances in the coming decade and beyond.

Pioneers of Science Sir Oliver Lodge, 1893

When Scotland Was Jewish Elizabeth Caldwell Hirschman, Donald N. Yates, 2015-05-07 The popular image of Scotland is dominated by widely recognized elements of Celtic culture. But a significant non-Celtic influence on Scotland's history has been largely ignored for centuries? This book argues that much of Scotland's history and culture from 1100 forward is Jewish. The authors provide evidence that many of the national heroes, villains, rulers, nobles, traders, merchants, bishops, guild members, burgesses, and ministers of Scotland were of Jewish descent, their ancestors originating in France and Spain. Much of the traditional historical account of Scotland, it is proposed, rests on fundamental interpretive errors, perpetuated in order to affirm Scotland's identity as a Celtic, Christian society. A more accurate and profound understanding of Scottish history has thus been buried. The authors' wide-ranging research includes examination of census records, archaeological artifacts, castle carvings, cemetery inscriptions, religious seals, coinage, burgess and guild member rolls, noble genealogies, family crests, portraiture, and geographic place names.
