Researching Violence Against Women Mary Ellsberg, Lori Heise, 2005 Draws on the collective experiences and insights of many individuals, and in particular from the implementation of the WHO Multi-country Study on Women's Health and Domestic Violence against Women in over 10 countries. Twenty years ago, violence against women was not considered an issue worthy of international concern. Gradually, violence against women has come to be recognized as a legitimate human rights issue and as a significant threat to women's health and well-being. Now that international attention is focused on gender-based violence, methodologically rigorous research is needed to guide the formulation and implementation of effective interventions, policies, and prevention strategies. The manual has been developed in response to the growing need to improve the quality, quantity, and comparability of international data on physical and sexual abuse. It outlines some of the methodological and ethical challenges of conducting research on violence against women and describes a range of innovative techniques that have been used to address these challenges.

Computational Intelligence Applications in Modeling and Control Ahmad Taher Azar, Sundarapandian Vaidyanathan, 2014-12-26 The development of computational intelligence (CI) systems was inspired by observable and imitable aspects of intelligent activity of human being and nature. The essence of the systems based on computational intelligence is to process and interpret data of various nature so that that CI is strictly connected with the increase of

available data as well as capabilities of their processing, mutually supportive factors. Developed theories of computational intelligence were quickly applied in many fields of engineering, data analysis, forecasting, biomedicine and others. They are used in images and sounds processing and identifying, signals processing, multidimensional data visualization, steering of objects, analysis of lexicographic data, requesting systems in banking, diagnostic systems, expert systems and many other practical implementations. This book consists of 16 contributed chapters by subject experts who are specialized in the various topics addressed in this book. The special chapters have been brought out in the broad areas of Control Systems, Power Electronics, Computer Science, Information Technology, modeling and engineering applications. Special importance was given to chapters offering practical solutions and novel methods for the recent research problems in the main areas of this book, viz. Control Systems, Modeling, Computer Science, IT and engineering applications. This book will serve as a reference book for graduate students and researchers with a basic knowledge of control theory, computer science and soft-computing techniques. The resulting design procedures are emphasized using Matlab/Simulink software.

Violence Against Women Lori Heise, Jacqueline Pitanguy, Adrienne Germain, World Bank, 1994

American Women and Flight since 1940 Deborah G. Douglas, 2014-07-11 Women run wind tunnel experiments, direct air traffic, and fabricate airplanes.

American women have been involved with flight from the beginning, but until 1940, most people believed women could not fly, that Amelia Earhart was an exception to the rule. World War II changed everything. It is on the record that women can fly as well as men, stated General Henry H. Arnold, commanding general of the Army Air Forces. The question became Should women fly? Deborah G. Douglas tells the story of this ongoing debate and its impact on American history. From Jackie Cochran, whose perseverance led to the formation of the Women's Army Service Pilots (WASP) during World War II to the recent achievements of Jeannie Flynn, the Air Force's first woman fighter pilot and Eileen Collins, NASA's first woman shuttle commander, Douglas introduces a host of determined women who overcame prejudice and became military fliers, airline pilots, and air and space engineers. Not forgotten are stories of flight attendants, air traffic controllers, and mechanics. *American Women and Flight since 1940* is a revised and expanded edition of a Smithsonian National Air and Space Museum reference work. Long considered the single best reference work in the field, this new edition contains extensive new illustrations and a comprehensive bibliography.

Legal Issues in Global Contexts Kirk St. Amant,Martine Rife,2016-12-05

Today, it has been said, the world is flat, as online media allow information to move easily from point to point across the earth. International legal differences, however, are increasingly affecting the ease with which data and ideas can be shared across nations. Copyright law, for example, affects the international flow of materials by stipulating who has the right to replicate or to share certain kinds of content. Similarly, perspectives on privacy rights can differ from nation to nation and affect how personal information is shared globally. Moreover, national laws can affect the exchange of ideas by stipulating the language in which information must be presented in different geopolitical regions. Today's technical communicators need to

understand how legal factors can affect communication practices if they wish to work effectively in global contexts. This collection provides an overview of different legal aspects that technical communicators might encounter when creating materials or sharing information in international environments. Through addressing topics ranging from privacy rights and information exchange to the legalities of business practices in virtual worlds and perspectives on authorship and ownership, the contributors to this volume examine a variety of communication-based legal issues that can cause problems or miscommunication in international interactions. Reviewing such topics from different perspectives, the authors collectively provide ideas that could serve as a foundation for creating best practices on or for engaging in future research in the area of legal issues in international settings.

Electronic Evidence Stephen Mason, Daniel Seng, 2017-05 This fourth edition of the well-established practitioner text sets out what constitutes an electronic signature, the form an electronic signature can take, and discusses the issues relating to evidence - illustrated by analysis of relevant case law and legislation from a wide range of common law and civil law jurisdictions. Stephen Mason is a leading authority on electronic signatures and electronic evidence, having advised global corporations and governments on these topics. He is also the editor of *Electronic Evidence* and *International Electronic Evidence*, and he founded the international open-source journal *Digital Evidence* and *Electronic Signature Law Review* in 2004.

Irrationality Stuart Sutherland, 2007 Why do qualified professionals make wrong decisions that cause enormous harm to others? And why do you sit through a boring play just because the tickets were expensive? Drawing on a mass of intriguing research, Stuart Sutherland analyses the causes of irrationality, demonstrating that the trait is present in all of us.

Political Analysis Using R James E. Monogan III, 2015-12-14 This book provides a narrative of how R can be useful in the analysis of public administration, public policy, and political science data specifically, in addition to the social sciences more broadly. It can serve as a textbook and reference manual for students and independent researchers who wish to use R for the first time or broaden their skill set with the program. While the book uses data drawn from political science, public administration, and policy analyses, it is written so that students and researchers in other fields should find it accessible and useful as well. By the end of the first seven chapters, an entry-level user should be well acquainted with how to use R as a traditional econometric software program. The remaining four chapters will begin to introduce the user to advanced techniques that R offers but many other programs do not make available such as how to use contributed libraries or write programs in R. The book details how to perform nearly

every task routinely associated with statistical modeling: descriptive statistics, basic inferences, estimating common models, and conducting regression diagnostics. For the intermediate or advanced reader, the book aims to open up the wide array of sophisticated methods options that R makes freely available. It illustrates how user-created libraries can be installed and used in real data analysis, focusing on a handful of libraries that have been particularly prominent in political science. The last two chapters illustrate how the user can conduct linear algebra in R and create simple programs. A key point in these chapters will be that such actions are substantially easier in R than in many other programs, so advanced techniques are more accessible in R, which will appeal to scholars and policy researchers who already conduct extensive data analysis. Additionally, the book should draw the attention of students and teachers of quantitative methods in the political disciplines.

Sulfur Chemistry Xuefeng Jiang, 2019-08-28 The series Topics in Current Chemistry Collections presents critical reviews from the journal Topics in Current Chemistry organized in topical volumes. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience. Each review within the volume

critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data, but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field.

WDM Systems and Networks Neophytos (Neo) Antoniadou, Georgios Ellinas, Ioannis Roudas, 2011-12-08 Modeling, Simulation, Design and Engineering of WDM Systems and Networks provides readers with the basic skills, concepts, and design techniques used to begin design and engineering of optical communication systems and networks at various layers. The latest semi-analytical system simulation techniques are applied to optical WDM systems and networks, and a review of the various current areas of optical communications is presented. Simulation is mixed with experimental verification and engineering to present the industry as well as state-of-the-art research. This contributed volume is divided into three parts, accommodating different readers interested in various types of networks and applications. The first part of the book presents modeling approaches and simulation tools mainly for the physical layer including transmission effects, devices, subsystems, and systems), whereas the second part features

more engineering/design issues for various types of optical systems including ULH, access, and in-building systems. The third part of the book covers networking issues related to the design of provisioning and survivability algorithms for impairment-aware and multi-domain networks. Intended for professional scientists, company engineers, and university researchers, the text demonstrates the effectiveness of computer-aided design when it comes to network engineering and prototyping.

Arabia: The Cradle of Islam Samuel Marinus Zwemer, 2021-11-05 The author of this instructive volume is in the direct line of missionary pioneers to the Moslem world. Others have followed in their footsteps, until the Arabian Mission, the adopted child of the Reformed Church in America, is at present a compact and resolute group of men and women at the gates of Arabia, waiting on God's will, and intent first of all upon fulfilling in the spirit of obedience to the Master the duty assigned them.
