Nanotechnology Research Directions: IWGN Workshop Report R.S. Williams, P. Alivisatos, 2013-03-09 energy production, environmental management, transportation, communication, computation, and education. As the twenty-first century unfolds, nanotechnology's impact on the health, wealth, and security of the world's people is expected to be at least as significant as the combined influences in this century of antibiotics, the integrated circuit, and human-made polymers. Dr. Neal Lane, Advisor to the President for Science and Technology and former National Science Foundation (NSF) director, stated at a Congressional hearing in April 1998, If I were asked for an area of science and engineering that will most likely produce the breakthroughs of tomorrow, I would point to nanoscale science and engineering. Recognizing this potential, the White House Office of Science and Technology Policy (OSTP) and the Office of Management and Budget (OMB) have issued a joint memorandum to Federal agency heads that identifies nanotechnology as a research priority area for Federal investment in fiscal year 2001. This report charts Nanotechnology Research Directions, as developed by the Interagency Working Group on Nano Science, Engineering, and Technology (IWGN) of the National Science and Technology Council (NSTC). The report incorporates the views of leading experts from government, academia, and the private sector. It reflects the consensus reached at an IWGN-sponsored workshop held on January 27-29, 1999, and detailed in contributions submitted thereafter by members of the U. S. science and engineering community. (See Appendix A for a list of contributors.

Critical Transitions Chris M. Anson, Jessie L. Moore, 2017 In *Critical Transitions: Writing and the Question of Transfer*, Chris Anson and Jessie Moore offer an important new collection about prior learning and transfer theories that asks what writing knowledge should transfer, how we might recognize that transfer, and what the significance is--from a global perspective--of understanding knowledge transformation related to writing. The contributors examine strategies for supporting writers' transfer at key critical transitions, including transitions from high-school to college, from first-year writing to writing in the major and in the disciplines, between self-sponsored and academic

writing, and between languages. The collection concludes with an epilogue offering next steps in studying and designing for writing transfer. Contributors Linda Adler-Kassner, Chris M. The Cambridge Handbook of Compliance Benjamin van Rooij, D. Daniel Sokol, 2021-05-20 Compliance has become key to our contemporary markets, societies, and modes of governance across a variety of public and private domains. While this has stimulated a rich body of empirical and practical expertise on compliance, thus far, there has been no comprehensive understanding of what compliance is or how it influences various fields and sectors. The academic knowledge of compliance has remained siloed along different disciplinary domains, regulatory and legal spheres, and mechanisms and interventions. This handbook bridges these divides to provide the first one-stop overview of what compliance is, how we can best study it, and the core mechanisms that shape it. Written by leading experts, chapters offer perspectives from across law, regulatory studies, management science, criminology, economics, sociology, and psychology. This volume is the definitive and comprehensive account of compliance.

E-Business and Virtual Enterprises Luis M. Camarinha-Matos, Hamideh Afsarmanesh, Ricardo J. Rabelo, 2013-06-29 The fast progress in computer networks and their wide availability complemented with on one hand the explosion of the mobile computing and on the other hand the trends in the direction of ubiquitous computing, act as powerful enablers for new forms of highly dynamic collaborative organizations and emergence of new business practices. The first efforts in virtual enterprises (VE) were strongly constrained by the need to design and develop horizontal infrastructures aimed at supporting the basic collaboration needs of consortia of enterprises. Even pilot projects that were focused on specific business domains were forced to first develop some basic infrastructures before being able to develop their specific business models. Nowadays, although there is still a need to consolidate and standardize the horizontal infrastructures, the focus is more and more directed to the development of new vertical business models and the corresponding support tools. At the same time, in the earlier R&D projects, the attention was almost exclusively devoted to the operation phase of the VE life cycle, while now there are more activities addressing the creation phase, developing mechanisms to support the rapid formation of new virtual organizations for new business opportunities. In order to complete the life cycle, there is a need to also invest on support for VE dissolution.

Cyber Attacks and International Law on the Use of Force Samuli Haataja, 2019 Examining the thematic intersection of law, technology and violence, this book explores cyber attacks against states and current international law on the use of force. The theory of information ethics is used to critique the law's conception of violence and to develop an informational approach as an alternative way to think about cyber attacks. Cyber attacks against states constitute a new form of violence in the information age, and international law on the use of force is limited in its capacity to regulate them. This book draws on Luciano Floridi's theory of information ethics to critique the narrow conception of violence embodied in the law and to develop an alternative way to think about cyber attacks, violence, and the state. The author uses three case studies - the 2007 cyber attacks against Estonia, the Stuxnet incident involving Iran that was discovered in 2010, and the cyber attacks used as part of the Russian interference in the 2016 US presidential election - to demonstrate that an informational approach offers a means to reimagine the state as an entity and cyber attacks as a form of violence against it. This interdisciplinary approach will appeal to an international audience of scholars in international law, international relations, security studies, cyber security, and anyone interested in the issues surrounding emerging technologies.
