agriculture. Toward Sustainable Agricultural Systems in the 21st Century assesses the scientific evidence for the strengths and weaknesses of different production, marketing, and policy approaches for improving and reducing the costs and unintended consequences of agricultural production. It discusses the principles underlying farming systems and practices that could improve the sustainability. It also explores how those lessons learned could be applied to agriculture in different regional and international settings, with an emphasis on sub-Saharan Africa. By focusing on a systems approach to improving the sustainability of U.S. agriculture, this book can have a profound impact on the development and implementation of sustainable farming systems. Toward Sustainable Agricultural Systems in the 21st Century serves as a valuable resource for policy makers, farmers, experts in food production and agribusiness, and federal regulatory agencies.

Preserving the Desert Lary M. Dilsaver,2016 National parks are different from other federal lands in the United States. Beginning in 1872 with the establishment of Yellowstone, they were largely set aside to preserve for future generations the most spectacular and inspirational features of the country, seeking the best representative examples of major ecosystems such as Yosemite, geologic forms such as the Grand Canyon, archaeological sites such as Mesa Verde, and scenes of human events such as Gettysburg. But one type of habitat--the desert--fell short of that goal in American eyes until travel writers and the Automobile Age began to change that perception. As the Park Service began to explore the better-known Mojave and Colorado deserts of southern California during the 1920s for a possible desert park, many agency leaders still carried the same negative image of arid lands shared by many Americans--that they are hostile and largely useless. But one wealthy woman--Minerva Hamilton Hoyt, from Pasadena--came forward, believing in the value of the desert, and convinced President Franklin D. Roosevelt to establish a national monument that would protect the unique and iconic Joshua trees and other desert flora and fauna. Thus was Joshua Tree National Monument officially established in 1936, with the area later expanded in 1994 when it became Joshua Tree National Park. Since 1936, the National Park Service and a growing cadre of environmentalists and recreationalists have fought to block ongoing proposals from miners, ranchers, private landowners, and real estate developers who historically have refused to accept the idea that any desert is suitable for anything other than their consumptive activities. To their dismay, Joshua Tree National Park, even with its often-conflicting land uses, is more popular today than ever, serving more than one million visitors per year who find the desert to be a place worthy of respect and preservation. Opportunities to Improve Opioid Use Disorder and Infectious Disease Services National Academies of Sciences, Engineering, and Medicine,Health and Medicine Division,Board on Population Health and Public Health Practice,Committee on the Examination of the Integration of Opioid and Infectious Disease Prevention Efforts in Select Programs,2020-03-30 Opioid use and infectious diseases are intertwined epidemics. Despite the fact that the United States is more than two decades into the opioid crisis - the cause of tens of thousands of deaths every year on its own - the health system has not sufficiently addressed the morbidity and mortality of drug use coupled with infectious diseases. This is at least in part due to traditional models of substance use disorder care wherein substance use disorder treatment is delivered independently of other medical care, thereby inhibiting the delivery of comprehensive care. As a result, the United States is experiencing a drastic increase in infectious diseases that spread with drug use. Opportunities to Improve Opioid Use Disorder and Infectious Disease Services examines current efforts to integrate care and describes barriers, such as inadequate workforce and training; lack of data integration and sharing; and stigma among people who use drugs and have also been diagnosed with an infectious disease. The conclusions and recommendations of this report will help to promote patient-centered, integrated programs to address this dual epidemic.
