Made in Russia Carlos Whitlock Porter,2013-12-21 A stumbling block for Revisionists, just as it was for the post-war German defendants, is the seeming wealth of documents and testimony assembled by Allied prosecutors for the Nuremberg trials. The more than sixty volumes of trial material which appeared in the wake of the Trial of the Major War Criminals and twelve subsequent trials before the (American) Nuremberg Military Tribunal have for many years supplied a massive compilation of apparently damning evidence against Germany's National Socialist regime. Most Exterminationists, academic and lay, believe that Germany's aggression in beginning the war, and the numerous atrocities and war crimes laid to the German account, above all the alleged Holocaust of European Jewry, are amply documented in the so-called Nuremberg record.

Garden Revolution Larry Weaner,Thomas Christopher,2016-05-18 AHS Book Award winner This lushly-photographed reference is an important moment in horticulture that will be embraced by anyone looking for a better, smarter way to garden. Larry Weaner is an icon in the world of ecological landscape design, and now his revolutionary approach is available to all gardeners. Garden Revolution shows how an ecological approach to planting can lead to beautiful gardens that buck much of conventional gardening's counter-productive, time-consuming practices. Instead of picking the wrong plant and then constantly tilling, weeding, irrigating, and fertilizing, Weaner advocates for choosing plants that are adapted to the soil and climate of a specific site and letting them naturally evolve over time. Allowing the plants to find their own niches, to spread their seed around until they find the microclimate and spot that suits them

best, creates a landscape that is vibrant, dynamic, and gorgeous year after year.

Information and Communications for Development 2018 World Bank,2018-11-08 The Information and Communications for Development series looks in depth at how information and communications technologies are affecting economic growth in developing countries. This new report, the fourth in the series, examines the topic of data-driven development, or how better information makes for better policies. The objective is to assist developing-country firms and governments in unlocking the value of the data they hold for better service delivery and decision making and to empower individuals to take more control of their personal data. We are undoubtedly experiencing a data revolution in which our ability to generate, process, and utilize information has been magnified many times over by the machines that we increasingly rely upon. This report is about how the data revolution is changing the behavior of governments, individuals, and firms and how these changes affect the nature of development: economic, social, and cultural. How can governments extract value from data to improve service delivery in the same way that private companies have learned to do for profit? Is it feasible for individuals to take ownership of their own data and to use it to improve their livelihoods and quality of life? Can developing-country firms compete with the internet majors on their own turf and be even more innovative in their use of data to serve local customers better? Though the report is aimed primarily at government policy makers, it also has great relevance for individuals concerned about how their personal data is used and how the data revolution might affect their future job prospects. For private sector firms, particularly those in developing countries, the report suggests how they might expand their markets and improve their competitive edge. For development professionals, the report provides guidance on how they might use data more creatively to tackle long-standing global challenges, such as eliminating extreme poverty, promoting shared prosperity, or mitigating the effects of climate change. The report’s chapters explore different themes associated with the supply of data, the technology underlying it, and the demand for it. An overview chapter focuses on government use of data and presentation of definitions. Part I of the report then looks at the “supply side†? of the data sector, with chapters on data connectivity and capacity (where data comes from, how it is stored, and where it goes) and data technology (specifically big data analytics and artificial intelligence) and how this is contributing to development. Part II looks at the sector’s “demand side,†? with a chapter on people’s use of data and another that examines how firms use digital platforms in the data economy and how that contributes to competitiveness. Part III brings together the policy implications for developing-country stakeholders, with a chapter considering government policies for data, including data protection and privacy. A closing Data Notes appendix looks at statistical indicators associated with the use of data and presents the 2018 update of the Digital Adoption Index (DAI), a composite indicator introduced in the 2016 World Development Report: Digital Dividends.
