Tradition and Modernity. Changing the Images of Women in Selected Fiction by Manju Kapur and Anita Nair Sasikala Alagiri,2017-12

Along with a range of socio-cultural, political and economic concerns, the focus on 'self' has been an inevitable assertion of writers during the last quarter of the twentieth century. Individualistic in tone, the contemporary women novelists are trying to portray realistically the predicament of modern women torn between the forces of tradition and modernity, their sense of frustration and alienation, the emotional and psychological turmoil and complexities of man-women relationships and subtleties of feminine consciousness against the persistent patriarchal social set-up. Cognizant of the evils originating from patriarchy, a positive sense of feminine identity has been recognized by them and the result is the emergence of a new woman in Indian society and its concept in the Indian English novel which has assumed a strident posture in the contemporary writings by women. The shift from submission to assertion, acquiescence to resistance and obedience to rebellion, however, has not been abrupt and effortless. Women are still in the process of negotiation with different limiting factors and thresholds of patriarchy to claim their due space and affirm their identity. The present study is an attempt to critically investigate the negotiations with cultural norms by the women characters in the selected novels by the contemporary novelists, namely Manju Kapur and Anita Nair. Almost all the women characters, major and minor, from the selected novels have been considered and positioned as per their ideological leanings and convictions under two thematic chapters namely "Women in the Clutches of Traditional Norms," and "Tradition to Modernity." The major issues around which the novels move - education, marriage, gendered space and mother-daughter relationships - are taken up to put them within the contemporary social conditions in which women characters live. The present book is divided into five chapters to make a critical and analytical study of the select novels of these contemporary Indian women writers in English. The present work is focused on five selected novels: Manju Kapur's "Difficult Daughters", "Home" and "Custody" and Anita Nair's "Ladies Coupé" and "Mistress".

The Web Application Hacker's Handbook Dafydd Stuttard,Marcus Pinto,2011-03-16 This book is a practical guide to discovering and exploiting security flaws in web applications. The authors explain each category of vulnerability using real-world examples, screen shots and code extracts. The book is extremely practical in focus, and describes in detail the steps involved in detecting and exploiting each kind of security weakness found within a variety of applications such as online banking, e-commerce and other web applications. The topics covered include bypassing login mechanisms, injecting code, exploiting logic flaws and compromising other users. Because every web application is different, attacking them entails bringing to bear various general principles, techniques and experience in an imaginative way. The most successful hackers go beyond this, and find ways to automate their bespoke attacks. This handbook describes a proven methodology that combines the virtues of human intelligence and computerized brute force, often with devastating results. The authors are professional penetration testers who have been involved in web application security for nearly a decade. They have presented training courses at the Black Hat security conferences throughout the world. Under the alias PortSwigger, Dafydd developed the popular Burp Suite of web application hack tools.

The Science of Environmental Pollution Frank R. Spellman, 2021-06-17 This new edition of The Science of Environmental Pollution presents common-sense approaches and practical examples based on scientific principles, models, and observations, but keeps the text lively and understandable for scientists and non-scientists alike. It addresses the important questions regarding environmental pollution: What is it? What is its impact? What are the causes and how can we mitigate them? But more than this, it stimulates new ways to think about the issues and their possible solutions. Features: Updated throughout, and contains a new chapter on the effects of endocrine disruptors in the environment. Provides an introduction to air, soil, and water pollution sources and remediation. Addresses pressing issues such as global climate change, rising sea levels, polluted air, increased weather phenomena, and the state of potable water worldwide. Supplies a vital information source for policy-makers involved in decisions concerning environmental management. Includes case studies, examples, and study questions. The Science of Environmental Pollution is suitable for students taking undergraduate-level courses dealing with the environment and related pollution issues. Microcontroller Basics Burkhard Kainka,2005 Microcontrollers have become an indispensable part of modern electronics. They make things possible that vastly exceed what could be done previously. Innumerable applications show that almost nothing is impossible. There's thus every reason to learn more about them, but that raises the question of where to find a good introduction to this fascinating technology. The answer is easy: this *Microcontroller Basics* book, combined with the 89S8252 Flash Board project published by Elektor Electronics. However, this book offers more than just a basic introduction. It clearly explains the technology using various microcontroller circuits and programs written in several different programming languages. Three microcontrollers from the 8051 family are used in the sample applications, ranging from the simple 89C2051 to the AN2131, which is designed to support USB applications. The programming tools include assemblers, Basic-52 and BASCOM-51, and several C compilers. Every reader can thus find the programming environment most suitable to his or her needs. In the course of the book, the reader gradually develops increased competence in converting his or her ideas into microcontroller circuitry. All of the sample programs can be downloaded from the Elektor Electronics website. That has the added advantage that the latest versions are always available.
