**Identity Management Design Guide with IBM Tivoli Identity Manager** Axel Buecker,Dr. Werner Filip,Jaime Cordoba Palacios,Andy Parker,IBM Redbooks,2009-11-06 Identity management is

the concept of providing a unifying interface to manage all aspects related to individuals and their interactions with the business. It is the process that enables business initiatives by efficiently managing the user life cycle (including identity/resource provisioning for people (users)), and by integrating it into the required business processes. Identity management encompasses all the data and processes related to the representation of an individual involved in electronic transactions. This IBM® Redbooks® publication provides an approach for designing an identity management solution with IBM Tivoli® Identity Manager Version 5.1. Starting from the high-level, organizational viewpoint, we show how to define user registration and maintenance processes using the self-registration and self-care interfaces as well as the delegated administration capabilities. Using the integrated workflow, we automate the submission/approval processes for identity management requests, and with the automated user provisioning, we take workflow output and automatically implement the administrative requests on the environment with no administrative intervention. This book is a valuable resource for security administrators and architects who wish to understand and implement a centralized identity management and security infrastructure.

**Educational Research** L. R. Gay,Geoffrey E. Mills,Peter W. Airasian,2011 Students often fear the educational research course. Don't worry. This book is famous for its lack of jargon, for its clear and concrete explanations, and its light (often funny) tone. As you read the book, you will build skills that you need to read educational research and produce your own. The book will help guide you through each step in creating your own research report. You can compare your work with the example published research articles in every methods chapter. In addition, the new Digital Research Tools for the 21st Century feature introduces novel tools and methods you can use to make the process of doing research easier or more efficient like using speech recognition programs to save time transcribing interviews (Chapter 15), using flip cameras and Skype to collect qualitative data (Chapter 14), and using management programs to organize citations (Chapter 21).

The intrinsic functionality of SAP is not designed to completely handle all the tasks of a data center by itself, but the SAP system offers several interface possibilities to attach external tools to it to accomplish this task We explain SAP basic concepts and the issues with SAP data management. We introduce Tivoli® Storage Manager and all of its products that are related to SAP data management. We provide some comparison between database backup and recovery tools. We implement this setup on two separate SAP systems: one running DB2 and the other running Oracle® database. We also implement LAN-free backup and FlashCopy® scenarios. In the sample implementation section, we show many different tasks, such as backup and restore, database recovery, backup monitoring, and tuning. We also cover some advanced backup/availability considerations, such as split mirror backup and standby databases.
