Two Sides of a Barricade Christian Scholl, 2012-01-01 Two Sides of a Barricade argues that to construct global democracy, conflict and dissent must be taken seriously. Christian Scholl explores the political significance of the confrontations within four sites of interaction: bodies, space, communication, and law. Each site of struggle provides a different entry point to understand the influence of protester and police tactics on each other. At the same time, the four sites of struggle allow a comprehensive analysis of how the contestation of global hegemonic forces during summit protests trigger a preemptive shift in social control through increased deployment of biopolitical forms of power.

The Economics of Crime Rafael Di Tella, Sebastian Edwards, Ernesto Schargrodsky, 2010-08-02 Crime rates in Latin America are among the highest in the world, creating climates of fear and lawlessness in several countries. Despite this situation, there has been a lack of systematic effort to study crime in the region or the effectiveness of policies designed to tackle it. The Economics of Crime is a powerful corrective to this academic blind spot and makes an important contribution to the current debate on causes and solutions by applying lessons learned from recent developments in the economics of crime. The Economics of Crime addresses a variety of topics, including the impact of kidnappings on investment, mandatory arrest laws, education in prisons, and the relationship between poverty and crime. Utilizing research from within and without Latin America, this book illustrates the broad range of approaches that have been efficacious in studying crime in both developing and developed nations. The Economics of Crime is a vital text for researchers, policymakers, and students of both crime and of Latin American economic policy.

Overcriminalization Douglas Husak,2008-01-08 The United States today suffers from too much criminal law and too much punishment. Husak describes the phenomena in some detail and explores their relation, and why these trends produce massive injustice. His primary goal is to defend a set of constraints that limit the authority of states to enact and enforce penal offenses. The book urges the weight and relevance of this topic in the real world, and notes that most Anglo-American legal philosophers have neglected it. Husak's secondary goal is to situate this endeavor in criminal theory as traditionally construed. He argues that many of the resources to reduce the size and scope of the criminal law can be derived from within the criminal law itself-even though these resources have not been used explicitly for this purpose. Additional constraints emerge from a political view about the conditions under which important rights such as the right implicated by punishment-may be infringed. When conjoined, these constraints produce what Husak calls a minimalist theory of criminal liability. Husak applies these constraints to a handful of examples-most notably, to the justifiability of drug proscriptions.

Igapó (Black-water flooded forests) of the Amazon Basin Randall W. Myster,2018-10-22 Igapó forests are a common part of the Amazon whose ecosystems are critical to our shared human future. The text then breaks down the igapó ecosystem using these sections: (1) Igapó forests over space and time, (2) Water, light and soils, (3) The carbon cycle, (4) Litter, fungi and invertebrates, (5) Vertebrates, (6) Plant population studies, (7) Plant community studies, and (8) Human impacts and management. Natural Products Lixin Zhang,Arnold L. Demain,2007-11-17 A fresh examination of the past successes of natural products as medicines and their new future from both conventional and new technologies. High-performance liquid chromatography profiling, combinatorial synthesis, genomics, proteomics, DNA shuffling, bioinformatics, and genetic manipulation all now make it possible to rapidly evaluate the activities of extracts as well as purified components derived from microbes, plants, and marine organisms. The authors apply these methods to new natural product drug discoveries, to microbial diversity, to specific groups of products (Chinese herbal drugs, antitumor drugs from microbes and plants, terpenoids, and arsenic compounds), and to specific sources (the sea, rainforest, and endophytes). These new opportunities show how research and development trends in the pharmaceutical industry can advance to include both synthetic compounds and natural products, and how this paradigm shift can be more productive and efficacious.
