Newtown Alive Rosalyn Howard Ph D,2017-03-15 This book chronicles the history of Sarasota, Florida's African American community - Newtown - that celebrated its 100-year anniversary in 2014. It answers questions about many aspects of community life: why the earliest African Americans who came to Sarasota, then a tiny fishing village, first settled in areas near downtown called -Black Bottom- and -over town;- their transition from there to Newtown; how they developed Newtown from swampland into a self-contained community to ensure their own survival during the Jim Crow era; the ways they earned a living, what self-help organizations they formed; their religious and educational traditions; residents' military service, the strong emphasis placed on education; how they succeeded in gaining political representation after filing a federal lawsuit; and much more. Newtown residents fought for civil rights, endured and triumphed over Jim Crow segregation, suffered KKK intimidation and violence, and currently are resisting the stealthy gentrification of their community. Whether you are new to the area, a frequent visitor, an educator, historian or a longtime resident trying to connect the dots in your family tree, you will find these stories of courage, dignity and determination enlightening and empowering!

Drawing Futures Bob Sheil,Frédéric Migayrou,Luke Pearson,Laura Allen,2016-11-11 Drawing Futures brings together international designers and artists for speculations in contemporary drawing for art and architecture.Despite numerous developments in technological manufacture and computational design that provide new grounds for designers, the act of drawing still plays a central role as a vehicle for speculation. There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world. In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world, the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation. Drawing Futures will present a compendium of projects, writings and interviews that critically reassess the act of drawing and where its future may lie.Drawing Futures focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments. The book coincides with an international conference of the same name, taking place at The Bartlett School of Architecture, UCL, in November 2016. Bringing together practitioners from many creative fields, the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas.

The Cambridge Companion to Reformed Theology Paul T. Nimmo,David A. S.

Fergusson,2016-05-26 This Companion offers an introduction to Reformed theology, one of the most historically important, ecumenically active, and currently generative traditions of doctrinal enquiry, by way of reflecting upon its origins, its development, and its significance. The first part, Theological Topics, indicates the distinct array of doctrinal concerns which gives coherence over time to the identity of this tradition in all its diversity. The second part, Theological Figures, explores the life and work of a small number of theologians who have not only worked within this tradition, but have constructively shaped and inspired it in vital ways. The final part, Theological Contexts, considers the ways in which the resultant Reformed sensibilities in theology have had a marked impact both upon theological and ecclesiastical landscapes in different places and upon the wider societal landscapes of history. The result is a fascinating and compelling guide to this dynamic and vibrant theological tradition.

Reassembling Scholarly Communications Martin Paul Eve, Jonathan Gray, 2020-10-20 A range of perspectives on the complex political, philosophical, and pragmatic implications of opening research and scholarship through digital technologies. The Open Access Movement proposes to remove price and permission barriers for accessing peer-reviewed research work--to use the power of the internet to duplicate material at an infinitesimal cost-per-copy. In this volume, contributors show that open access does not exist in a technological vacuum; there are complex political, philosophical, and pragmatic implications for opening research through digital technologies. The contributors examine open access across spans of colonial legacies, knowledge frameworks, publics and politics, archives and digital preservation, infrastructures and platforms, and global communities.

Don't Fear the Spreadsheet Tyler Nash, Bill Jelen, Kevin Jones, Tom Urtis, 2012-07-01 Written in a question-and-answer format, this lowest-level beginner book covers the extreme basics of using spreadsheets in Excel. Instead of delving into advanced topics that scare most Excel novices away, the guide starts at a much more basic level, quickly providing a passable knowledge of the program and allowing users to overcome their fears and frustrations. It answers hundreds of common questions, including Can I delete data from a spreadsheet without changing the formatting? How can I merge two cells, columns, or rows? How do I use text-wrapping? How do I create custom functions? and What is a Macro and how do I go about creating it? Intended for the roughly 40 percent Excel users who have never even entered a formula, this book will demystify the problems and confusion that prevent them from using the program to its potential.

Constructing the Uzbek State Marlene Laruelle, 2017-12-20 Over the past three decades, Uzbekistan has attracted the attention of the academic and policy communities because of its geostrategic importance, its critical role in shaping or unshaping Central Asia as a region, its economic and trade potential, and its demographic weight: every other Central Asian being Uzbek, Uzbekistan's political, social, and cultural evolutions largely exemplify the transformations of the region as a whole. And yet, more than 25 years after the collapse of the Soviet Union, evaluating Uzbekistan's post-Soviet transformation remains complicated. Practitioners and scholars have seen access to sources, data, and fieldwork progressively restricted since the early 2000s. The death of President Islam Karimov, in power for a quarter of century, in late 2016, reopened the future of the country, offering it more room for evolution. To better grasp the challenges facing post-Karimov Uzbekistan, this volume reviews nearly three decades of independence. In the first part, it discusses the political construct of Uzbekistan under Karimov, based on the delineation between the state, the elite, and the people, and the tight links between politics and economy. The second section of the volume delves into the social and cultural changes related to labor migration and one specific trigger – the difficulties to reform

agriculture. The third part explores the place of religion in Uzbekistan, both at the state level and in society, while the last part looks at the renegotiation of collective identities.

The Early Mandolin James Tyler, Paul Sparks, 1992 The name mandolin was used to refer to two quite different instruments: the gut-stringed mandolino, played with the fingers, and the later metal-stringed Neapolitan mandoline, which was played with a plectrum. This is the first book devoted exclusively to these two early instruments about which information in reference books is scant and often erroneous. The authors uncover their rich and varied musical history, examining contemporary playing techniques and revealing the full extent of the instruments' individual repertoires, which include works by Vivaldi, Sammartini, Stamitz, and Beethoven. The book's ultimate aim is to help today's players to produce artistically satisfying performances through an understanding of the nature and historical playing style of these unjustly neglected instruments.
