Asian Transnational Security Challenges Caroline Ziemke-Dickens,Julian Droogan,2010 The Council for Asian transnational Threat Research (CATR) has its roots in the initial months following the September 11, 2001 terrorist attacks on New York and Washington. Although the United States initially received widespread global support for what the Bush administration called the global war on terror, over time, as the US war on terror expanded its reach beyond al-Qaida's safe haven in Taliban-controlled Afghanistan, allies and partners began to question some aspects of the US approach. Regional experts criticized the disproportionately military response to what they regarded as a threat with primarily political, social, and economic roots and the focus on religiously-motivated jihadists that overlooked other, largely secular, but no less dangerous, violent extremist movements. The regional view of the landscape of transnational threats in Asia extended well beyond al-Qaida, involving loose networks of violent groups that traded resources and know-how, but did not necessarily have a central leadership, common motivations, or a shared agenda. To understand and cope with this threat landscape would require a multilateral and nuanced approach, in which states across Asia could work in partnership with the United States to develop comprehensive responses to an increasingly complex threat environment.--DTIC abstract.

Evolutionary Computation for Dynamic Optimization Problems Shengxiang Yang,Xin Yao,2013-11-18 This book provides a compilation on the state-of-the-art and recent advances of evolutionary computation for dynamic optimization problems. The motivation for this book arises from the fact that many real-world optimization problems and engineering systems are subject to dynamic environments, where changes occur over time. Key issues for addressing dynamic optimization problems in evolutionary computation, including fundamentals, algorithm design, theoretical analysis, and real-world applications, are presented. Evolutionary Computation for Dynamic Optimization Problems is a valuable reference to scientists, researchers, professionals and students in the field of engineering and science, particularly in the areas of computational intelligence, nature- and bio-inspired computing, and evolutionary computation.

Treatise on Geophysics ,2007-10-31 The keys to the success of an enterprise such as the Treatise on Geophysics are the editors of the individual volumes and the authors who have contributed chapters. The editors are leaders in their fields of expertise, as distinguished a group of geophysicists as could be assembled on the planet. They know well the topics that had to be covered to achieve the breadth and depth required by the Treatise, and they know who were the best of their colleagues to write on each subject. The list of chapter authors is an impressive one, consisting of geophysicists who have made major contributions to their fields of study. The quality and coverage achieved by this group of editors and authors has insured that the Treatise will be the definitive major reference work and textbook in geophysics. Each volume of the Treatise begins with an Overview chapter by the volume editor. The Overviews provide the editors' perspectives of their fields, views of the past, present, and future. They also summarize the contents of their volumes and discuss important topics not addressed elsewhere in the chapters. The Overview chapters are excellent introductions to their volumes. The volumes of the Treatise are: Volume 1: Seismology and Structure of the Earth Volume 2: Mineral Physics Volume 3: Geodesy Volume 4: Earthquake Seismology Volume 5: Geomagnetism Volume 6: Crustal and Lithosphere Dynamics Volume 7: Mantle Dynamics Volume 8: Core Dynamics Volume 9: Evolution of the Earth Volume 10: Planets and Moons An eleventh volume of the Treatise provides a comprehensive index. Self-contained volumes start with an overview of the subject then explores each topic with in depth detail Extensive reference lists and cross references with other volumes to facilitate further research Full-color figures and tables support the text and aid in understanding Content suited for both the expert and non-expert

Life on Land Walter Leal Filho,Anabela Marisa Azul,Luciana Brandli,Amanda Lange Salvia,Tony Wall,2020-10-25 The problems related to the process of industrialisation such as biodiversity depletion, climate change and a worsening of health and living conditions, especially but not only in developing countries, intensify. Therefore, there is an increasing need to search for integrated solutions to make development more sustainable. The United Nations has acknowledged the problem and approved the “2030 Agenda for Sustainable Development”. On 1st January 2016, the 17 Sustainable Development Goals (SDGs) of the Agenda officially came into force. These goals cover the three dimensions of sustainable development: economic growth, social inclusion and environmental protection. The Encyclopedia of the UN Sustainable Development Goals comprehensively addresses the SDGs in an integrated way. It encompasses 17 volumes, each one devoted to one of the 17 SDGs. This volume addresses SDG 15, namely Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss and contains the description of a range of terms, which allow a better understanding and foster knowledge. Concretely, the defined targets are: Ensure the conservation, restoration and sustainable use of terrestrial and inland freshwater ecosystems and their services, in particular forests, wetlands, mountains and drylands, in line with obligations under international agreements Promote the implementation of sustainable management of all types of forests, halt deforestation, restore degraded forests and substantially increase afforestation and reforestation globally Combat desertification, restore degraded land and soil, including land affected by desertification, drought and floods, and strive to achieve a land degradation-neutral world Ensure the conservation of mountain ecosystems, including their biodiversity, in order to enhance their capacity to provide benefits that are essential for sustainable development Take urgent and significant action to reduce the degradation of natural habitats, halt the loss of biodiversity and protect and prevent the extinction of threatened species Promote fair and equitable sharing of the benefits arising from the utilization of genetic resources and promote appropriate access to such resources, as internationally agreed Take urgent action to end poaching and trafficking of protected species of flora and fauna and address both demand and supply of illegal wildlife products Introduce measures to prevent the introduction and significantly Reduce the impact of invasive alien species on land and water ecosystems and control or eradicate the priority species Integrate ecosystem and biodiversity values into national and local planning, development processes, poverty reduction strategies and accounts Mobilize and significantly increase financial resources from all sources to conserve and sustainably use biodiversity and

ecosystems Mobilize significant resources from all sources and at all levels to finance sustainable forest management and provide adequate incentives to developing countries to advance such management, including for conservation and reforestation Enhance global support for efforts to combat poaching and trafficking of protected species, including by increasing the capacity of local communities to pursue sustainable livelihood opportunities Editorial Board Alexandra Aragão, Desalegn Yayeh Ayal, Ayansina Ayanlade, Anabela Marisa Azul, Adriana Consorte-McCrea, Muhammad Farooq, Ana Catarina Luz, María P. Wood-Plastic Composites Anatole A. Klyosov,2007-08-31 A comprehensive, practical guide to wood-plastic composites and their properties This is the first book that presents an overview of the main principles underlying the composition of wood-plastic composite (WPC) materials and their performance in the real world. Focusing on the characteristics of WPC materials rather than their manufacture, this guide bridges the gap between laboratory-based research and testing and the properties WPC materials exhibit when they're used in decks, railing systems, fences, and other common applications. Complete with practical examples and case studies, this guide: Describes compositions of WPC materials, including thermoplastics, cellulose fiber, minerals, additives, and their properties Covers mechanical properties, microbial resistance, water absorption, flammability, slip resistance, thermal expansion-contraction, sensitivity to oxidation and solar radiation, and rheological properties of hot melts of WPC Covers subjects that determine esthetics, properties, performance, and durability of wood-plastic composite products Includes comparisons of different ASTM methods and procedures that apply to specific properties This is a comprehensive, hands-on reference for scientists, engineers, and researchers working with wood-plastic composites in plastics and polymers, materials science, microbiology, rheology, plastic technology, and chemical engineering, as well as an outstanding text for graduate students in these disciplines. It's also an excellent resource for suppliers and WPC manufacturers, and an accessible guide for developers, homebuilders, and landscape architects who want to know more about wood-plastic composites and their performance in the real world.

African Americans in Minnesota David Vassar Taylor,2009-06-26 While making up a smaller percentage of Minnesota's population compared to national averages, African Americans have had a profound influence on the history and culture of the state from its earliest days to the present. Author David Taylor chronicles the rich history of Blacks in the state through careful analysis of census and housing records, newspaper records, and first-person accounts. He recounts the triumphs and struggles of African Americans in Minnesota over the past 200 years in a clear and concise narrative. Major themes covered include settlement by Blacks during the territorial and early statehood periods; the development of urban Black communities in St. Paul, Minneapolis, and Duluth; Blacks in rural areas; the emergence of Black community organizations and leaders in the late-nineteenth and early-twentieth centuries; and Black communities in transition during the turbulent last half of the twentieth century. Taylor also introduces influential and notable African Americans: George Bonga, the first African American born in the region during the fur trade era; Harriet and Dred Scott, whose two-year residence at Fort Snelling in the 1830s later led to a famous, though unsuccessful, legal challenge to the institution of slavery; John Quincy Adams, publisher of the state's first Black newspaper; Fredrick L. McGhee, the state's first Black lawyer; community leaders, politicians, and civil servants including James Griffin, Sharon Sayles Belton, Alan Page, Jean Harris, and Dr. Richard Green; and nationally influential artists including August Wilson, Lou Bellamy, Prince, Jimmy Jam, and Terry Lewis. African Americans in Minnesota is the fourth book in The People of Minnesota, a new series dedicated to telling the history of the state through the stories of its ethnic groups in accessible and illustrated paperbacks.

The Hollow Earth Rudy Rucker,2017-08-15 In 1836, Mason Algiers Reynolds leaves his family's Virginia farm with his father's slave, a dog, and a mule. Branded a murderer, he finds sanctuary with his hero, Edgar Allan Poe, and together they embark on an extraordinary expedition to the South Pole, and the entrance to the Hollow Earth. It is there, at the center of the world, where strange physics, strange people, and stranger creatures abound, that their bizarre adventures truly begin.Rudolf von Bitter Rucker is an American mathematician, computer scientist, science fiction author, and philosopher, and is one of the founders of the cyberpunk literary movement. The author of both fiction and non-fiction, he is best known for the novels in the Ware Tetralogy, the first two of which (Software and Wetware) both won Philip K. Dick Awards.As his own alternative to cyberpunk, Rucker developed a writing style he terms: Transrealism, as outlined in his 1983 essay The Transrealist Manifesto, is science fiction based on the author's own life and immediate perceptions, mixed with fantastic elements that symbolize psychological change. Many of Rucker's novels and short stories apply these ideas.Rucker often uses his novels to explore scientific or mathematical ideas; White Light examines the concept of infinity, while the Ware Tetralogy (written from 1982 through 2000) is in part an explanation of the use of natural selection to develop software (a subject also developed in his The Hacker and the Ants. His novels also put forward a mystical philosophy that Rucker has summarized in an essay titled, with only a bit of irony, The Central Teachings of Mysticism.
