Transforming the Workforce for Children Birth Through Age 8 National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on the Science of Children Birth to Age 8: Deepening and Broadening the Foundation for Success, 2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

**Environmental Modelling** John Wainwright, Mark Mulligan, 2013-01-22 Simulation models are an established method used to investigate processes and solve practical problems in a wide variety of disciplines. Central to the concept of this second edition is the idea that environmental systems are complex, open systems. The authors present the diversity of approaches to dealing with environmental complexity and then encourage readers to make comparisons between these approaches and between different disciplines. Environmental Modelling: Finding Simplicity in Complexity 2nd edition is divided into four main sections: An overview of methods and approaches to modelling. State of the art for modelling environmental processes Tools used and models for management Current and future developments. The second edition evolves from the first by providing additional emphasis and material for those students wishing to specialize in environmental modelling. This edition: Focuses on simplifying complex environmental systems. Reviews current software, tools and techniques for modelling. Gives practical examples from a wide variety of disciplines, e.g. climatology, ecology, hydrology, geomorphology and engineering. Has an associated website containing colour images, links to WWW resources and chapter support pages, including data sets relating to case studies, exercises and model animations. This book is suitable for final year undergraduates and postgraduates in environmental modelling, environmental science, civil engineering and biology who will already be familiar with the subject and are moving on to specialize in the field. It is also designed to appeal to professionals interested in the environmental sciences, including environmental consultants, government employees, civil engineers, geographers, ecologists, meteorologists, and geochemists.

**Making Eye Health a Population Health Imperative** National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Public Health Approaches to Reduce Vision Impairment and Promote Eye Health, 2017-01-15 The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. Making Eye Health a Population Health Imperative: Vision for Tomorrow proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.

The Urge Carl Erik Fisher, 2022-01-25 Named a Best Book of the Year by The New Yorker and The Boston Globe An authoritative, illuminating, and deeply humane history of addiction—a phenomenon that remains baffling and deeply misunderstood despite having touched countless lives—by an addiction psychiatrist striving to understand his own family and himself “Carl Erik Fisher’s The Urge is the best-written and most incisive book I’ve read on the history of addiction. In the midst of an overdose crisis that grows worse by the hour and has vexed America for centuries, Fisher has given us the best prescription of all: understanding. He seamlessly blends a gripping historical narrative with memoir that doesn’t self-aggrandize; the result is a full-throated argument against blaming people with substance use disorder. The Urge is a propulsive tour de force that is as healing as it is enjoyable to read.” —Beth Macy, author of Dopesick Even after a decades-long opioid overdose crisis, intense controversy still rages over the fundamental nature of addiction and the best way to treat it. With uncommon empathy and erudition, Carl Erik Fisher draws on his own experience as a clinician, researcher, and alcoholic in

recovery as he traces the history of a phenomenon that, centuries on, we hardly appear closer to understanding—let alone addressing effectively. As a psychiatrist-in-training fresh from medical school, Fisher was soon face-to-face with his own addiction crisis, one that nearly cost him everything. Desperate to make sense of the condition that had plagued his family for generations, he turned to the history of addiction, learning that the current quagmire is only the latest iteration of a centuries-old story: humans have struggled to define, treat, and control addictive behavior for most of recorded history, including well before the advent of modern science and medicine. A rich, sweeping account that probes not only medicine and science but also literature, religion, philosophy, and public policy, *The Urge* illuminates the extent to which the story of addiction has persistently reflected broader questions of what it means to be human and care for one another. Fisher introduces us to the people who have endeavored to address this complex condition through the ages: physicians and politicians, activists and artists, researchers and writers, and of course the legions of people who have struggled with their own addictions. He also examines the treatments and strategies that have produced hope and relief for many people with addiction, himself included. Only by reckoning with our history of addiction, he argues—our successes and our failures—can we light the way forward for those whose lives remain threatened by its hold. *The Urge* is at once an eye-opening history of ideas, a riveting personal story of addiction and recovery, and a clinician's urgent call for a more expansive, nuanced, and compassionate view of one of society's most intractable challenges.

*World Report on Violence and Health* World Health Organization,2002 This report is part of WHO's response to the 49th World Health Assembly held in 1996 which adopted a resolution declaring violence a major and growing public health problem across the world. It is aimed largely at researchers and practitioners including health care workers, social workers, educators and law enforcement officials.

Evolving IP Marketplace Suzanne Michael,2011-05 This report recommends improvements to two areas of patent law policies affecting how well a patent gives notice to the public of what technology is protected and remedies for patent infringement. The report provides valuable insights on how courts can reform the patent system to best serve consumers. It recognizes that patents play a critical role in encouraging innovation, but it also observes that some strategies by patent holders risk distorting competition and deterring innovation. This is especially true for activity driven by poor patent notice, and by remedies that do not align the compensation received by patent holders for infringement with the economic value of their patented inventions. This is a print on demand report.

**Managing Ocean Environments in a Changing Climate** Kevin J. Noone,Ussif Rashid Sumaila,Robert J. Diaz,2013-06-29 *Managing Ocean Environments in a Changing Climate* summarizes the current state of several threats to the global oceans. What distinguishes this book most from previous works is that this book begins with a holistic, global-scale focus for the first several chapters and then provides an example of how this approach can be applied on a regional scale, for the Pacific region. Previous works usually have compiled local studies, which are essentially impossible to properly integrate to the global scale. The editors have engaged leading scientists in a number of areas, such as fisheries and marine ecosystems, ocean chemistry, marine biogeochemical cycling, oceans and climate change, and economics, to examine the threats to the oceans both individually and collectively, provide gross estimates of the economic and societal impacts of these threats, and deliver high-level recommendations. Nominated for a Katerva Award in 2012 in the Economy category State of the science reviews by known marine experts provide a concise, readable presentation written at a level for managers and students Links environmental and economic aspects of ocean threats and provides an economic analysis of action versus inaction Provides recommendations for stakeholders to help stimulate the development of policies that would help move toward sustainable use of marine resources and services

*The Strange Story Book* Mrs. Andrew Lang,2024-02-03 Now as this is the very last book of all this series that began in the long long ago, perhaps you may like to hear something of the man who thought over every one of the twenty-five, for fear lest a story should creep in which he did not wish his little boys and girls to read. He was born when nobody thought of travelling in anything but a train—a very slow one—or a steamer. It took a great deal

of persuasion to induce him later to get into a motor and he had not the slightest desire to go up in an aeroplane—or to possess a telephone. Somebody once told him of a little boy who, after giving a thrilling account at luncheon of how Randolph had taken Edinburgh Castle, had expressed a desire to go out and see the Museum; 'I like old things better than new,' said the child! 'I wish I knew that little boy,' observed the man. 'He would just suit me.' And that was true, for he too loved great deeds of battle and adventure as well as the curious carved and painted fragments guarded in museums which show that the lives described by Homer and the other old poets were not tales made up by them to amuse tired crowds gathered round a hall fire, but were real—real as our lives now, and much more beautiful and splendid. All beasts were his friends, just because they were beasts, unless they had been very badly brought up. He never could resist a cat, and cats, like beggars, tell each other these things and profit by them. A cat knew quite well that it had only to go on sitting for a few days outside the window where the man was writing, and that if it began to snow or even to rain, the window would be pushed up and the cat would spend the rest of its days stretched in front of the fire, with a saucer of milk beside it, and fish for every meal. But life with cats was not all peace, and once a terrible thing hap-pened when Dickon-draw-the-blade was the Puss in Possession. His master was passing through London on the way to take a journey to some beautiful old walled towns in the south of France where the English fought in the Hundred Years War, and he meant to spend a few weeks in the country along the Loire which is bound up with the memory of Joan of Arc. Unluckily, the night after he arrived from Scotland Dickon went out for a walk on the high trellis behind the house, and once there did not know how to get down again. Of course it was quite easy, and there were ropes of Virginia creeper to help, but Dickon lost his presence of mind, and instead of doing anything sensible only stood and shrieked, while his master got ladders and steps and clambered about in the dark and in the cold, till he put Dickon on the ground again. Then Dickon's master went to bed, but woke up so ill that he was obliged to do without the old towns, and go when he was better to a horrid place called Cannes, all dust and tea-parties.

**Limit Order Books** Frédéric Abergel,Marouane Anane,Anirban Chakraborti,Aymen Jedidi,Ioane Muni Toke,2016-05-09 A limit order book is essentially a file on a computer that contains all orders sent to the market, along with their characteristics such as the sign of the order, price, quantity and a timestamp. The majority of organized electronic markets rely on limit order books to store the list of interests of market participants on their central computer. A limit order book contains all the information available on a specific market and it reflects the way the market moves under the influence of its participants. This book discusses several models of limit order books. It begins by discussing the data to assess their empirical properties, and then moves on to mathematical models in order to reproduce the observed properties. Finally, the book presents a framework for numerical simulations. It also covers important modelling techniques including agent-based modelling, and advanced modelling of limit order books based on Hawkes processes. The book also provides in-depth coverage of simulation techniques and introduces general, flexible, open source library concepts useful to readers studying trading strategies in order-driven markets.
