Voting as a Christian: The Economic and Foreign Policy Issues Wayne A. Grudem, 2012-02-07 Written not by a journalist or politician but rather by a theology professor with a Ph.D. in New Testament studies, *Voting by the Bible: The Economic and Foreign Policy Issues* begins with the assumption that God intended the Bible to give guidance to every area of life—including how governments should function. Derived from author Wayne Grudem's magisterial *Politics According to the Bible*, this book highlights those economic and foreign-policy issues that have dominated political debate recently. Throughout, author Wayne Grudem supports political positions that would be called more

conservative than liberal. However, “it is important to understand that I see these positions as flowing out of the Bible's teachings rather than positions I hold prior to, or independently of, those biblical teachings, he writes. My primary purpose in the book is not to be liberally or conservative, or Democrat or Republican, but to explain a biblical worldview and a biblical perspective on issues of politics, law, and government. Concise yet carefully argued, this book is a must-read for any Christian concerned about current debates over the economy, the size and role of government, and the best way forward out of the current recession. Not every reader will agree with the book's conclusions. But by grounding his analysis deeply on Scripture, Grudem has equipped Christians to better understand and respond to some of today's key political debates wisely and in a manner consistent with their primary citizenship as members and ambassadors of the kingdom of God.

### **Computational Science - ICCS 2002** Peter M.A. Sloot, C.J.

Kenneth Tan, Jack J. Dongarra, Alfons G. Hoekstra, 2002-04-12  
Computational Science is the scientific discipline that aims at the development and understanding of new computational methods and techniques to model and simulate complex systems. The area of application includes natural systems – such as biology, environmental and geo-sciences, physics, and chemistry – and synthetic systems such as electronics and financial and economic systems. The discipline is a bridge between 'classical' computer science – logic, complexity, architecture, algorithms – mathematics, and the use of computers in the aforementioned areas. The relevance for society stems from the numerous challenges that exist in the various science and engineering disciplines, which can be tackled by advances made in this field. For instance new models and methods to study environmental issues like the quality of air, water, and soil, and weather and climate predictions through simulations, as well as the simulation-supported development of cars, airplanes, and medical and transport systems etc.

Paraphrasing R. Kenway (R.D. Kenway, Contemporary Physics. 1994): 'There is an important message to scientists, politicians, and industrialists: in the future science, the best industrial design and manufacture, the greatest medical progress, and the most accurate environmental monitoring and forecasting will be done by countries that most rapidly exploit the full potential of computational science'. Nowadays we have access to high-end computer architectures and a large range of computing environments, mainly as a consequence of the enormous stimulus from the various international programs on advanced computing, e.g.

**Pensées** Blaise Pascal, 1657-1662 Blaise Pascal, the precociously brilliant contemporary of Descartes, was a gifted mathematician and physicist, but it is his unfinished apologia for the Christian religion upon which his reputation now rests. The *Pensées* is a collection of philosophical fragments, notes and essays in which Pascal explores the contradictions of human nature in psychological, social, metaphysical and - above all - theological terms. Mankind emerges from Pascal's analysis as a wretched and desolate creature within an impersonal universe, but who can be transformed through faith in God's grace. ### **Project-Based Learning for Academically-Able Students**

Joseph C.L Tan,2016-11-24 This book explores the dynamic approach to student-centred learning known as project-based learning, or project work. It addresses both the concepts and practical application of project-based learning to enhance teaching and learning. It describes empirical case study research into the impact of research-based project work on independent learning for academically-able secondary school students at Hwa Chong Institution, a premier independent school in Singapore. The research investigated how students dealt with an innovative project-based learning curriculum built on a social constructivist approach designed to foster independent learning attitudes. The students had to research and initiate their own projects, and see through the entire process with guidance from their teacher mentors. The case study findings give rich insights into student perspectives and experiences as they engage in projects and respond to real-life challenges and problems. A new theory of project-based learning is presented in the form of theoretical propositions. The research has implications for the professional development of teachers as project work mentors to help prepare their students to be 'future-proof' in dealing with 21st century study, work and social challenges with confidence. The book highlights compelling reasons for schools to include some form of research-based project work within their curricula, thereby allowing students to engage in collaborative, authentic research.
