#### Entertainment Computing - ICEC 2004 Matthias

Rauterberg, 2004-08-23 The advancement of information and communication technologies (ICT) has enabled broad use of ICT and facilitated the use of ICT in the private and personal domain. ICT-related industries are directing their business targets to home applications. Among these applications, entertainment will differentiate ICT applications in the private and personal market from the office. Comprehensive research and development on ICT applications for entertainment will be different for the promotion of ICT use in the home and other places for leisure. So far engineering research and development on entertainment has never been really established in the academic communities. On the other hand entertainment-related industries such as the video and computer game industries have been growing rapidly in the last 10 years, and today the entertainment computing business outperforms the turnover of the movie industry. Entertainment robots are drawing the attention of young people.

The event called RoboCup has been increasing the number of participants year by year. Entertainment technologies cover a broad range of products and services: movies, music, TV (including upcoming interactive TV), VCR, VoD (including music on demand), computer games, game consoles, video arcades, gambling machines, the Internet (e. g. , chat rooms, board and card games, MUD), intelligent toys, edutainment, simulations, sport, theme parks, virtual reality, and upcoming service robots.

The field of entertainment computing focuses on users' growing use of entertainment technologies at work, in school and at home, and the

impact of this technology on their behavior. Nearly every working and living place has computers, and over two-thirds of children in industrialized countries have computers in their homes as well.

*Modern Sensors Handbook* Pavel Ripka, Alois Tipek, 2013-03-01  
Modern sensors working on new principles and/or using new materials and technologies are more precise, faster, smaller, use less power and are cheaper. Given these advantages, it is vitally important for system developers, system integrators and decision makers to be familiar with the principles and properties of the new sensor types in order to make a qualified decision about which sensor type to use in which system and what behavior may be expected. This type of information is very difficult to acquire from existing sources, a situation this book aims to address by providing detailed coverage on this topic. In keeping with its practical theme, the discussion concentrates on sensor types used or having potential to be used in industrial applications.

*Electronic Discourse in Language Learning and Language Teaching* Lee B. Abraham, Lawrence Williams, 2009 New technologies are constantly transforming traditional notions of language use and literacy in online communication environments. While previous research has provided a foundation for understanding the use of new technologies in instructed second language environments, few studies have investigated new literacies and electronic discourse beyond the classroom setting. This volume seeks to address this gap by providing corpus-based and empirical studies of electronic discourse analyzing social and linguistic variation as well as communicative practices in chat, discussion forums, blogs, and podcasts. Several chapters also examine the assessment and integration of new literacies. This volume will serve as a valuable resource for researchers, teachers, and students interested in exploring electronic discourse and new literacies in language learning and teaching.
