**Completing the "Big Dig"** Transportation Research Board, National Research Council, National Academy of Engineering, Division on Engineering and Physical Sciences, Board on Infrastructure and the Constructed Environment, Committee for Review of the Project Management Practices Employed on the Boston Central Artery/Tunnel (, 2003-03-21 Boston's Central Artery/Tunnel Project, a 7.8 mile system of bridges and underground highways and ramps, is the most expensive public works project ever undertaken in the United States. The original cost estimate of \$2.6 billion has already been exceeded by \$12 billion, and the project will not be completed until 2005, seven years late. The Massachusetts Turnpike Authority (MTA), the public steward of the project, requested that the National Research Council carry out an independent assessment of the project's management and contract administration practices, with a focus on the present situation and measures that should be taken to bring the project to a successful conclusion. This report presents the committee's findings and recommendations pertaining to cost, scheduling, and transitioning from the current organization dominated by consultants to an operations organization composed largely of full-time MTA staff. The report recommends that MTA establish an external, independent, peer-review program to address technical and management issues until the transition to operations and maintenance is complete; begin a media campaign now to teach drivers how to use the new system safely; and develop, immediately implement, and maintain a comprehensive security program.

**Evolution of Sanitation and Wastewater Technologies through the Centuries** Andreas N. Angelakis, Joan B. Rose, 2014-09-14 Most of the technological developments relevant to water supply and wastewater date back to more than five thousand years ago. These developments were driven by the necessity to make efficient use of natural resources, to make civilizations more resistant to destructive natural elements, and to improve the standards of life, both at public and private level. Rapid technological progress in the 20th century created a disregard for past sanitation and wastewater and stormwater technologies that were considered to be far behind the present ones. A great deal of unresolved problems in the developing world related to the wastewater management principles, such as the decentralization of the processes, the durability of the water projects, the cost effectiveness, and sustainability issues, such as protection from floods and droughts were intensified to an unprecedented degree. New problems have arisen such as the contamination of surface and groundwater. Naturally, intensification of unresolved problems has led to the reconsideration of successful past achievements. This retrospective view, based on archaeological, historical, and technical evidence, has shown two things: the similarity of physicochemical and biological principles with the present ones and the advanced level of wastewater engineering and management practices. Evolution of Sanitation and Wastewater Technologies through the Centuries presents and discusses the major achievements in the scientific fields of sanitation and hygienic water use systems throughout the millennia, and compares the water technological developments in several civilizations. It provides valuable insights into ancient wastewater and stormwater management technologies with their apparent characteristics of durability, adaptability to the environment, and sustainability. These technologies are the underpinning of modern achievements in sanitary engineering and wastewater management practices. It is the best proof that "the past is the key for the future". Evolution of Sanitation and Wastewater Technologies through the Centuries is a textbook for undergraduate and graduate courses of Water Resources, Civil Engineering, Hydraulics, Ancient History, Archaeology, Environmental Management and is also a valuable resource for all researchers in these fields. **Who Wants to Run?** Andrew B. Hall, 2019-03-25 The growing ideological gulf between Democrats and Republicans is one of the biggest issues in American politics today. Our legislatures, composed of members from two sharply disagreeing parties, are struggling to function as the founders intended them to. If we want to reduce the ideological gulf in our legislatures, we must first understand what has caused it to widen so much over the past forty years. Andrew B. Hall argues that we have missed one of the most important reasons for this ideological gulf: the increasing reluctance of moderate citizens to run for office. While political scientists, journalists, and pundits have largely focused on voters, worried that they may be too partisan, too uninformed to vote for moderate candidates, or simply too extreme in their own political views, Hall argues that our political system discourages moderate candidates from seeking office in the first place. Running for office has rarely been harder than it is in America today, and the costs dissuade moderates more than extremists. Candidates have to wage ceaseless campaigns, dialing for dollars for most of their waking hours while enduring relentless news and social media coverage. When moderate candidates are unwilling to run, voters do not even have the opportunity to send them to office. To understand what is wrong with our legislatures, then, we need to ask ourselves the question: who wants to run? If we want more moderate legislators, we need to make them a better job offer.

**Food and Beverage Management** Bernard Davis, Andrew Lockwood, Ioannis Pantelidis, Peter Alcott, 2013-01-11 This introductory textbook provides a thorough guide to the management of food and beverage outlets, from their day-to-day running through to the wider concerns of the hospitality industry. It explores the broad range of subject areas that encompass the food and beverage market and its five main sectors – fast food and popular catering, hotels and quality restaurants and functional, industrial, and welfare catering. New to this edition are case studies covering the latest industry developments, and coverage of contemporary environmental concerns, such as sourcing, sustainability and responsible farming. It is illustrated in full colour and contains end-of-chapter summaries and revision questions to test your knowledge as you progress. Written by authors with many years of industry practice and teaching experience, this book is the ideal guide to the subject for hospitality students and industry practitioners alike.

*Recent Advances in Technology Research and Education* Dumitru Luca, Lucel Sirghi, Claudiu Costin, 2017-09-08 This book presents selected contributions to the 16th International Conference on Global Research and Education Inter-Academia 2017 hosted by Alexandru Ioan Cuza University of Iași, Romania from 25 to 28 September 2017. It is the third volume in the series, following the editions from 2015 and 2016. Fundamental and applied research in natural sciences have led to crucial developments in the ongoing 4th global industrial revolution, in the course of which information technology has become deeply embedded in industrial management, research and innovation – and just as deeply in education and everyday life. Materials science and nanotechnology, plasma and solid state physics, photonics, electrical and electronic engineering, robotics and metrology, signal processing, e-learning, intelligent and soft computing have long since been central research priorities for the Inter-Academia Community (I-AC) – a body comprising 14 universities and research institutes from Japan and Central/East-European countries that agreed, in 2002, to coordinate their research and education programs so as to better address today's challenges. The book is intended for use in academic, government, and industrial R&D departments as a reference tool in research and technology education. The 42 peer-reviewed papers were written by more than 119 leading scientists from 14 countries, most of them affiliated to the I-AC.

**Borderline Personality and Mood Disorders** Lois W. Choi-Kain, John G. Gunderson, 2014-10-24 In *Borderline Personality and Mood Disorders: Comorbidity and Controversy*, a panel of distinguished experts reviews the last two decades of progress in scientific inquiry about the relationship between mood and personality disorders and the influence of this empirical data on our ways of conceptualizing and treating them. This comprehensive title opens with an introduction defining general trends both influencing the expansion of the mood disorder spectrum and undermining clinical recognition and focus on personality disorders. The overlaps and differences between MDD and BPD in phenomenology and biological markers are then reviewed, followed by a review of the overlaps and distinctions between more atypical mood disorder variants. Further chapters review the current state of thinking on the distinctions between bipolar disorder and BPD, with attention to problems of misdiagnosis and use of clinical vignettes to illustrate important distinguishing features. Two models explaining the relationship between mood, temperament, and personality are offered, followed by a review of the literature on risk factors and early signs of BPD and mood disorders in childhood through young adulthood as well as a review of the longitudinal studies on BPD and mood disorders. The last segment of the book includes three chapters on treatment. The book closes with a conclusion with a synthesis of the current status of thinking on the relationship between mood and borderline personality disorder. An invaluable contribution to the literature, *Borderline Personality and Mood Disorders: Comorbidity and Controversy* insightfully addresses the mood and personality disorders realms of psychiatry and outlines that it has moved away from contentious debate and toward the possibility of synthesis, providing increasing clarity on the relationship between mood and personality to inform improvements in clinical management of the convergence of these psychiatric domains in common practice.

**Symbolic-Numeric Computation** Dongming Wang, Li-Hong Zhi, 2007-01-22 The growing demand of speed, accuracy, and reliability in scientific and engineering computing has been accelerating the merging of symbolic and numeric computations. These two types of computation coexist in mathematics yet are separated in traditional research of mathematical computation. This book presents 27 research articles on the integration and interaction of symbolic and numeric computation.

**Neuroacanthocytosis Syndromes** Adrian Danek, 2004-11-19 *Neuroacanthocytosis Syndromes* is the first comprehensive review of a field that has not yet received the attention it deserves. Affecting the brain as well as the circulating red cells, these multi-system disorders in the past had often been mistaken for Huntington's disease. Recent breakthroughs have now identified the molecular basis of several of these. This volume grew out of the first international scientific meeting ever devoted to neuroacanthocytosis and provides in-depth information about the state of the art. Its thirty chapters were written by the leading authorities in the field to cover the clinical as well as the basic science perspective, including not only molecular genetics but also experimental pharmacology and cell membrane biology, among others. The book vehemently poses the question of how the membrane deformation of circulating red blood cells relates to degeneration of nerve cells in the brain, the basal ganglia, in particular. It provides a wealth of data that will help to solve an intriguing puzzle and ease the suffering of those affected by one of the neuroacanthocytosis syndromes.
