Fingerprints and Other Ridge Skin Impressions Christophe Champod,Chris J. Lennard,Pierre Margot,Milutin Stoilovic,2017-12-19 Since its publication, the first edition of Fingerprints and Other Ridge Skin Impressions has become a classic in the field. This second edition is completely updated, focusing on the latest technology and techniques—including current detection procedures, applicable processing and analysis methods—all while incorporating the expansive growth of literature on the topic since the publication of the original edition. Forensic science has been challenged in recent years as a result of errors, courts and other scientists contesting verdicts, and changes of a fundamental nature related to previous claims of infallibility and absolute individualization. As such, these factors represent a fundamental change in the way training, identifying, and reporting should be conducted. This book addresses these questions with a clear viewpoint as to where the profession—and ridge skin identification in particular—must go and what efforts and research will help develop the field over the next several years. The second edition introduces several new topics, including Discussion of ACE-V and research results from ACE-V studies Computerized marking systems to help examiners produce reports New probabilistic models and decision theories about ridge skin evidence interpretation, introducing Bayesnet tools Fundamental understanding of ridge mark detection techniques, with the introduction of new aspects such as nanotechnology, immunology and hyperspectral imaging Overview of reagent preparation and application Chapters cover all aspects of the subject, including the formation of friction ridges on the skin, the deposition of latent marks, ridge skin mark identification, the detection and enhancement of such marks, as well the recording of fingerprint evidence. The book serves as an essential reference for practitioners working in the field of fingermark detection and identification, as well as legal and police professionals and anyone studying forensic science with a view to understanding current thoughts and challenges in dactyloscopy.

Supervised Sequence Labelling with Recurrent Neural Networks Alex Graves,2012-02-06 Supervised sequence labelling is a vital area of machine learning, encompassing tasks such as speech, handwriting and gesture recognition, protein secondary structure prediction and part-of-speech tagging. Recurrent neural networks are powerful sequence learning tools—robust to input noise and distortion, able to exploit long-range contextual information—that would seem ideally suited to such problems. However their role in large-scale sequence labelling systems has so far been auxiliary. The goal of this book is a complete framework for classifying and transcribing sequential data with recurrent neural networks only. Three main innovations are introduced in order to realise this goal. Firstly, the connectionist temporal classification output layer allows the framework to be trained with unsegmented target sequences, such as phoneme-level speech transcriptions; this is in contrast to previous connectionist approaches, which were dependent on error-prone prior segmentation. Secondly, multidimensional recurrent neural networks extend the framework in a natural way to data with more than one spatio-temporal dimension, such as images and videos. Thirdly, the use of hierarchical subsampling makes it feasible to apply the framework to very large or high resolution sequences, such as raw audio or video. Experimental validation is provided by state-of-the-art results in speech and handwriting recognition.

Visual Methodology in Migration Studies Karolina Nikielska-Sekula,Amandine Desille,2021-07-29 This open access book explores the use of visual methods in migration studies through a combination of theoretical analyses and empirical studies. The first section looks at how various visual methods, including photography, film, and mental maps, may be used to analyse the spatial presence of migrants. The second section addresses the processual building of narratives around migration, thereby using formats such as film and visual essay, and reflecting upon the ways they become carriers and mediators of both story and theory within the subject of migration. Section three focuses on vulnerable communities and discusses how visual methods can empower these communities, thereby also focusing on the theoretical and ethical implications of migration. The fourth section addresses the issue of migrant representation in visual discourses. Based on these contributions, a concluding methodological chapter systematizes the use of visual methods in migration studies across disciplines, with regard to their empirical, theoretical, and ethical implications. Multidisciplinary in character, this book is an interesting read for students and migration scholars who engage with visual methodologies, as well as practitioners, journalists, filmmakers, photographers, curators of exhibitions who address the topic of migration visually.

Showing Up for Life Bill Gates, Sr.,Mary Ann Mackin,2009-04-28 A heartfelt, deeply personal book that shines a bright light on the values and principles that Bill Gates Sr. has learned over a lifetime of “showing up”: lessons that he learned growing up during the Great Depression, and that he instilled in his children and continues to practice on the world stage as the co-chair of the Bill & Melinda Gates Foundation. Through the course of several dozen narratives arranged in roughly chronological fashion, Gates introduces the people and experiences that influenced his thinking and guided his moral compass. Among them: the scoutmaster who taught him about teamwork and self reliance; and his famous son, Trey, whose curiosity and passion for computers and software led him to ultimately co-found Microsoft. Through revealing stories of his daughters, Kristi and Libby; his late wife, Mary, and his current wife, Mimi; and his work with Nelson Mandela and Jimmy Carter, among others, he discusses the importance of hard work, getting along, honoring a confidence, speaking out, and much more. Showing Up for Life translates one man’s experiences over fourscore years of living into an inspiring road map for readers everywhere. As Bill Gates Sr. puts it: I’m 83 years old. Representing the Bill & Melinda Gates Foundation and everyone who is a part of it has given me the opportunity to see more of the world and its rich possibilities than most people ever do. I never imagined that I’d be working this late in life, or enjoying it so much.

Suspect Citizens Frank R. Baumgartner,Derek A. Epp,Kelsey Shoub,2018-07-10 Suspect Citizens offers the most comprehensive look to date at the most common form of police-citizen interactions, the routine traffic stop. Throughout the war on crime, police agencies have used traffic stops to search drivers suspected of carrying contraband. From the beginning, police agencies made it clear that very large numbers of police stops would have to occur before an officer might interdict a significant drug shipment. Unstated in that calculation was that many Americans would be subjected to police investigations so that a small number of high-level offenders might be found. The key element in this strategy, which kept it hidden from widespread public scrutiny, was that middle-class white Americans were largely exempt from its consequences. Tracking these police practices down to the officer level, Suspect Citizens documents the extreme rarity of drug busts and reveals sustained and troubling disparities in how racial groups are treated.
