Medications for Opioid Use Disorder Save Lives National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Committee on Medication-Assisted Treatment for Opioid Use Disorder, 2019-06-16 The opioid crisis in the United States has come about because of excessive use of these drugs for both legal and illicit purposes and unprecedented levels of consequent opioid use disorder (OUD). More than 2 million people in the United States are estimated to have OUD, which is caused by prolonged use of prescription opioids, heroin, or other illicit opioids. OUD is a life-threatening condition associated with a 20-fold greater risk of early death due to overdose, infectious diseases, trauma, and suicide. Mortality related to OUD continues to escalate as this public health crisis gathers momentum across the country, with opioid overdoses killing more than 47,000 people in 2017 in the United States. Efforts to date have made no real headway in stemming this crisis, in large part because tools that already exist—like evidence-based medications—are not being deployed to maximum impact. To support the dissemination of accurate patient-focused information about treatments for addiction, and to help provide scientific solutions to the current opioid crisis, this report studies the evidence base on medication assisted treatment (MAT) for OUD. It examines available evidence on the range of parameters and circumstances in which MAT can be

effectively delivered and identifies additional research needed.

Research Opportunities for Managing the Department of Energy's Transuranic and Mixed Wastes National Research Council, Division on Earth and Life Studies, Board on Radioactive Waste Management, Committee on Long-Term Research Needs for Managing Transuranic and Mixed Wastes at Department of Energy Sites, 2002-11-07 About 155,000 cubic meters of waste contaminated with both radioactive isotopes and hazardous chemicals are stored at some 30 DOE sites, and another 450,000 cubic meters are buried. While DOE is making a concerted effort to properly dispose of this waste, the amount translates to a multi-decade effort that will require handling, characterizing, and shipping hundreds of thousands of waste containers at a total cost of billions of dollars. This report describes basic scientific research that can lead to new technologies for performing these tasks more safely and cost effectively.

On the Seashore R. Cadwallader Smith, 2015-04-23 This collection of literature attempts to compile many of the classic works that have stood the test of time and offer them at a reduced, affordable price, in an attractive volume so that everyone can enjoy them.

Violence at Work Duncan Chappell, Vittorio Di Martino, International Labour Office, 2006 Violence at work, ranging from bullying and mobbing, to threats by psychologically unstable co-workers, sexual harassment and homicide, is increasing worldwide and has reached epidemic levels in some countries. This updated and revised edition looks at the full range of aggressive acts,

offers new information on their occurrence and identifies occupations and situations at particular risk. It is organised in three sections: understanding violence at work; responding to violence at work; future action.

Lifecycle Investing Ian Ayres, Barry Nalebuff, 2010-05 Diversification provides a well-known way of getting something close to a free lunch: by spreading money across different kinds of investments, investors can earn the same return with lower risk (or a much higher return for the same amount of risk). This strategy, introduced nearly fifty years ago, led to such strategies as index funds. What if we were all missing out on another free lunch that's right under our noses? In *Lifecycle Investing*, Barry Nalebuff and Ian Ayres—two of the most innovative thinkers in business, law, and economics—have developed tools that will allow nearly any investor to diversify their portfolios over time. By using leveraging when young—a controversial idea that sparked hate mail when the authors first floated it in the pages of *Forbes*—investors of all stripes, from those just starting to plan to those getting ready to retire, can substantially reduce overall risk while improving their returns. In *Lifecycle Investing*, readers will learn How to figure out the level of exposure and leverage that's right for you How the Lifecycle Investing strategy would have performed in the historical market Why it will work even if everyone does it When to adopt the Lifecycle Investing strategy Clearly written and backed by rigorous research, *Lifecycle*

Investing presents a simple but radical idea that will shake up how we think about retirement investing even as it provides a healthier nest egg in a nicely feathered nest.

Democratization in Morocco Lise Storm, 2007-10-29 This book explores the political games of the Moroccan democratization process in the period from independence in 1956 until 2006. By combining a great degree of political theory with empirical material on Morocco, it analyzes the strategies and actions of the various political actors and evaluates the level of democracy present in the country after the adoption of new constitutions in 1962, 1970, 1972, 1980, 1992 and 1996. Lise Storm demonstrates that in at least some instances, democratization has been more than simply a survival strategy – every so often, key figures within the political elite have taken the democratization process further than strictly needed for them to stay in power. In the case of Morocco, it has been the monarch who on more than one occasion has moved the country further towards the democratic ideal than he necessarily had to, and that sometimes even against the wishes of one or more of the established political parties. This book illustrates how the Moroccan political parties, like so many of their counterparts in the region, have become the main obstacle to further democratization as most of them have never honoured – or appear to have abandoned – the key function of political parties: popular representation. *Democratization in Morocco* will be a very valuable contribution to students and researchers interested in the dynamics

behind the Moroccan democratization and the role of electoral politics in North African and Middle Eastern politics.

Achieving Nutrient and Sediment Reduction Goals in the Chesapeake Bay

National Research Council,Division on Earth and Life Studies,Water Science and Technology Board,Committee on the Evaluation of Chesapeake Bay Program Implementation for Nutrient Reduction to Improve Water Quality,2011-09-26 The Chesapeake Bay is North America's largest and most biologically diverse estuary, as well as an important commercial and recreational resource. However, excessive amounts of nitrogen, phosphorus, and sediment from human activities and land development have disrupted the ecosystem, causing harmful algae blooms, degraded habitats, and diminished populations of many species of fish and shellfish. In 1983, the Chesapeake Bay Program (CBP) was established, based on a cooperative partnership among the U.S. Environmental Protection Agency (EPA), the state of Maryland, and the commonwealths of

Pennsylvania and Virginia, and the District of Columbia, to address the extent, complexity, and sources of pollutants entering the Bay. In 2008, the CBP launched a series of initiatives to increase the transparency of the program and heighten its accountability and in 2009 an executive order injected new energy into the restoration. In addition, as part of the effort to improve the pace of progress and increase accountability in the Bay restoration, a two-year milestone strategy was introduced aimed at reducing overall pollution in the Bay by focusing on incremental, short-term commitments from each of the Bay jurisdictions. The National Research Council (NRC) established the Committee on the Evaluation of Chesapeake Bay Program Implementation for Nutrient Reduction to Improve Water Quality in 2009 in response to a request from the EPA. The committee was charged to assess the framework used by the states and the CBP for tracking nutrient and sediment control practices that are implemented in the Chesapeake Bay watershed and to evaluate the two-year milestone strategy. The committee was also to assess existing adaptive management strategies and to recommend improvements that could help CBP to meet its nutrient and sediment reduction goals. The committee did not attempt to identify every possible strategy that could be implemented but instead focused on approaches that are not being implemented to their full potential or that may have substantial, unrealized potential in the Bay watershed. Because many of these strategies have policy or societal implications that could not be fully evaluated by the committee, the

strategies are not prioritized but are offered to encourage further consideration and exploration among the CBP partners and stakeholders.

Regulatory Justice Robert A. Kagan, 1978-07-01 Regulatory Justice is based on a case study of two closely linked federal agencies—the Cost of Living Council (CLC) and the Office of Emergency Preparedness (OEP)—which administered a nationwide wage-price freeze in 1971.

Assessment of Nontimber Forest Products in the United States Under Changing Conditions James L. Chamberlain, 2018-08-24 Nontimber forest products (NTFPs) are fundamental to the functioning of healthy forests and play vital roles in the cultures and economies of the people of the United States. However, these plants and fungi used for food, medicine, and other purposes have not been fully incorporated into management, policy, and resource valuation. This report is a forest-sectorwide assessment of the state of the knowledge regarding NTFPs science and management information for U.S. forests and rangelands (and hereafter referred to as the NTFP assessment). The NTFP assessment serves as a baseline science synthesis and provides information for managing nontimber forest resources in the United States. In addition, this NTFP assessment provides information for national-level reporting on natural capital and the ecosystem services NTFPs provide. The report also provides technical input to the 2017 National Climate Assessment (NCA) under development by the U.S. Global Change Research Program (USGCRP).

Resilience, Adaptive Peacebuilding and Transitional Justice Janine Natalya

Clark, Michael Ungar, 2021-10-07 Explores innovative ways to build peace after large-scale violence by combining resilience, adaptive peacebuilding and transitional justice.

Why I Killed Gandhi Nathuram Godse, 2020-10-02 While the nation was celebrating Independence from British Rule and singing all praises for the 'Father of The Nation' – Mahatma Gandhi, the news of his assassination came as a shock. He was shot in the chest three times while he was walking towards the prayer grounds at the Birla House, New Delhi. The man behind the assassination – Nathuram Godse was a well known nationalist. He was arrested at the crime scene and sentenced to death after a year long trial. The book contains the final speech given by Godse in the court, mentioning the reason behind the drastic step he took.

Source-to-Sink Fluxes in Undisturbed Cold Environments Achim A. Beylich, John C. Dixon, Zbigniew Zwoliński, 2016-07-07 Amplified climate change and ecological sensitivity of polar and cold climate environments are key global environment issues. Understanding how projected climate change will alter surface environments in these regions is only possible when present day source-to-sink fluxes can be quantified. The book provides the first global synthesis and integrated analysis of environmental drivers and quantitative rates of solute and sedimentary fluxes in cold environments, and the likely impact of projected climate change. The focus on largely undisturbed cold environments allows ongoing climate change effects to be detected and,

moreover, distinguished from anthropogenic impacts. A novel approach for coordinated and integrative process geomorphic research is introduced to enable better comparison between studies. This highly topical and multidisciplinary book, which includes case studies covering Arctic, Antarctic, and alpine environments, will be of interest to graduate students and researchers in the fields of geomorphology, sedimentology and global environmental change.

Network Troubleshooting Tools Joseph D Sloan,2001-08-09 Over the years, thousands of tools have been developed for debugging TCP/IP networks. They range from very specialized tools that do one particular task, to generalized suites that do just about everything except replace bad Ethernet cables. Even better, many of them are absolutely free. There's only one problem: who has time to track them all down, sort through them for the best ones for a particular purpose, or figure out how to use them?Network Troubleshooting Tools does the work for you--by describing the best of the freely available tools for debugging and troubleshooting. You can start with a lesser-known version of ping that diagnoses connectivity problems, or take on a much more comprehensive program like MRTG for graphing traffic through network interfaces. There's tkined for mapping and automatically monitoring networks, and Ethereal for capturing packets and debugging low-level problems.This book isn't just about the tools available for troubleshooting common network problems. It also outlines a systematic approach to network troubleshooting:

how to document your network so you know how it behaves under normal conditions, and how to think about problems when they arise, so you can solve them more effectively. The topics covered in this book include: Understanding your network Connectivity testing Evaluating the path between two network nodes Tools for capturing packets Tools for network discovery and mapping Tools for working with SNMP Performance monitoring Testing application layer protocols Software sources If you're involved with network operations, this book will save you time, money, and needless experimentation.
