**Protein-Ligand Interactions and Drug Design** Flavio Ballante, 2022-04-07 This detailed book collects modern and established computer-based methods aimed at addressing the drug discovery challenge from disparate perspectives by exploiting information on ligand-protein recognition. Beginning with methods that allow for the exploration of specific areas of chemical space and the designing of virtual libraries, the volume continues with sections on methods based on docking, quantitative models, and molecular dynamics simulations, which are employed for ligand discovery or development, as well as methods exploiting an ensemble of protein structures for the identification of potential protein targets. Written for the highly successful Methods in Molecular Biology series, chapters include introductions to their respective topics, lists of the necessary materials, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and cutting-edge, Protein-Ligand Interactions and Drug Design provides detailed practical procedures of solid computer-aided drug design methodologies employed to rationalize and optimize protein-ligand interactions, for experienced researchers and novices alike.

**Protein-Ligand Interactions** Hans-Joachim Böhm, Gisbert Schneider, 2006-03-06 The lock-and-key principle formulated by Emil Fischer as early as the end of the 19th century has still not lost any of its significance for the life sciences. The basic aspects of ligand-protein interaction may be summarized under the term 'molecular recognition' and concern the specificity as well as stability of ligand binding. Molecular recognition is thus a central topic in the development of active substances, since stability and specificity determine whether a substance can be used as a drug. Nowadays, computer-aided prediction and intelligent molecular design make a large contribution to the constant search for, e. g., improved enzyme inhibitors, and new concepts such as that of pharmacophores are being developed. An up-to-date presentation of an eternally young topic, this book is an

indispensable information source for chemists, biochemists and pharmacologists dealing with the binding of ligands to proteins.

**The Geopolitics of Emotion** Dominique Moisi, 2009-05-05 In the first book to investigate the far-reaching emotional impact of globalization, Dominique Moïsi shows how the geopolitics of today is characterized by a "clash of emotions." The West, he argues, is dominated and divided by fear. For Muslims and Arabs, a culture of humiliation is quickly devolving into a culture of hatred. Asia, on the other hand, has been able to concentrate on building a better future, so it is creating a new culture of hope. Moïsi, a leading authority on international affairs, explains that in order to understand our changing world, we need to confront emotion. And as he makes his case, he deciphers the driving emotions behind our cultural differences, delineating a provocative and important new perspective on globalization.

### **Orlicz Spaces and Generalized Orlicz Spaces** Petteri Harjulehto, Peter

Hästö, 2019-05-07 This book presents a systematic treatment of generalized Orlicz spaces (also known as Musielak-Orlicz spaces) with minimal assumptions on the generating  $\Phi$ -function. It introduces and develops a technique centered on the use of equivalent  $\Phi$ -functions. Results from classical functional analysis are presented in detail and new material is included on harmonic analysis. Extrapolation is used to prove, for example, the boundedness of Calderón-Zygmund operators. Finally, central results are provided for Sobolev spaces, including Poincaré and Sobolev-Poincaré inequalities in norm and modular forms. Primarily aimed at researchers and PhD students interested in Orlicz spaces or generalized Orlicz spaces, this book can be used as a basis for advanced graduate courses in analysis.

Second Order Equations of Elliptic and Parabolic Type E. M. Landis, 1997-12-02 Most books on elliptic and parabolic equations emphasize existence and uniqueness of solutions. By contrast, this book focuses on the qualitative properties of solutions. In addition to the discussion of classical results for equations with smooth coefficients (Schauder estimates and the solvability of the Dirichlet problem for elliptic equations; the Dirichlet problem for the heat equation), the book describes properties of solutions to second order elliptic and parabolic equations with measurable coefficients near the boundary and at infinity. The book presents a fine elementary introduction to the theory of elliptic and parabolic equations of second order. The precise and clear exposition is suitable for graduate students as well as for research mathematicians who want to get acquainted with this area of the theory of partial differential equations.
