Conservation Biology for All Navjot S. Sodhi,Paul R. Ehrlich,2010-01-08 Conservation Biology for All provides cutting-edge but basic conservation science to a global readership. A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting-edge conservation knowledge as widely as possible. Important topics such as balancing conservation and human needs, climate change, conservation planning, designing and analyzing conservation research, ecosystem services, endangered species management, extinctions, fire, habitat loss, and invasive species are covered. Numerous textboxes describing additional relevant material or case studies are also included. The global biodiversity crisis is now unstoppable; what can be saved in the developing world will require an educated constituency in both the developing and developed world. Habitat loss is particularly acute in developing countries, which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found. Sadly, developing world conservation scientists have found it difficult to access an authoritative textbook, which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest. There is now an urgent need to educate the next generation of scientists in developing countries, so that they are in a better position to protect their natural resources.

International Public Health: Diseases, Programs, Systems and Policies Michael Merson,Robert E. Black,Anne Mills,2006 In this text for graduate students in various disciplines who are studying international public health, the author focuses on conditions in low- and middle-income countries, occasionally making reference to high-income countries. He suggests approaches for fostering public health, and discusses future challenges for health promotion and disease prevention around the world. The text can also be used as a reference by those working in government agencies, international health and development agencies, and NGOs.

Measuring Arthropod Biodiversity Jean Carlos Santos,Geraldo Wilson Fernandes,2020-11-11 This book brings together a wide range of sampling methods for investigating different arthropod groups. Each chapter is organized to describe and evaluate the main sampling methods (field methods, materials and supplies, sampling protocols, effort needed, and limitations); in addition, some chapters describe the specimen preparation and conservation, species identification, data collection and management (treatment, statistical analysis, interpretation), and ecological/conservation implications of arthropod communities. The book aims to be a reference for zoologists, entomologists, arachnologists, ecologists, students, researchers, and for those interested in arthropod science and biodiversity. We hope the book will contribute to advance knowledge on field assessments and conservation strategies. Arthropods represent the most speciose group of organisms on Earth, with a remarkable number of species and interactions still to be described. These invertebrates are recognized for playing key ecological roles in terrestrial,

freshwater and marine ecosystems. Because of the increasing and relentless threats arthropods are facing lately due to a multitude of human induced drivers, this book represents an important contribution to assess their biodiversity and role in ecosystem functioning and generation of ecosystem services worldwide.

Developmental Psychopathology Suniya S. Luthar, 1997-02-28 This volume provides a forum for interdisciplinary perspectives in the emerging discipline of developmental psychopathology. The goal is to elucidate the four central principles of this discipline: the application of classical developmental theory in work with atypical populations; the delineation of insights from atypical populations that inform developmental theory; the integration of methods and theories from various social science disciplines; and the description of implications for interventions and social policy. So far, there have been few efforts to present each of these principles of developmental psychopathology within a single, unifying framework. Illustrating these central principles across a range of state-of-the-art research programs, this unique collection of papers will be invaluable for students, current researchers, and clinicians seeking a sound understanding of this rapidly emerging social science discipline.

Each Woman's Menopause: An Evidence Based Resource Patricia Geraghty, 2021-12-02 This book is designed to meet the needs of nurse practitioners, other advanced practice nurses, and allied health professionals working in women's health, primary care, and other specialties. The multiple roles the clinician embraces in menopause management include that of direct caregiver, manager of therapeutics, educator, and interdisciplinary team member or leader. This book provides updated, evidence based information on the menopause transition from the late reproductive stage to post-menopause to optimize the interaction of the clinician and the individual woman in each of those roles. Women's lived experiences of menopause and women's concerns regarding both the menopause transition and the choice of care options are included as critical components of shared therapy decisions. The review of natural menopause physiology and the variability of menopause symptoms are inclusive of diverse women and diverse trajectories. The impact of menopause on chronic disease, sleep, weight and nutrition, mood and cognition, urogenital health and sexuality, as well as vasomotor symptoms are each developed as individual topics by experts in those fields. Evidence based management using hormonal and non-hormonal options, and life-style and other complementary interventions are discussed with the most updated advantages and disadvantages of each treatment option. Consistent with advanced practice nursing theory, the approach is whole patient focused.

Drug Delivery Monika Schäfer-Korting, 2010-03-10 In the view of most experts pharmacology is on drugs, targets, and actions. In the context the drug as a rule is seen as

an active pharmaceutical ingredient and not as a complex mixture of chemical entities of a well defined structure. Today, we are becoming more and more aware of the fact that delivery of the active compound to the target site is a key. The present volume gives a topical overview on various modern approaches to drug targeting covering today's options for specific carrier systems allowing successful drug treatment at various sites of the body difficult to address and allowing to increase the benefit-risk-ratio to the optimum possible.
