The last comprehensive review of this evidence by the Department of Health and Human Services (DHHS) was in the 1986 Surgeon General's report, *The Health Consequences of Involuntary Smoking*, published 20 years ago this year. This new report updates the evidence of the harmful effects of involuntary exposure to tobacco smoke. This large body of research findings is captured in an accompanying dynamic database that profiles key epidemiologic findings, and allows the evidence on health effects of exposure to tobacco smoke to be synthesized and updated (following the format of the 2004 report, *The Health Consequences of Smoking*). The database enables users to explore the data and studies supporting the conclusions in the report. Detection of Malingering during Head Injury Litigation Arthur MacNeill Horton, Jr., Cecil R. Reynolds, 2021-07-22 Expanding both the conceptual and clinical knowledge base on the subject, the Third Edition of Detection of Malingering during Head Injury Litigation offers the latest detection tools and techniques for veteran and novice alike. Increased public awareness of traumatic brain injuries has fueled a number of significant developments: on the one hand, more funding and more research related to these injuries and their resulting deficits; on the other, the possibility

of higher stakes in personal injury suits—and more reasons for individuals to feign injury. As in its earlier editions, this practical revision demonstrates how to combine clinical expertise, carefully-gathered data, and the use of actuarial models as well as common sense in making sound evaluations and reducing ambiguous results. The book navigates the reader through the many caveats that come with the job, beginning with the scenario that an individual may be malingering despite having an actual brain injury. Among the updated features: Specific chapters on malingering on the Word Memory Test (WMT), Test of Malingered Memory (TOMM) MMPI-2, MMPI-RF and MMPI-3; Detailed information regarding performance on performance validity tests in the domain of executive functioning and memory, Guidelines for explaining performance and symptom validity testing to the trier of fact; Chapters on mild TBI in children in head injury litigation, cultural concerns and ethical issues in the context of head injury litigation.

Infected Kin Ellen Block, Will McGrath, 2019-05-17
AIDS has devastated communities across southern Africa. In Lesotho, where a quarter of adults are infected, the wide-ranging implications of the disease have been felt in every family, disrupting key aspects of social life. In *Infected Kin*, Ellen Block and Will McGrath argue that AIDS is fundamentally a kinship disease, examining the ways it transcends infected individuals and seeps into kin relations and networks of care. While much AIDS scholarship has turned away from the difficult daily realities of those affected by the disease, *Infected Kin* uses both ethnographic scholarship and creative nonfiction to bring to life the joys and struggles of the Basotho people at the heart of the AIDS pandemic. The result is a book accessible to wide readership, yet built upon scholarship and theoretical contributions that ensure *Infected Kin* will remain relevant to anyone

interested in anthropology, kinship, global health, and care. Supplementary instructor resources (<https://www.csbsju.edu/sociology/faculty/anthropology-teaching-resources/infected-kin-teaching-resources>)
