David Hebditch and Ken Connor examine, with a critical eye, successful as well as failed coup attempts throughout the twentieth century with the aim of showing their readers just what it takes to swiftly and soundly overthrow a government. Exploring

coups from Nigeria, to Cuba, to Iraq, and with true stories of SAS combat written by Ken Connor, the book gives an insightful glimpse into this violent and rarely-seen world of shifting power. *How to Stage a Military Coup* is a unique textbook for the armchair revolutionary, as well as a practical guide for the idealist with a soft spot for the sound of artillery fire. The Study of Names Frank Nuessel, 1992-09-30 An introduction and research guide to onomastics the study of names, this book covers the major areas of name study in individual chapters on personal names (anthroponyms), place names (toponyms), acronyms, brand names and trade names. A final chapter treats special areas such as designations for athletic teams, musical groups, and tropical storms, names of awards and alcoholic beverages, animal names, code names, and scientific nomenclature. The wealth of topics covered in each chapter may be gleaned from a listing of their subheadings (see table of contents). Included are such fascinating subjects as pseudonyms and personalized license plates, names for retirement communities and airports, racist and ethnic slurs, eponyms, and names of diseases and syndromes. Every topic comprises a discussion of underlying principles as well as numerous illustrative examples. Infused with linguistic interpretation, the study provides explanations based on phonetics (sounds of speech), morphology (shapes of names), syntax (place in sentence structure) and semantics (meaning). Throughout, special attention is given to classification and methodologies. The introduction clearly articulates theoretical aspects of onomastics, and a glossary of linguistic and onomastic terms appears as an appendix. Additional appendixes provide information on organizations and journals related to the field and a list of

onomastic bibliographies. An extensive reference list and index complete the work. Useful as a text or reference book, The Study of Names is explicit enough to inform students of linguistics, yet clear and lively enough to be a good read for anyone interested in names and naming.

Alluvial Fan Flooding National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Alluvial Fan Flooding, 1996-11-07 Alluvial fans are gently sloping, fan-shaped landforms common at the base of mountain ranges in arid and semiarid regions such as the American West. Floods on alluvial fans, although characterized by relatively shallow depths, strike with little if any warning, can travel at extremely high velocities, and can carry a tremendous amount of sediment and debris. Such flooding presents unique problems to federal and state planners in terms of quantifying flood hazards, predicting the magnitude at which those hazards can be expected at a particular location, and devising reliable mitigation strategies. Alluvial Fan Flooding attempts to improve our capability to determine whether areas are subject to alluvial fan flooding and provides a practical perspective on how to make such a determination. The book presents criteria for determining whether an area is subject to flooding and provides examples of applying the definition and criteria to real situations in Arizona, California, New Mexico, Utah, and elsewhere. The volume also contains recommendations for the Federal Emergency Management Agency, which is primarily responsible for floodplain mapping, and for state and local decisionmakers involved in flood hazard reduction.
