Data Information Literacy Jake Carlson, Lisa R. Johnston, 2015-01-15 Given the increasing attention to managing, publishing, and preserving research datasets as scholarly assets, what competencies in working with research data will graduate students in STEM disciplines need to be successful in their fields? And what role can librarians play in helping students attain these competencies? In addressing these questions, this book articulates a new area of opportunity for librarians and other information professionals, developing educational programs that introduce graduate students to the knowledge and skills needed to work with research data. The term data information literacy has been adopted with the deliberate intent of tying two emerging roles for librarians together. By viewing information literacy and data services as complementary rather than separate activities, the contributors seek to leverage the progress made and the lessons learned in each service area. The intent of the publication is to help librarians cultivate strategies and approaches for developing data information literacy programs of their own using the work done in the multiyear, IMLS-supported Data Information Literacy (DIL) project as real-world case studies. The initial chapters introduce the concepts and ideas behind data information literacy, such as the twelve data competencies. The middle chapters describe five case studies in data information literacy conducted at different institutions (Cornell, Purdue, Minnesota, Oregon), each focused on a different disciplinary area in science and engineering. They detail the approaches taken, how the programs were implemented, and the assessment metrics used to evaluate their impact. The later chapters include the DIL Toolkit, a distillation of the lessons learned, which is presented as a handbook for librarians interested in developing their own DIL programs. The book concludes with recommendations for future directions and growth of data information literacy. More information about the DIL project can be found on the project's website: [datainfolit.org](http://datainfolit.org).

The Art of Debugging with GDB, DDD, and Eclipse Norman Matloff, Peter Jay Salzman, 2008-09-15 Debugging is crucial to successful software development, but even many experienced programmers find it challenging. Sophisticated debugging tools are available, yet it may be difficult to determine which features are useful in which situations. The Art of Debugging is your guide to making the debugging process more efficient and effective. The Art of Debugging illustrates the use three of the most popular debugging tools on Linux/Unix platforms: GDB, DDD, and Eclipse. The text-command based GDB (the GNU Project Debugger) is included with most distributions. DDD is a popular GUI front end for GDB, while Eclipse provides a complete integrated development environment. In addition to offering specific advice for debugging with each tool, authors Norm Matloff and Pete Salzman cover general strategies for improving the process of finding and fixing coding errors, including how to: -Inspect variables and data structures -Understand segmentation faults and core dumps -Know why your program crashes or throws exceptions -Use features like catchpoints, convenience variables, and artificial arrays -Avoid common debugging pitfalls Real world examples of coding errors help to clarify the authors' guiding principles, and coverage of complex topics like thread, client-server, GUI, and parallel programming debugging will make you even more proficient. You'll also learn how to prevent errors in the first place with text editors, compilers, error reporting, and static code checkers. Whether you dread the thought of debugging your programs or simply want to improve your current debugging efforts, you'll find a valuable ally in The Art of Debugging.

**One-Day, One-Problem** Glen O'Grady, Elaine Yew, Karen P.L. Goh, Henk Schmidt, 2012-04-12 One-day, one-problem is a unique adaptation of problem-based learning (PBL) pioneered at Republic Polytechnic, Singapore. Here students are challenged each day with a problem from their domain and attain the necessary learning outcomes in the process of responding to the problem.

Throughout the day students would engage in small group discussions, self-directed learning and conversations with their teacher who plays the role of a facilitator. This approach to learning and instruction represents a new brand of constructivist learning in a more structured learning environment compared to conventional PBL. This book contains a series of chapters by authors with first-hand experience in the One-day, one-problem PBL approach. Unlike other books on PBL, the chapters are both research-informed and practical. Results of empirical studies into the factors of PBL such as quality of problems, tutor behaviours, scaffoldings, student learning and interest are discussed together with practical implications for the educator. The book begins with an overview of the one-day, one-problem process, providing a viewpoint from both the student and tutor. Republic Polytechnic's pedagogical philosophy and epistemological belief of education are introduced with the intent to share how the polytechnic designed and implemented a system that supports the philosophical beliefs. Results and practical implications of empirical studies on the various factors that influence students' learning in PBL are discussed. These include the quality of problems and the use of scaffoldings for students' learning, tutors as facilitators, preparation of staff for PBL, student assessment, how students learn in the process of PBL and student interest.

*Artificial Intelligence, China, Russia, and the Global Order* Air University Air University Press, Nicholas D. Wright, 2019-10-19 Given the wide-ranging implications for global competition, domestic political systems and daily life, US policymakers must prepare for the impacts of new artificial intelligence (AI)-related technologies. Anticipating AI's impacts on the global order requires US policy makers' awareness of certain key aspects of the AI-related technologies--and how those technologies will interact with the rapidly changing global system of human societies. One area that has received little in-depth examination to date is how AI-related technologies could affect countries' domestic political systems--whether authoritarian, liberal democratic, or a hybrid of the two--and how they might impact global competition between different regimes. This work highlights several key areas where AI-related technologies have clear implications for globally integrated strategic planning and requirements.

Renewable Energy law and Development Richard L. Ottinger, 2013 Half the world's new electric generating capacity added each year from 2008 onwards has been renewable, mainly now in developing countries. So is the quarter-trillion dollars a year of private investment in modern renewable energy. Organizations like REN21 and Bloomberg New Energy Finance track exciting and accelerating recent progress. But to understand how these renewable energy efforts in major developing countries have been structured and are evolving requires a guidebook with a legal and institutional perspective. Energy veteran Richard Ottinger and his Pace Law School graduate students from many key countries have now provided that guide clearly written, well-organized, and a great public service. Amory B. Lovins, Rocky Mountain Institute, US Richard Ottinger, a pioneer in the development of national policy to promote renewable energy in the US, and his Pace Law School research assistants have created a unique piece of work on the legal and policy issues behind the global growth of renewable energy. Their book is indispensable as a text for law professors and students and as the definitive reference for lawyers and policymakers about developing and emerging country policies driving renewable energy use around the world. The fact that most of the research assistants are natives of the countries on which they researched and wrote their respective chapters gives the book uniquely credible insights into the legal and policy challenges faced by these countries, providing valuable lessons for others wanting to build renewable energy capacity in their own countries. Robert Noun, Former Executive Director of Public Affairs, National Renewable Energy Laboratory and Adjunct Professor, University of Denver Sturm College of Law, US This book is unique in the literature on renewable energy law and policy. Firstly, it focuses on developing countries which means it fills the gap in international literature currently lacking on law and policy on renewable energy in developing countries. Secondly, it applies a basic uniform analysis method to each of the case studies. This makes the results of the case studies considerably comparable. Finally, based on the introduction to the related laws, policies and projects of the target countries, the author summarizes their experience and lessons. It is these summaries that reflect the purpose and value of this book. Wang Xi, Shanghai Jiao Tong University, Shanghai, China This is a unique book written by one of the leading scholars in the field. It uses detailed case studies to analyze the successes, failures and challenges of renewable energy initiatives in

developing and emerging countries. Incorporating the insights and perspectives of researchers who come from the respective countries covered, the study compares some of the most exciting success stories, including: Chinas meteoric rise from near zero use of renewable energy to being the world leader in solar thermal, solar photovoltaic and wind energy; Brazils success in becoming the worlds top ethanol producer and exporter; and Indias pioneering use of a hedge plant to produce biodiesel and its use of animal and human wastes for rural electrification. The book also describes Indonesias disastrous palm oil program which cut down its forests and excavated its peat bogs. It concludes that good leadership is the largest factor in success, but that it is also critical to include public participation, training, transparency, environmental consideration, fair labor practices, protection against exploitation and enforcement. This book is designed to be helpful to other countries seeking to initiate renewable energy programs. It will appeal to local administrators and policymakers, field personnel from UN agencies and NGOs, and renewable energy funders, as well as to academic researchers.

*Team Geek* Brian W. Fitzpatrick, Ben Collins-Sussman, 2012-07-06 In a perfect world, software engineers who produce the best code are the most successful. But in our perfectly messy world, success also depends on how you work with people to get your job done. In this highly entertaining book, Brian Fitzpatrick and Ben Collins-Sussman cover basic patterns and anti-patterns for working with other people, teams, and users while trying to develop software. This is valuable information from two respected software engineers whose popular series of talks—including *Working with Poisonous People*—has attracted hundreds of thousands of followers. Writing software is a team sport, and human factors have as much influence on the outcome as technical factors. Even if you've spent decades learning the technical side of programming, this book teaches you about the often-overlooked human component. By learning to collaborate and investing in the soft skills of software engineering, you can have a much greater impact for the same amount of effort. *Team Geek* was named as a Finalist in the 2013 Jolt Awards from Dr. Dobb's Journal. The publication's panel of judges chose five notable books, published during a 12-month period ending June 30, that every serious programmer should read.
