Carcass management guidelines Miller, L.P., Miknis, R.A. and Flory, G.A.,2020-12-28 Animal disease outbreaks pose many challenges for response authorities that can impact livelihoods, food security, and the environment. Proper disposal of animal carcasses that die or are culled during the outbreak is a key component of a successful response to a disease outbreak because it helps prevent or mitigate the further spread of pathogens and in case of zoonotic disease, to further protect human health. The practical guidelines presented hereby provide carcass and related waste management considerations and recommended procedures for use by Veterinary Services and other official response authorities when developing animal disease outbreak containment and eradication plans. The guidelines apply to animal disease outbreaks of varying sizes, whether the outbreak is isolated to a single premise or spans a region to cover numerous premises. However, they are focused on small to medium-sized holdings in countries without access to engineered landfills, rendering plants or controlled incinerators. The guidelines are written in the spirit of “keep it simple and doable”, considering the limited human and financial resources that many countries are constrained with. Its presentation and practical approach ensure that countries will find it very useful for their emergency operation procedures toolbox. Further, the guidelines directly contribute to the one-health approach by protecting the health of animals, humans, and the environment.

The World Health Report 2006 World Health Organization,2006-03-23 The 2006 World Health Report focuses on the chronic shortages of doctors, midwives, nurses and other health care support workers in the poorest countries of the world where they are most needed. This is particularly true in sub-Saharan Africa, which has only four in every hundred global health workers but has a quarter of the global burden of disease, and less than one per cent of the world's financial resources. Poor working conditions, high rates of attrition due to illness and migration, and education systems that are unable to pick up the slack reflect the depth of the challenges in these crisis countries. This report considers the challenges involved and sets out a 10-year action plan designed to tackle the crisis over the next ten years, by which countries can strengthen their health system by building their health workforces and institutional capacity with the support of global partners.
