**The Fingerprint** U. S. Department Justice,2014-08-02 The idea of The Fingerprint Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.

**Digital Media, Youth, and Credibility** Miriam J. Metzger,Andrew J. Flanagin,2008 The difficulties in determining the quality of information on the Internet--in particular, the implications of wide access and questionable credibility for youth and learning. Today we have access to an almost inconceivably vast amount of information, from sources that are increasingly portable, accessible, and interactive. The Internet and the explosion of digital media content have made more information available from more sources to more people than at any other time in human history. This brings an infinite number of opportunities for learning, social connection, and entertainment. But at the same time, the origin of information, its quality, and its veracity are often difficult to assess. This volume addresses the issue of credibility--the objective and subjective components that make information believable--in the contemporary media environment. The contributors look particularly at youth audiences and experiences, considering the implications of wide access and the questionable credibility of information for youth and learning. They discuss such topics as the credibility of health information online, how to teach credibility assessment, and public policy solutions. Much research has been done on credibility and new media, but little of it focuses on users younger than college students. Digital Media, Youth, and Credibility fills this gap in the literature. Contributors Matthew S. Eastin, Gunther Eysenbach, Brian Hilligoss, Frances Jacobson Harris, R. David Lankes, Soo Young Rieh, S. Shyam Sundar, Fred W. Weingarten

Wolf,Xiongwu Wu,Yi Xue,Darrin M. York,Shiji Zhao,Peter A. Kollman,2021-06-13 Amber is the collective name for a suite of programs that allow users to carry out molecular dynamics simulations, particularly on biomolecules. None of the individual programs carries this name, but the various parts work reasonably well together, and provide a powerful framework for many common calculations. The term Amber is also used to refer to the empirical force fields that are implemented here. It should be recognized, however, that the code and force field are separate: several other computer packages have implemented the Amber force fields, and other force fields can be implemented with the Amber programs. Further, the force fields are in the public domain, whereas the codes are distributed under a license agreement. The Amber software suite is divided into two parts: AmberTools21, a collection of freely available programs mostly under the GPL license, and Amber20, which is centered around the pmemd simulation program, and which continues to be licensed as before, under a more restrictive license. Amber20 represents a significant change from the most recent previous version, Amber18. (We have moved to numbering Amber releases by the last two digits of the calendar year, so there are no odd-numbered versions.) Please see <https://ambermd.org> for an overview of the most important changes. AmberTools is a set of programs for biomolecular simulation and analysis. They are designed to work well with each other, and with the "regular" Amber suite of programs. You can perform many simulation tasks with AmberTools, and you can do more extensive simulations with the combination of AmberTools and Amber itself. Most components of AmberTools are released under the GNU General Public License (GPL). A few components are in the public domain or have other open-source licenses. See the README file for more information.

**Digital Copyright** Jessica Litman, Professor Litman's work stands out as well-researched, doctrinally solid, and always piercingly well-written.-JANE GINSBURG, Morton L. Janklow Professor of Literary and Artistic Property, Columbia UniversityLitman's work is distinctive in several respects: in her informed historical perspective on copyright law and its legislative policy; her remarkable ability to translate complicated copyright concepts and their implications into plain English; her willingness to study, understand, and take seriously what ordinary people think copyright law means; and her creativity in formulating alternatives to the copyright quagmire. -PAMELA SAMUELSON, Professor of Law and Information Management; Director of the Berkeley Center for Law & Technology, University of California, BerkeleyIn 1998, copyright lobbyists succeeded in persuading Congress to enact laws greatly expanding copyright owners' control over individuals' private uses of their works. The efforts to enforce these new rights have resulted in highly publicized legal battles between established media and new upstarts.In this enlightening and well-argued book, law professor Jessica Litman questions whether copyright laws crafted by lawyers and their lobbyists really make sense for the vast majority of us. Should every interaction between ordinary consumers and copyright-protected works be restricted by law? Is it practical to enforce such laws, or expect consumers to obey them? What are the effects of such laws on the exchange of information in a free society?Litman's critique exposes the 1998 copyright law as an incoherent patchwork. She argues for reforms that reflect common sense and the way people actually behave in their daily digital interactions.This paperback edition includes an afterword that comments on recent developments, such as the end of the Napster story, the rise of peer-to-peer file sharing, the escalation of a full-fledged copyright war, the filing of lawsuits against thousands of individuals, and the June 2005 Supreme Court decision in the Grokster case.Jessica Litman (Ann Arbor, MI) is professor of law at Wayne State University and a widely recognized expert on copyright law.

**Pro-environmental Behaviors** Kiyo Kurisu,2016-01-28 This book offers a much-needed practical and conceptual guide for various pro-environmental behaviors. Written by an expert in both the environmental psychology and engineering fields, the book presents an overview of various pro-environmental behaviors (Chapter 1), the psychological background of behaviors (Chapters 2 and 3), how to survey and understand pro-environmental behaviors using questionnaires (Chapter 4) and how to know the actual environmental burdens derived by each behavior using life-cycle assessment (LCA) (Chapter 5), and measures to foster the behaviors and selected case studies for practitioners (Chapter 6). Readers will find Chapters 1, 4, and 5 particularly unique and useful; they provide an overview of many environmental behaviors and also the practical academic tools for analyzing environmental behaviors, such as questionnaire procedures, questions lists ("scales" in psychology), statistical tools, software, LCA methodologies, and databases. The book addresses the needs of academics and practitioners and is well suited as a textbook and reference guide for those studying or working in environmental engineering (systematic research), social psychology (environmental psychology), environmental education, and sustainability science. Policymakers will find the questionnaire list useful, as it can help them to grasp citizens' environmental concerns and actual behaviors. The behavior list and LCA can be used to make manuals or guidelines for citizens to enhance environmental behaviors, and the case studies provide an informative basis for designing programs and workshops for citizens. Although the field of "pro-environmental behaviors" has been intensively dealt with by European researchers, their approaches have largely been limited to psychological viewpoints and program (education) development through small case studies. Further, the target behaviors are often limited to recycling and energy/water savings. In contrast, this book provides the first introduction to pro-environmental behaviors as a whole. As pro-environmental behaviors have become increasingly important not only in developed but also in developing countries, this publication represents a timely resource for the growing number of researchers exploring pro-environment behaviors.
