PoC or GTFO Manul Laphroaig, 2017-10-31 This highly anticipated print collection gathers articles published in the much-loved International Journal

of Proof-of-Concept or Get The Fuck Out. PoC||GTF0 follows in the tradition of Phrack and Uninformed by publishing on the subjects of offensive security research, reverse engineering, and file format internals. Until now, the journal has only been available online or printed and distributed for free at hacker conferences worldwide. Consistent with the journal's quirky, biblical style, this book comes with all the trimmings: a leatherette cover, ribbon bookmark, bible paper, and gilt-edged pages. The book features more than 80 technical essays from numerous famous hackers, authors of classics like Reliable Code Execution on a Tamagotchi, ELF's are Dorky, Elves are Cool, Burning a Phone, Forget Not the Humble Timing Attack, and A Sermon on Hacker Privilege. Twenty-four full-color pages by Ange Albertini illustrate many of the clever tricks described in the text.

**Computer Organization and Design** David A. Patterson, John L. Hennessy, 2004-08-07 This best selling text on computer organization has been thoroughly updated to reflect the newest technologies. Examples highlight the latest processor designs, benchmarking standards, languages and tools. As with previous editions, a MIPS processor is the core used to present the fundamentals of hardware technologies at work in a computer system. The book presents an entire MIPS instruction set—instruction by instruction—the fundamentals of assembly language, computer arithmetic, pipelining, memory hierarchies and I/O. A new aspect of the third edition is the explicit connection between program performance and CPU performance. The authors show how hardware and software components—such as the specific algorithm, programming language, compiler, ISA and processor implementation—impact program performance. Throughout the book a new feature focusing on program performance describes how to search for bottlenecks and improve performance in various parts of the system. The book digs deeper into the hardware/software interface, presenting a complete view of the function of the programming language and compiler—crucial for understanding computer organization. A CD provides a toolkit of simulators and compilers along with

tutorials for using them. For instructor resources click on the grey companion site button found on the right side of this page. This new edition represents a major revision. New to this edition: \* Entire Text has been updated to reflect new technology \* 70% new exercises. \* Includes a CD loaded with software, projects and exercises to support courses using a number of tools \* A new interior design presents defined terms in the margin for quick reference \* A new feature, Understanding Program Performance focuses on performance from the programmer's perspective \* Two sets of exercises and solutions, For More Practice and In More Depth, are included on the CD \* Check Yourself questions help students check their understanding of major concepts \* Computers In the Real World feature illustrates the diversity of uses for information technology \* More detail below...

*Engineering of Scintillation Materials and Radiation Technologies* Mikhail Korzhik, Alexander Gektin, 2019-09-13 This proceedings book presents dual approaches to examining new theoretical models and their applicability in the search for new scintillation materials and, ultimately, the development of industrial technologies. The ISMART conferences bring together the radiation detector community, from fundamental research scientists to applied physics experts, engineers, and experts on the implementation of advanced solutions. This scientific forum builds a bridge between the different parts of the community and is the basis for multidisciplinary, cooperative research and development efforts. The main goals of the conference series are to review the latest results in scintillator development, from theory to applications, and to arrive at a deeper understanding of fundamental processes, as well as to discover components for the production of new generations of scintillation materials. The book highlights recent findings and hypotheses, key advances, as well as exotic detector designs and solutions, and includes papers on the microtheory of scintillation and the initial phase of luminescence development, applications of the various materials, as well as the

development and characterization of ionizing radiation detection equipment. It also touches on the increased demand for cryogenic scintillators, the renaissance of garnet materials for scintillator applications, nano-structuring in scintillator development, trends in and applications for security, and exploration of hydrocarbons and ecological monitoring.

Why buy a book you can download for free? First you gotta find it and make sure it's the latest version (not always easy). Then you gotta print it using a network printer you share with 100 other people - and its outta paper - and the toner is low (take out the toner cartridge, shake it, then put it back). If it's just 10 pages, no problem, but if it's a 250-page book, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. An engineer that's paid \$75 an hour has to do this himself (who has assistant's anymore?). If you are paid more than \$10 an hour and use an ink jet printer, buying this book will save you money. It's much more cost-effective to just order the latest version from Amazon.com This book is published by 4th Watch Books and includes copyright material. We publish compact, tightly-bound, full-size books (8 1/2 by 11 inches), with glossy covers. 4th Watch Books is a Service Disabled Veteran-Owned Small Business (SDVOSB), and is not affiliated with the National

*Questioning Bodies in Shakespeare's Rome* Maria Del Sapio Garbero, 2010  
Ancient Rome has always been considered a compendium of City and World. In the Renaissance, an era of epistemic fractures, when the clash between the 'new science' (Copernicus, Galileo, Vesalius, Bacon, etcetera) and the authority of ancient texts produced the very notion of modernity, the extended and expanding geography of ancient Rome becomes, for Shakespeare and the Elizabethans, a privileged arena in which to question the nature of bodies and the place they hold in a changing order of the universe. Drawing on the rich scenario provided by Shakespeare's Rome, and adopting an interdisciplinary perspective, the authors of this volume address the way in which the different bodies of the earthly and heavenly spheres are re-mapped in Shakespeare's time and in early modern European culture. More precisely, they investigate the way bodies are fashioned to suit or deconstruct a culturally articulated system of analogies between earth and heaven, microcosm and macrocosm. As a whole, this collection brings to the fore a wide range of issues connected to the Renaissance re-mapping of the world and the human. It should interest not only Shakespeare scholars but all those working on the interaction between sciences and humanities.
